

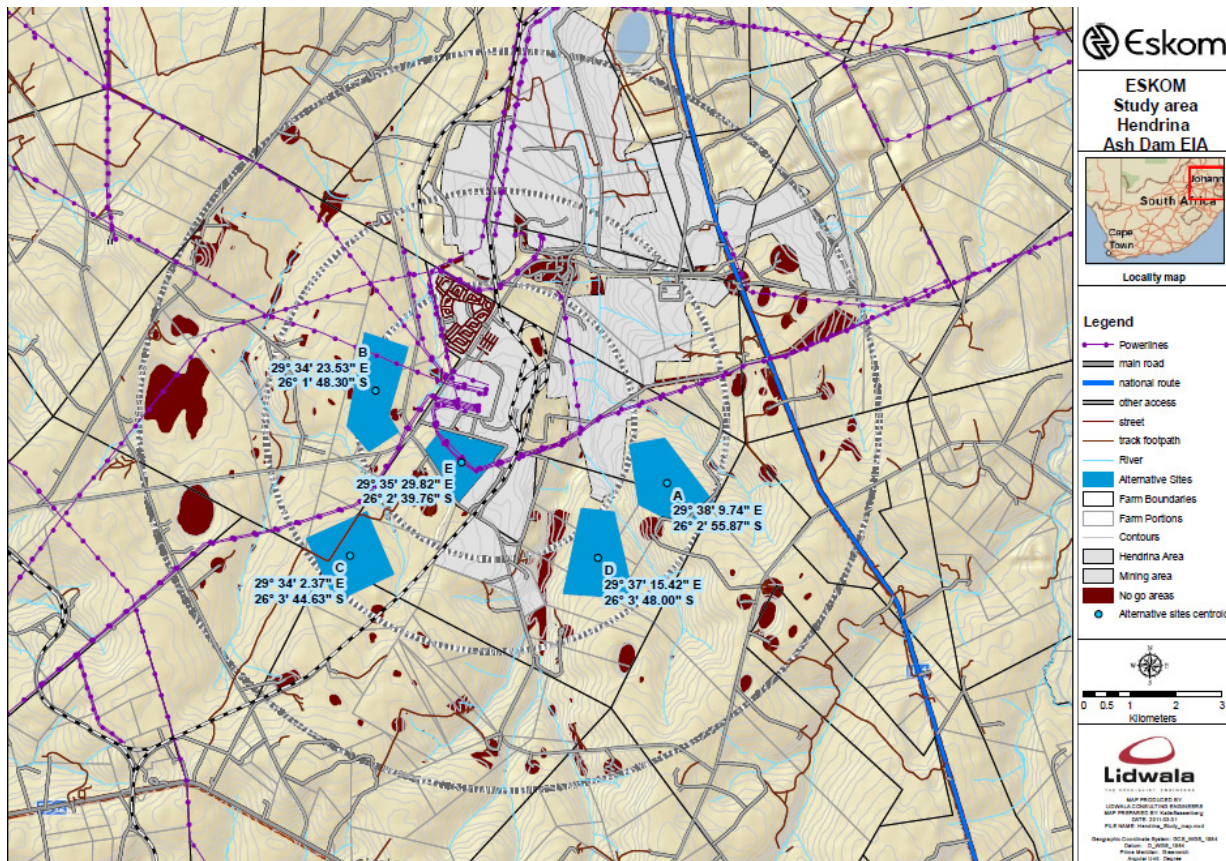

**Figure 4.15:** Recommended alternative sites (sensitivity map with the adjustment factors with cost)

**Figure 4.16:** Five Alternative sites for further consideration during the Scoping Phase

## **4.5 Conclusion**

This chapter discussed the methodology of how the proposed suitable site alternatives were identified. This report will discuss the five alternative sites identified during the screening phase, in order to identify the most preferred site/s that will be discussed and assessed in greater detail during the EIA phase of the project.

Mitigation alternatives will also form part of the EIA phase, during which a more in depth study will be undertaken as to the optimal mitigation of all potential significant environmental impacts.
