Dr Mark Berry  
Resource Ecologist

PO Box 29, Swartwater, 0622  
Tel: 014 767 1187; 082 872 4397  
Email: mark@mmabolela.co.za

Owner of Private Nature Reserve and Natural Heritage Site – Mmabolela Estates – situated on the Limpopo River comprising the farms Duplessis 18MR, Umzumbi 21MR; Weederdooper 55MR & Tuli 56MR

Also representing (Deputy-Chairman) Limpo-Kwena Wildlife Organisation which is an organization made up of Limpopo river farmers concerned with wildlife issues – primarily hippo conservation - along the Limpopo River between the Lotsane and Mogalkwena rivers.

**COMMENTS AND CONCERNS**

**1. Process**

The process in terms of recognized EIA practice has not been followed. Eskom have conducted their own screening and feasibility studies and identified the Waterberg coalfields as the most viable option based on a number of undisclosed criteria. These criteria included “the availability ...of resources .... such as water” and “environmental acceptability”. The basis of any EIA process is the assessment and evaluation of alternatives, including the “nil project” alternative. Eskom should have submitted their screening and feasibility studies to independent assessment and public review. At the very least they should provide a matrix of the various criteria, how these scored for each site, and how it was concluded that resources were adequate and environmental impacts were acceptable. To quote Mr Volk - “There were no fatal flaws identified during environmental screening.” In effect, Eskom have unilaterally concluded that the Waterberg Coalfield is the preferred site and the process is now one of mitigation – not assessment.

**2. Time lines**

Based on the information provided at the meeting, it would appear that the scoping exercise would be completed by end July (affected landowners will be advised in August of preferred site) and that the full EIA, including review and approval, will be completed by year end (“Eskom decision to proceed with be taken in early 2006”)

If an integrated EIA process is to be followed, bio-physical and social baseline studies undertaken, objective assessment made and reviewed, and consultation with IA&P to take place, then this cannot be achieved inside 6 months. A real concern is that Eskom is dictating and determining the timelines in accordance with their own agenda and that this will compromise data collection on the one hand, and independent objective assessment on the other. Floral and faunal studies usually take several seasons, and at the very least, post the summer rainfall season. Until the sites have been identified, comprehensive studies cannot be undertaken. At DWAF's own admittance at the meeting their studies will not be concluded before the end of 2006. How can the EIA process be concluded by the end of 2005?

Bohlweki need to lay out the EIA process timelines in a chart with specific milestones so that everybody can be quite clear as to when the various reports will be completed, time available for review, and by when comments must be received. This should be realistic in terms of ecological assessment and public participation.

### **3. Project description**

One of the difficulties in trying to identify potential impacts is that we do not yet have a detailed project description. The briefing document gives an extremely broad project view (1 page for a R20 billion project) and is focused largely on power supply and the justification for a new power station, and potential sites. If we don't know what the project and associated infrastructure entails, how can the potential impacts be identified, let alone assessed? A detailed project description is a prerequisite for any EIA.

There is a concern that Eskom, despite its claim to the contrary, is in fact not being open or transparent. A pre-feasibility has been completed and probably much of the feasibility study – the plant design must be known, the associated infrastructure and services such as pipelines, conveyors, transmission lines, roads etc. must at the very least be in the concept phase, if not already detailed – yet none of this has been revealed.

Water is a case in point. Eskom know what the water requirements are. Proposals are in place to raise the Mkolo dam by 12m (double the capacity), transfer water out of the Crocodile catchment, as well as augment supplies from underground sources. This was stated by Mr Christo van Niekerk, Plant Manager of Matimba, at a recent Local Economic Development Forum at Lephalale, and yet no mention of any of these proposals was made by either Mr Tony Stott or Mr Nigel Volk of Eskom at the public meeting. Eskom is playing its cards very close to its chest – why? In fact Mr Volk only revealed the quantity of water required (3 mil m<sup>3</sup>) following a specific question. One also must question why the capacity of the dam needs to be doubled and additional water sources tapped for only 3 mil m<sup>3</sup>?

#### 4. Water

My primary concern, and indeed that of owners of properties adjacent to the Limpopo river, is what is the impact of additional water impoundment and abstraction on Limpopo river flows?

It would seem from the public meeting and Eskom's own assessment that their focus has been on availability of supply rather than the impact of additional water use. ("The water supply to the power station is just as important to Eskom as is to our neighbours so it is essential to have a good supply" – Mr Volk). Furthermore, Eskom is avoiding the issue by saying that it is DWAF's responsibility to provide the water and manage the impacts thereof. If there was no new power plant there would be no water requirement. In effect Eskom is externalising their environmental impacts which is contrary to environmental best practice which Eskom claim to follow.

According to a recent report (Oct 2003) on the Limpopo River Basin, the natural MAR (mean annual runoff) of the two major (60% of total) tributaries, the Crocodile and Mokolo (Mogul) rivers, has already been reduced by 54% and 44% respectively. Not only has MAR been halved, but current over development of irrigation has resulted in irrigation demand in the Limpopo exceeding supply by 70 000 ha. River flows have been reduced to 40 days or less in a dry year with extended periods (36 months) of no-flow in the Limpopo in recent years. Up until the early 1980's (coinciding with the development of Matimba A) the Limpopo between the Lotsane and Mogalakwena rivers continued to flow right through out winter. Since the early 1980's the annual flow has declined to the extent that the river now only flows during periods of above normal rainfall and is dry for months on end. As a consequence, the Limpopo ecosystem has been seriously impaired and riparian and aquatic communities are in serious decline. Any additional extraction from, or increased impoundment of the Crocodile or Mokolo rivers will further exacerbate an already overstressed ecosystem. There needs to be less abstraction and impoundment if the flows in the Limpopo are to be restored and decline halted. The EIA must address the impact of current and proposed increased water extraction and impoundment on downstream flows in the Limpopo River relevant to the original natural flow. Has the ecosystem been identified as a user and what provision is made for ecological releases as required by the Water Act?

Furthermore, there are several SADC Protocols, Permanent Technical Committees and Water Commissions established by South Africa, Botswana, Zimbabwe and Mozambique for the management of shared water resources namely the Limpopo. Have these committees been notified and sanctioned the proposed water abstraction and impoundment?

