

# Power from coal

## Presented by Lethabo Visitors Centre

Due to the pandemic our Visitors Centre is closed to the public, however that does not prevent us from visiting you!

We would be happy to present the story behind the switch through tailor-made, in-depth talks, **either online or at your school.**

Information shared is aligned to the school curriculum and covers topics such as; why loadshedding is necessary, Eskom's various power stations and energy sources, with specific focus on coal-fired power stations as well as the national grid and how it operates.

Lethabo Power Station produces 3 708 megawatts (6 X 618MW) and is situated on the border between Gauteng and Free State.

Presentations can be done via Microsoft Teams or Zoom.

We are fully compliant with COVID-19 protocols.