The assessments will be made with historical data (river flows, rainfall, MAR, etc). Recession curves show that periods of no-flow have an increase in gradient over the last decade. Consequently, what was normal in the past may not be normal in the future. Will modeling be done to take into account anticipated impacts of global warming and decline in rainfall over the next 50 years (life of plant)?

## **5. Conflicting interests**

I have a concern about objectivity and independency with Eskom and DWAF. Eskom (as stated at the meeting) are a government organization and they are asking another government organisation, DWAF, to provide them with water. It is akin to asking the fox to look after chicken run. Both organizations primarily represent the government's interests. How can we be sure that DWAF's assessment will be independent and objective and focused on what is best for the resource (water) as opposed as to what is best for another government department? Can DWAF be both player and referee? If process was to be correctly followed, then DWAF should subject their proposed plans for increased water supply to an EIA, expert peer review, and public participation and scrutiny.

## **6. Cumulative impacts**

A further concern is that of cumulative impacts. Firstly, the EIA should cover the cumulative impacts of Matimba A (which was pre ECA of 1989 and probably never subject to an EIA) and both Phases 1 and 2 of the Matimba B project to a maximum of 4800 MW. Secondly, the new power station will require expansion of the existing coal fields and/or development of additional coal fields. This was acknowledged at the meeting. However, this is not part of the Environmental consultants brief and we were told that Kumba Resources would conduct a separate EIA for this project. It is imperative that the cumulative impacts of knock-on projects arising out of the development of Matimba B be included in the EIA for the proposed power station and not be addressed in isolation. Again using the example of water, the new coal mine will have a water requirement, as will associated domestic supply, secondary industries, etc. Are there any other major projects anticipated in the future that would further increase the demand for resources, e.g. housing?

## **7. Competency**

A number of organizations have been engaged to conduct specialist studies and one assumes that these organizations have the necessary expertise and experience to meet the requirements for a detailed and comprehensive EIA. As already noted my particular concern is sustainable flow in the Limpopo River. The listed consultants for surface and sub-surface water are Groundwater Consulting Services which would suggest their expertise is in securing groundwater supplies rather than ecological impacts on riparian and aquatic systems. Can we be assured that hydrologists, with ecological as opposed to geological expertise, have been included in the specialists?

**Attention: Ashlea Strong**

Please find attached my comments of the Environmental Scoping Report for the proposed new coal-fired power station at Lephalale.

Yours Sincerely

Mark Berry

**ENVIRONMENTAL SCOPING REPORT FOR THE PROPOSED  
ESTABLISHMENT OF A NEW COAL-FIRED POWER STATION (MATIMBA  
B) IN THE LEPHALALE AREA, LIMPOPO PROVINCE**

**COMMENTS ON THE ESS REPORT**

Dr Mark Berry  
Resource Ecologist

PO Box 29, Swartwater, 0622  
Tel: 014 767 1187; 082 872 4397  
Email: mark@mmabolela.co.za

1. The Environmental Scoping Study focuses (understandably) on local impacts and insufficient attention or weighting is given to regional impact of the proposed development, specifically with regard to water supply and increased water demand.
2. While the report acknowledges that the new power station will have significant impacts and that an EIA is required, it does not list the specific areas to be addressed in the EIA. The conclusions suggest the EIA will be largely site specific. The EIA should also address impact of increased water use with respect to regional availability and current demand.
3. Section 6.5 Surface Water Hydrology (p77) It is acknowledged that there is insufficient water to meet the requirement of the Reserve (as required by the National Water Act) and that there is insufficient water to maintain the current balance of demand and supply. Furthermore, it is noted that "The supply of additional water from the already stressed (Mogol River) catchment *may* have an *indirect* impact on downstream surface water users." In my view, it is not a question of *may* – there definitely will be a negative impact and it will be *direct* (not indirect) on both downstream users and for the ecological reserve.
4. The issue of water supply is not viewed as part of the Matimba-B project – "Should an additional power station be built, then the demand on the dam will be increased and DWAF will be required to provide an assured supply" (p79). It would seem that the view of Eskom is that water supply is detached from the project and that DWAF must ensure that Matimba-B gets its required water supply, irrespective of the environmental impacts. If there was no power station there would be no increased demand. The supply of water is part and parcel of the Matimba-B project and should form part of the EIA (see points 5 & 6 below).
5. "Only the upper Lephalala River and Mokolo River have significant potential for surface water development" (p79). This contradicts several statements in the report (p77 see above & p79 para 3) that state the Mokolo system is already

overstressed. Furthermore, any water development in the Lephalala river would negatively impact on the ecological water requirements of major conservation areas in the Waterberg (Lapalala, Touchstone, Kwalata).

6. Section 6.5.4 The report concludes (p82) that water could be obtained from the Crocodile and Marico catchments yet these two catchments, like that of the Mogol, are already overstressed. Furthermore, while the current capacity of the Mogol dam ( $146 \times 10^6 \text{ m}^3$ ) is less than the mean MAR ( $240 \times 10^6 \text{ m}^3$ ), the proposal to raise the height of the dam wall will increase the capacity to  $303 \times 10^6 \text{ m}^3$  which will be some 26% more than the mean MAR. Both the above augmentation schemes will have serious impacts on downstream users in those catchments as well as the Limpopo River and these should form part of the EIA of the proposed new power station.
7. No reference is made to the cumulative impact of the proposed new power station. Any comprehensive EIA should access the current impacts of Matimba-A in conjunction with the anticipated impacts of Matimba-B (Phases 1 & 2)
8. It is imperative that the cumulative impacts of knock-on projects arising out of the development of Matimba-B be included in the EIA for the proposed power station and not be addressed in isolation. The new power station will require a new coal mine which in turn will have a water requirement, as will associated domestic supply, secondary industries, etc. Furthermore, the recently announced intention to exploit the Waterberg coal fields in Botswana will increase the demand for resources.

In summary

- The water supply for the new power station should be an integral part of the EIA and not relegated to DWAF
- The EIA should evaluate impacts at the regional level, not just at a site specific level.
- The EIA should access the cumulative impact of the Matimba-B as well as the knock-impact of other projects that will be required to support the new power station viz. new coal mines.

**DATE:** 28 October 2005

**RE: REVIEW OF SCOPING REPORT:**

**ENVIRONMENTAL SCOPING REPORT FOR THE PROPOSED  
ESTABLISHMENT OF A NEW COAL-FIRED POWER STATION IN THE  
LEPHALALE AREA, LIMPOPO PROVINCE**

---

A request was received on 18<sup>TH</sup> October from the EIA section to give comments on the proposed establishment of a new coal-fired power station in the Lephalale area, Limpopo Province.

1. **Attachments:**

The following report was received, namely  
Scoping report: Environmental Impact Assessment for the proposed establishment of a new coal-fired power station in the Lephalala area, Limpopo Province (Draft Report, 3 October 2005)

2. **Methodology:**

The scoping report was viewed over two days in order to obtain a holistic overview of the development, and in order to identify possible negative impacts on the environment. My comments will be given in brackets.

### 3. Issues of importance

#### 3.1 The need and justification of the project (1.1, pages 1 & 2)

Eskom undertook an ISEP process to identify the most feasible option for a power station. Matimba was identified as the most feasible option.

*(No documents containing results of the study are available, and it is not sure if a holistic approach, including southern African states, was taken. No reference to the ISEP process is given/ or alternative sites.)*

Chapter 2.2, 3<sup>rd</sup> paragraph: The scoping report only deals with alternatives in the Lephalale area, and does not evaluate any other power generation options of other areas.

*(To my mind this is not a holistic approach. Alternative areas should be evaluated as a group?).*

#### *Chapter 2.3*

*(Decision making through the ISEP process should be transparent and information about alternative sites should have been included in order to evaluate the decision-making process).*

See also statements in chapter 2.2.1 paragraph 3 “without the new proposed coal-fired power station in Lephalala.....alternatives and paragraph 5. “Without the implementation of the project, the electricity network will not be able to function at full capacity”.....potentially negative impacts on economic growth and social well-being.

*(One gets the impression that management already decided to establish the plant in Lephalale and abandon alternative areas).*

*(Important to note that the National Environmental Management Act (Act No 107 of 1998) mentioned sustainable development that “implies meeting the need of the present generation without compromising future generations” The act also makes provision for protection of the environment).*

### 3.2 Overview of the proposed project (1.2, page 3)

The capacity is estimated at 4 800 MW. Dry-cooled technology reduces the amount of water consumed and approximately < 0.2 liters of water per unit sent out

*(The critical question about water need is vague. What amount of m<sup>3</sup> of water is necessary for the operation per annum?)*

### 3.3 The proposed Matimba B Power Station (2.1, page 5)

The power station will monitor emissions to air on a continuous basis.

*(A Risk assessment is necessary).*

### 3.4 Feasible Technology Alternatives (Chapter 2.5)

Cooling technology such as dry-cooled is proposed as a result of limited water supply in the Lephalale area

*(Again the utilization of water is expressed as < 0.2 l/kWh...approximately 1.5 liters of water per unit sent out. In principle the technology will assist with water conservation but not necessarily meet the environmental requirements and subsequent water conservation needs. This can only be true if a sustainable amount of water is available. Again the total volume of water required to determine the extent is not indicated).*

### 3.5 Groundwater (Chapter 5.5.2)

The groundwater potential is limited. See also Chapter 6.4.3 (Groundwater use)

*(I presume water abstraction as a resource for Eskom's activities is thus not an option and the power station would thus be dependable for water from other resources).*

### 3.6 Water users (5.5.3)

Paragraph 2. "Currently the water availability and water use are in balance". Provisions in the Water Act as stipulated in the National Water Resource Strategy, there is a need to meet the water requirements of the Reserve (Basic human needs and Ecology). Water demands will increase with new developments.

Services (Chapter 5.7.8) A very high percentage of communities in the Limpopo province are still below 50% of RDP standards in terms of water supply; Waterberg district about 48 000 households do not have access to water 98% of the time; In Lephalale Local Municipality, one third of households do not have access to water in the dwelling or yard.

Chapter 6.5 (Surface water hydrology- page 77, paragraph 6: Taking the requirements into account, there is insufficient water to maintain the current balance and “the supply of additional water from the already stressed catchments may have an indirect impact on the downstream surface water users”. See also paragraph 3, page 79; the potential surface water is nearly fully developed (the scheme is stressed) with major dams and a host of smaller dams in the area.

#### Chapter 6.5.1) Current surface water supply

Matimba Power station (7.3 million m<sup>3</sup>/ year)

Grootgeluk Cole Mine (9.9 million m<sup>3</sup>/ year)

Lephalale and adjacent urban users (1 million m<sup>3</sup>/ year)

Irrigation (10.4 9 million m<sup>3</sup>/ year)

*(DWAF indicated that the current system was already stresses and that there are no additional volumes of water available from the Mokolo Dam).*

*(This statement is contradictory to above mentioned statement (3.6) which indicates that the water usage and availability is in balance).*

*(If Matimba power station uses 3.3 million m<sup>3</sup>/ year and the allocation is 7.3 million m<sup>3</sup>/ year, then there will be a surplus of 4 million m<sup>3</sup>/ year, that could potentially be used by the new mine. – See Chapter 6.5.1.*

#### Chapter 6.5.2 (DWAF studies, page 80)

DWAF undertook a series of planning studies that would cumulate in defining the amount of water use and the availability of water namely:

- Verification and validation of study which will be used to determine actual amount water use *(No information available yet)*
- Hydrology study – to determine how much water (yield) is available in the catchments *(No information available yet)*
- Water conservation and water demand Management study – water efficiency *(No information available yet)*
- Pre-feasibility and Feasibility studies for raising the dam wall, or transferring water from other catchments *(No information available yet)*

*(How can the ISEP process select this site on the criteria of availability and accessibility of primary resources such as water (Chapter 2.3, page 8) if the outcome of the studies (DWAF studies, page 80) is not finalized and also to be able to take decisions regarding water quantities and supply, water use and imbalances in the system).*

Chapter 6.5.3 (Possible water augmentation sources, page 82)

The following water supply schemes are considered:

- Supply from the Crocodile and Marico catchment's (45 million m<sup>3</sup>/ annum)
- Raising the dam wall
- Bore fields from the Mogol River with capacity of 30.7 m<sup>3</sup>/ annum

*(The exact water demand for the proposed mine is not yet known as the power station size and type has not been finalized (paragraph 2, page 82). The power station is proposed to operate at an installed capacity of approximately 4800 MW (paragraph 1, page 3). According to design specifications, the dry cooled station would utilize approximately < 0.2 liters of water per unit send out (paragraph 4, page 3). I cannot see why estimation cannot be given).*

*The First power plant at Matimba has a capacity of approximately 3600-388 MW and needs 3.3 million m<sup>3</sup>/ annum of an allocated 7.3 million m<sup>3</sup>/ annum. Will the proposed power station, which is designed to conserve water, not use less than 4 million m<sup>3</sup>/ annum?*

*The fact that alternative resources areas have been investigated, suggests that a larger amount of water will be needed for the operation of the power station.*

*Additional water supply from the Crocodile, Marico catchments, and water abstraction from the Mogol area is not that simple as the entire Limpopo System downwards is also dependant on water from these systems. In fact shortages already exist especially during the dry period and water for human use, mining and agriculture increased).*

### 3.7 Ambient hydrochemistry (Chapter 6.4.4)

Limited data indicates elevated concentrations of dissolved solids of Sodium, Chloride, Sulphate and Calcium which exceeds maximum levels on the farm Nooitgedacht

*(These farms (Table 6.3) do not form part of the study area. Furthermore, although a large number of monitoring boreholes occur on the present site of the Grootgeluk mine and Matimba power station, no monitoring results with regard to the ambient hydrochemistry are showed. The surface drainage is north eastwards (Figure 6.11) and I would like to know what the risks are with persistent pollutants and what will Eskom do to prevent such pollution).*

### 3.8 Power station monitoring (Chapter 6.6.3)

Monitoring showing some degree of groundwater quality deterioration (paragraph 6, page 84). A contaminated plume has been identified which migrates to the northeast (paragraph 7, page 86)

*(With the proposed power station in operation it is believed that this type of pollution will probably increase. North east is the drainage direction of the Limpopo River. What actions will be put in place in order to stop this type of groundwater pollution? The cumulative effect of groundwater pollution is a matter of concern and risk assessments are required).*

### 3.9 Ecological sensitivity (Figure 7.2, page 118)

The farm Nelsonskop 464 LQ is classified as sensitive and is briefly discussed. It has a low suitability for the proposed development (Page 135, Figure 7.3).

*(Why then develop the sewage works on the farm Nelsonskop- Does it mean no EIA was carried out during 1987)*

*(I agree with the recommendations (Chapter 7.9)*

## 4. Findings

The key issues in my opinion can be summarized as follows:

- The ISEP process of Eskom is not available for scrutinizing. One of the issues that make this proposed power station feasible was based on the availability of the water resources.
- Water however, is not that available and although it was noted that the present situation is in balance with the present need, further information from DWAF suggests that there is not sufficient water for the new development and that the water system is already under pressure. Studies undertaken by DWAF to address alternatives ways of water management have not been finalized.

It is still not sure what the water demand will be. The water source from the Marico and Crocodile Rivers is potential yield that depends on

climatic conditions as well as existing water use for human, industry and agriculture in the entire system. According to the permits, large amounts of water are abstracted from the Crocodile River or boreholes. This is a legal operation according to the approved permits from the Department of Water Affairs.

**The total amount of water abstracted by all land users of the Crocodile River, however, is a matter of concern, as the minimum flow requirement is affected by this amount of water abstraction. This is applicable to all water users in the catchment.**

- The same applies to water abstraction from the Mogol River. Allocations of water cannot be made without a system approach. At present, indications are that the water reserve is not enough to fulfill the basic needs of the river ecology.
- Pollution of groundwater is taking place and will increase with an increased capacity of industrial needs. Although monitoring is essential it is not clear what will be done to prevent or mitigate this pollution of ground water, which will have a cumulative effect on the water resources.

**5. Recommendation**

A sound decision cannot be made without all relevant information. Based on the present information the critical issue is water availability.

It is recommended that Water Affairs first finalize their studies on the water management and conservation in the Limpopo River system. The minimum flow requirements to meet the needs of the river ecology should be firstly determine before allocations of water can be made.

A holistic approach id needed to comply with the National Environmental Management Act (Act No 107 of 1998) and the National Water Research Strategy to meet the requirements of the water reserve (Basic human needs and ecology).

**Ms. Lisa Bothma**

Chief Director: Environmental Impact Management  
Department of Environmental Affairs and Tourism  
Private Bag X 447, Pretoria, 0001  
FAX: 012 320 1167

**Regarding EIA and Pre-feasibility Studies on Matimba B**

Dear Ms Bothma,

This letter refers to the Environmental Impact Assessment (EIA) of Eskom's proposal to build a new coal-fired power station that will produce 4800 MW of power in Lephalale, Limpopo.

A key stakeholder meeting, organized by Bohlweki Environmental, was held on 27 June 2005 at the Eskom Convention Centre to brief Interested and Affected Parties on the project. The briefing paper on the project dated June 2005 indicated that a pulverized fuel (PF) combustion technology will be used for electricity generation.

Our concern is that with a proposed lifespan of 50 years, a coal-fired power station of this magnitude and which does not use best available technologies, will have far greater negative impacts on the environment than a range of alternatives, including Integrated Gasification Combined Cycle (IGCC) which could be up to 30% more efficient than the technology currently proposed by Eskom, i.e. above 25% reduction of all emissions on efficiency alone. IGCC is also more compatible with further reductions of local air pollution and climate change mitigation than PF technology, due to the separation of various pollutants during the gasification process.

While the above fully justifies a requirement by DEAT that alternative technologies be considered within the IEA process, it is also worth noting that the use of IGCC, which has been commercially demonstrated, would be more compatible with regulations and other measures being contemplated in the Environmental Fiscal Reform process being undertaken by National Treasury, as well as standards promulgated in terms of the Air Quality Act. Since fuel costs constitute a smaller proportion of

electricity generation costs than with PF technology, there will be less risk of the power station insisting on exemptions from future regulation on the grounds of rising fuel costs.

At the key stakeholder meeting, Earthlife Africa (ELA) raised a number of questions on the project, especially with regards to the choice of Eskom to use pulverized fuel technology. We believe that alternative technologies must be considered as part of the scoping process, as is required by the EIA regulations. ELA requested copies of the pre-feasibility studies and were informed that the project team would consider which sections of the report would be made publicly available. To date, we have not received any copy nor part of the pre-feasibility report nor response to our request.

ELA would like to see a range of alternatives considered within the EIA process, including independent assessment of the technology options. As a minimum, we request that DEAT insist that the pre-feasibility studies for this project (with motivation for any and all excisions of proprietary information) be included in the EIA Draft Scoping Report, due for release in September 2005.

Yours truly,

BOHLWEKI ENVIRONMENTAL  
FAX: 011 466 3849

**Submission on Matimba B Power Station EIA Processes**

This is a resubmission of our expressions of concern. These concerns were expressed at the key stakeholder meeting 27 June 2005, as well in writing, but subsequently enquiries suggest that the written record is not in the position of Bohlweki.

Our immediate concern in regards to the proposed 4800 MW Matimba B Coal Fired Power Station is to ensure that electricity generation technology alternatives are considered before any decision is made on the choice of technology to be used at the power station.

**Main concerns**

Earthlife Africa Johannesburg, as an Interested and Affected Party, is concerned that the proposed 4800 MW Matimba B Power Station, with pulverised Fuel Technology and a life span of 50 years, will have far greater negative impacts on the environment than if best available technology were deployed.

The project needs to consider alternatives, including Integrated Gasification Combined Cycle (IGCC), which could be up to 30% more efficient than the technology currently proposed by Eskom. Integrated Gasification Combined Cycle could provide about 25% reduction of all air and atmospheric pollution on efficiency alone. IGCC is also compatible with further reductions of local pollution and climate change mitigation than Pulverised Fuel Technology, due to the separation of pollutants during the gasification process.

It is not acceptable for Eskom to put forward only one technology option on the basis of pre-feasibility studies that it is keeping out of the public domain.

Earthlife Africa considers it a legal requirement of the EIA regulations that alternative technology must be considered, including independent assessment of the technology options as part of the Scoping process.

Other issues that Earthlife Africa Johannesburg submits should be addressed in the Scoping Report include:

- Projections of total water usage in the Matimba B Power Station and associated coal mining activities, including water requirements for pollution remediation activities that may be considered as a future option to meet air quality standards (e.g. scrubbers);
- Full analysis of any constraints on the qualities of coal that could be used as fuel, associated with different technology options,
- Comprehensive analysis of the net energy balance of the proposed project - i.e. total energy input against output - and thus the overall energy efficiency of operation.
- An account of the assumptions that have been made about the future pricing of coal and electricity, e.g. in the financial feasibility study, indicating at least the range of prices assumed over the lifetime of the project.
- The stated reserves of the local coal mine compared to total consumption of coal over the project lifetime?

Yours for a just transition to sustainable energy

In assosiasie met M P van Staden Prokureur

**Bohlweki Environmental****MATIMBA B**

Skrywer is 'n prokureur op Lephale (Ellisras) en spesialiseer in die wildbedryf. 95% van my inkomste word verdien deur kommissie op die verkoop van wildplase. My kliënte is meestal afwesige grondeienaars woonagtig aan die Rand en in die Buiteland.

Getallegewys is dit min mense maar dis die swaargewigte van die land se ekonomie en ek beveel aan dat u ernstig luister na dië tipe mense se sienings. Ek verteenwoordig nie 'n organisasie nie maar my siening is parallel aan dië van my kliënte.

'n Kragstasie soos Matimba is 'n ernstige onestetiese struktuur en enige eiendom wat daardeur geraak word se markwaarde word negatief beïnvloed - dis nie oordrewe om dit te vergelyk met 'n atoombom wat gegooi word nie! Die negatiewe faktore sluit onder andere in.

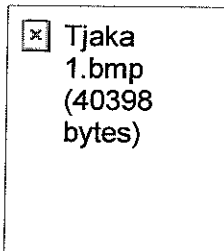

- ✓1. **Onooglik.** Die kragstasie self en die kraglyne wat daarvandaan uitsprei is lelik, onooglik. Enige plaas vanwaar die kragstasie gesien kan word se markwaarde word negatief beïnvloed - tot so vêr as 40 km en meer vanaf Matimba A. Hoe nader aan die kragstasie hoe groter is die negatiewe invloed. 'n Plaas se waarde word verlaag bloot deur die feit dat jy verby so 'n lelike struktuur ry op pad na die plaas - byvoorbeeld plase op die grondpad verby Matimba A.
- ✓2. **Klank.** Jy sit op 'n Bosveldplaas en kyk in die stilte van die nag na die helder sterreprag. 'n Jakkels skree. In die agtergrond is die aanhoudende gedreun van die kragstasie - wat 'n *passion killer!* Hierdie probleem word ondervind tot 30 km vanaf Matimba A.
- ✓3. **Reuk.** 'n Stinkbom reuk word dikwels wind-af geruik. Dit veroorsaak ook vinniger roes van drade.
- ✓4. **Bevolkingsdruk.** Verhoogde bevolkingsdruk verlaag die waarde van landbougrond weens probleme met wilddiefstal en morsigheid.

In u verslag wil ek graag sien dat die volgende punte ondersoek is en ek wil goeie redes sien waarom hierdie argumente nie lewensvatbaar is nie:

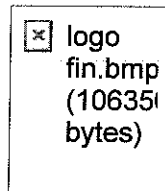

1. Bou die kragstasie in 'n gebied wat reeds besmet is, bv in Gauteng, en verskeep die steenkool per trein daarheen alternatiewelik
2. Versink die kragstasie sodat slegs 'n gedeelte van die skoorsteen uitsteek.

Indien een van bogemelde opsies nie lewensvatbaar is nie wil ek u versoek om u tweede atoombom te gooi so na as moontlik aan die vorige een. Bou verkieslik die twee kragstasies so na moontlik aan mekaar of bou Matimba B so na moontlik aan die dorp, verkieslik tussen Ellisras en Marapong. **Ek smeek u: bou Matimba B op Nelsonskop.** Bly asb weg van die blok Naauw Ontkomen, Eenzaamheid, Kromdraai, Kuipersbult - dit sal die vieslikheid 'n verdere 10 km wes skuif!

Registreer my asb op u databasis en stuur vir my verslae per e-pos of skilliepos.

**If you are the property owner of a farm in the area, please state the farm name, farm number and portion number, as well as the type of farming activity being undertaken: N/A.....**

**1. What is your main area of interest with regards to the proposed project?**

1. We are the holders of a prospecting permit for gas on numerous farms in the area, including on the farms Droogeheuvel 447LQ, Zongezien 467LQ, Appelvlakte 448LQ & Nelsonkop 464LQ, which are amongst the proposed sites for the power station and ancillary infrastructure. These farms form part of our pending application for conversion to an exploration right in terms of the MPRD Act.

2. We are currently engaged in the pilot operation of a Coal Bed Methane production trial as well as ongoing exploration and drilling activities for gas in the area. We also hold prospecting permits for coal on several farms in the area, which we intend to commercialize in the future. We therefore have a commercial, environmental and general interest in all developments with potential impact on our projects.

**2. Do you have any points of concern or support regarding the proposed project?**

**YES**

**If "yes", please briefly list these in point form:**

1. The impact of the power station's proposed development on future exploitation of Coal Bed Methane on the same site needs to be clarified.

2. We wish to ensure that our potential future projects are not negatively affected by the power station development. We therefore wish to remain well informed of all activities.

**3. Are there any additional stakeholders who you feel should be consulted with regards to the proposed project?**

**NO**

**If "yes" please list their names and contact details below:**

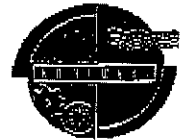

Whilst not being additional stakeholders (as they also form part of AOL - Anglo Coal Division), please could you add the following Interested & Affected Party to your mailing list:

COMMENT re PUBLIC OPEN DAY HELD AT LEPHALALE 28 JUNE 2005

C.J.E.Lane.  
Lungile Game Estates. Swartwater.  
E-mail chrislane@iafrica.com

The following comments address my concern for the environment in general, but primarily my concern with regard to the sustained flow of water in the Limpopo River and the effect the proposed new coal fired power station in the Lephalale area will have on it.

1 Eskom apparently know that its water requirement is 3 mil cubic meters. Kumba is however conducting its own separate study about which precious little is known. Even Eskom seem unaware that DWAF, which, we are told, is at present undertaking studies as part of the Kumba initiative, will not have completed their assessment before the end of 2006. Only then will Kumba know if it may proceed. A DWAF representative put the question at the meeting on the 28th, and I quote "....are you prepared to wait?" I noticed that there was no direct response from Eskom to this question. Despite this however, we were told that the "Eskom decision to proceed will be taken in early 2006".

2 This begs the question, what environmental study/studies are in fact being made and by whom? Presuming a full study is planned, taking into account all factors i.e. water loss due to evaporation since the proposed doubling of the capacity of the Mokolo dam will presumably greatly increase the surface area, to mining, to housing and domestic use as well as all the other factors associated with the proposed expansion? Most specifically however, will this also include a forecast or model predicting the effect on the flow of water into the Limpopo river downstream, as well as how the ground water-table in the immediate 200 kilometer long effected area below the dam may be reduced over the next 20 years or so. I stand to correction but I don't identify any major tributaries of the Limpopo downstream the Mokolo/Limpopo confluence, other than the Palala, which is very sporadic, until one reaches the Mogalakwena and the Shashi situated at about 200 km. It strikes me that our neighbors in Botswana should also have cause for alarm, what has been their response?

3 What plans are there for the return water from mining i.e. waste water, what percentage of the draw-down will this be and will this be treated and returned to the dam or released down stream? Is the plan to release it beyond some other drainage divide?

4 Since the initial building of the Mokolo dam, the water flowing in the Limpopo past my farm has reduced considerably. I don't think I exaggerate if I say that this area has been adversely affected. It would be interesting to compare the original study, if one was made, and its predictions, to how things actually are today. Did the experts get it right?

5 I've always had a problem with the definition of the word "expert". It seems to imply that an individual or individuals so classified cannot make mistakes. The truth is they can and do, no disrespect to any such person or persons so classified in this instance. However, this inevitably causes me concern specifically should interested parties be excluded from the decision making and planning on this proposed project, particularly where critical

decisions are to be made. Will this concern be addressed, if not, why not, if so, how?

6 One can't help but get the impression that the decision to proceed with Matimba B is already made and that plans are already fairly advanced. If this is indeed the case, what happens if the experts do indeed "mess up"? Is it just, tough luck, deal with it, or will there be some sort of compensation agreement? Notwithstanding that no compensation could ever be considered truly adequate if things really went wrong.

7 I find it ironic that a province which takes its name from this river, indeed recently changed its name in honour of the river, now, almost before the ink is dry, so to speak, would seek to gamble with its future. None of us want to stand in the way of progress but this is a major issue and one that affects more than just a handful of farmers downstream. We must get this one right!

9 I have to believe that all right minded and responsible South Africans, indeed all right minded people, irrespective of who or where they are in this world, hold true to the principle that, the earth is something you protect every day of the year, and a river is something you defend every inch of its course. We must never neglect that principle. We are judged only by the future.

Sir,

**RE: HENNIE HILLS FAMILY TRUST : FARM VERGULDEHELM 321 LQ**  
**NORTHERN PROVINCE, LIMPOPO PROVINCE**

We act on behalf of Mr. H. Hills in his capacity as trustee of the Hennie Hills Family trust, duly authorised thereto, which is the registered owner of the farm Verguldehelm no. 321 LQ, Limpopo province.

We have been advised that you are the duly appointed consultant by Eskom to assist them in the Environmental impact study regarding the construction of a new coal-fired power station in the Lephalale area, Limpopo province.

We place on record that according to the information that our client's property may be adjacent to this new coal-fired power station and/or some of the ash dams which will detrimentally affect it.

1. Both the Fauna and Flora of the property, which is a game farm, will be negatively affected.
2. The usage as a game farm with the accompanying amenities related thereto will be detrimentally affected and will cause that it becomes a wasteland.
3. The asset rain of the coal-fired power station nearby has already a detrimental affect on the Flora as well as on any metal objects, including the fences, which rusts very quick.

4. The insect, arachnid and other small animals will also be negatively affected.
5. The water level will be detrimental affected.
6. The visual impact is of such a nature that it cannot be mitigated.
7. The sound impact will also disturb a quite and still bushveld area.
8. The ash pollution will cause much inconvenience and will make the grass taste not acceptable for the wild animals.
9. The bird life is also very unique and will cause birds to move.
10. But for the loss of the enjoyment of a bushveld farm, of which this specific one and immediate surrounding farms are of the best in the vicinity, will be lost forever.
11. The reduction in market value of our client's property will also be claimed from Eskom but we are aware that this will be something outside the EMPR.

In the light of the aforesaid our client object against this proposed coal-fired power station on the adjacent areas and we confirm that other alternatives should be further investigated.

Please acknowledge receipt.

Physical Address: 1590 LERATONG STREET MARAPONG EX2  
Town: LEPHALALE Code: 0556  
Postal Address: BOX 4994 ENKELBULT  
Town: LEPHALALE Code: 0556  
If you are the property owner of a farm in the area, please state the farm name, farm number and portion number, as well as the type of farming activity being undertaken:

Please indicate any comments/issues/queries with regards to the proposed project:

AS A CONSTRUCTOR, I FEEL VERY MUCH INTERESTED ABOUT THE PROPOSED NEW Eskom COAL-FIRED POWER STATION PROJECT (MATIMBA B) IN THE LEPHALALE AREA, LIMPOPO PROVINCE BECAUSE: IT IS GOING TO HELP US WITH MANY THINGS LIKE:

HIGH-RATE OF UNEMPLOYMENT

- HIGH RATE OF QUALIFIED PROFESSIONALS NOT WORKING
- HIGH RATE OF YOUNG PEOPLE ON THE STREET WITH NO JOBS
- HOUSE-OWNERS WITHOUT JOBS
- HAUNTING CONTRACTS AND BEING UNDERPAID OR NOT BE WORKING AT ALL.

THIS POWER, WILL BE OUR BENEFIT

Please add more pages if necessary

Town: LEPHALALE Code: 0556

If you are the property owner of a farm in the area, please state the farm name, farm number and portion number, as well as the type of farming activity being undertaken: .....

1. What is your main area of interest with regards to the proposed project?

My main area of interest is Building and construction, welding works and cleaning services and paved areas.

2. Do you have any points of concern or support regarding the proposed project?

YES/NO

If "yes", please briefly list these in point form:

Since Lephale area have high rate of unemployment, this project will create more jobs to Lephale communities as well as neighbouring areas, and this will reduce poverty. This will also be if Air Pollution can taken into consideration.

3. Are there any additional stakeholders who you feel should be consulted with regards to the proposed project?

YES/NO

If "yes" please list their names and contact details below:

*Meermal gebent teen die ganging van die kragstasie  
op Tenzaamheid. Sal restappe neem indien die kragstasie  
daar gegaan word. Die grondwaarde aan versterk dit daar  
as gewote daarvan, asook die estetiese waarde.  
Dit maak ook nie sin om die kragstasie  
en ashope daar te maak met die  
paaie wat daar deur gaan nie. Ons drade  
gaan my meev roes as nou en die  
lug gaan my meev stink as nou.  
Wat van al die nuwe kraglyne?  
Oor wie se grond gaan dit loop?*

1. Wat is u hoofbelang ten opsigte van die projek?

Die omgewing, mense en diere se gesondheid

2. Is daar na u mening, enige punte van bekommernis of ter ondersteuning rakende die voorgestelde projek?

Indien "ja", lys asseblief puntsgewys u kommentaar:

Groot swaakse verbeelding van steenkool beteken besodding. Groot skaal ontginning vermetiging van die Bergom en omgewing (Sien bylae "A" aangeleë)

3. Is daar enige ander mense wat na u mening ook geraadpleeg moet word aangaande die voorgestelde projek?

Indien "ja", verstrek asseblief hulle name en kontakbesonderhede hieronder:

Die totale boere gemeenskap wat betreffe het in die omgewing wat die omstandighede ken

*Heg meer bladsye aan, indien nodig*

- 1) Besoedeling word reeds deur o  
bestaanple dragstasie in die lu  
vry gestel, soos suur en gas  
wat deur verbranding veroorsaak  
word. Dit kan in die omgewing  
waargeneem word, kampoetade roe  
vinniger as in die oopreol, metale  
neem vinniger roes vlakke aan as  
gevolg van die suur neerslag  
Groter en meer verbranding  
beteken groter en meer besoed  
ling wat oor die lange duur  
definitief nadelig gaan wees.  
As voorbeeld kan ons na die  
Vereniging en omgewing kyk.  
Diere word gebreuklik gebore, d  
omgewing en waters is besoed  
Kroon siektes kom meer in d  
areas voor ens.
- 2) Die huidige myn en kragstasie  
veroorsaak reeds 'n gradaas. O  
reol Matin, by "B" na verwag  
so ver van matins die bestaande  
kragstasie gebou word gaan 'n  
groter gebou onder kaustante g  
skurloop. Die totale reakties wat  
wat fans in die omgewing tree  
sal oordonder word.
- 3) Die omgewing is een van sy so  
en word as wereld erfenis ge  
beskou. Sal ons dit besoedel

kan ons dit nie weer herstel  
nie.

4) Die omgewing beslaan oor hepekte  
water bronne waarvan die meeste  
uit boorgate gepomp word vir  
mens en dier gebruik.

Spun die bronne besaai afgesny  
of uitgeput word deur die myn-  
bedryf, daar is nie betrou-  
bare alternatiewe is nie. Dit get  
vir die boere wat deur  
die jare aemmanis bestaan voer

5) Die steenkool myne sal ter set-  
tyd uitgebru word wat opsigtel die  
omgewing verder en vinniger gaan  
ondolwe. Ondergrondse water area

sal oop geskied word. Fase se  
water sal as gevolg mer van  
besoed afgesny of salt uitgeput  
word. Dit kan onmiddellik of oor

n periodes van tyd plaas vind.

Tot myn beter wet het my geen  
myne fabriek van salt speeksel

verand wordde liheid vir die gepen-  
de gevolge aan vaar nie. Sulle

proses gaan in lang rege gedyn  
voarat. In Baie steely stand punt  
moet hier geneem word, ~~prose~~

om kostelose prosese wat onmiddellik  
van oore is, moet reeds in plek wees  
om sulde boere se hulp bronne aan  
te ...

Om saam te vat.

Die bou van Matimba "B" is 'n definitiewe reë. Die kraagstasie kom in 'n reeds besoedelde area gebou word waarop die kool per spoor na die area gevoer word. Dit help om die hele natuurlike skoonheid te behou of selfs dit te besoedel en dan te kyk of om dit kan reg stel nie.

Wat kom volgende Sasol en hulle trawante en een van die dae sit ons met 'n tweede Verreëning. Die natuur mens, diere en ander bewonings wese gaan verskeer hieronder by. Die algemene siening is nie tot afbreuk van die omgewing nie maar tot opbou.

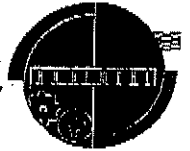

Daar moet ook getyk word nie stof.

To: Bohlweki Environmental

Attention: Me Ashley Strong

Subject: Proposed Power Station development at Lepalale (ELLISRAS)

Dear Me Strong,

I refer to our telephone conversation earlier today. I am writing this letter to express my concern about the effect and the adverse implications that the above-mentioned proposed development will have on my mother and father, Mr & Mrs L.F. Steyn of the Farm Kromdraai should this development be constructed on the farms Naauuw Ontkomen and Eenzaamheid. As you are aware the two properties on which the proposed development is to take place are immediate neighbouring properties to that of my parents. In this regard I would like to put on record the following concerns:

- My parents farm was declared a nature reserve in 1961 and the effect that the proposed development might have on the status of the farm as a nature reserve is of great concern to us.
- As you are aware my parents have been living on this farm since 1958. The proposed development would certainly impact on their life style and quality of life and because of their age (father 84 years and mother 81 years) it would be very disruptive and traumatic for them to relocate.
- The proposed development would certainly have a negative effect on the property value and intrinsic value of my parents property.
- We are concerned about the safety of my parents and their increased exposure to falling victim to attacks and crime as a result of the construction and operational activities immediately next door to them.
- The increased activities would also result in an increase in the traffic and heavy vehicle traffic on the roads crossing through my parents farm. Over and above the increase in noise and dust as a result of the traffic my father's game and cattle will be extremely exposed to poachers and thieves.

- Taking the prevailing wind directions into account it is evident that my parents farm is situated down-wind from the development and the effect of the noise, dust and smoke on their conditions of living and their health is of great concern. The smoke and the dust would also have a knock-on effect on the quality of the grazing on the farm.
- From the reports submitted it appears that no provision is made to create a buffersone to mitigate the adverse effects of the proposed developemt on my parents neighbouring farm.

One aspect that hasn't been addressed is the way in which my parents will be compensated for all this direct negative effects should the development take place on the two neighboring farms.

I trust that you will take the above concerns into account in dealing with this matter.

Regards  
L. I STEYN

Madam,

**RE: OUR CLIENT : MW DE JAGER KINDER TRUST / LANDELANI GAME LODGE / MW DE JAGER SAFARIES / ENVIRONMENTAL IMPACT ASSESSMENT FOR THE PROPOSED NEW ESKOM COAL-FIRED POWER STATION PROJECT (MATIMBA B) IN THE LEPHALALE AREA, LIMPOPO PROVINCE**

---

1.

We act on behalf of our clients Mr MW De Jager in person, his family trust, MW De Jager Safaries, and Landelani Game Lodge.

2.

Our client has handed us a letter addressed to interested and affected parties on the assessment of the environmental impact of the proposed new Eskom coal-fired power station at Matimba B, which is very close to the farms of our respective clients. Our clients' businesses include the breeding of rare species, eco-tourism, safaris and

GROENEWALD VAN DYK INCORPORATED

hunting expeditions. Suffice to say that the proposed power station will have detrimental affect on the businesses of our clients. The area is sensitive and in light thereof, we would like to be made available, all documentation pertaining the environmental impact assessment as well as progress made on the EIA process and any rezoning to be done at the said sites.

3.

With specific reference to your letter dated 12 August 2005, we await the reports of the scope and study as referred to in the said letter as our clients has not been placed in possession thereof.

4.

Kindly at a matter of urgency, respond in order to advise our clients of their rights in this regard.

Yours faithfully,

  
**DEON VAN DYK**

Hoedanigheid (bv. Voorsitter, lid, ens.): W.P.

Fisiese adres: KALKFONTEIN LEPHALALE

Stad: LEPHALALE Kode: 0555

Posadres: Bus 585 LEPHALALE

Stad: Kode: 0555

Indien u die grondeienaar van 'n plaas in die omgewing is, verskaf asseblief die plaasnaam, plaasnommer en gedeelte nommer asook die tipe boerdery aktiwiteit wat bedryf word op die plaas:

KALKFONTEIN LQ 468 Gedeelte 3 + 4 (Bees + Wild)

1. Wat is u hoofbelang ten opsigte van die projek?

Uw private/boerdery doeleindes - geen baat a.g.v. redes  
hieronder genoem - Benadeel omgewing negatief/grondwater

2. Is daar na u mening, enige punte van bekommernis of ter ondersteuning rakende die voorgestelde projek?

Indien "ja", lys asseblief puntsgewys u kommentaar:

JA/NEE

- ① Lug en grond besoedeling - ondergrondse water stof, as, hitte,
- ② Toegangsruimte wat moontlik deur plase mag ontstaan - verminder grondwater verhoog dieftal en rooibos en jagbedryf word negatief beïnvloed + natuurlikheid en sekuriteit.

Sien aangehegte vorm.

3. Is daar enige ander mense wat na u mening ook geraadpleeg moet word aangaande die voorgestelde projek?

Indien "ja", verstrek asseblief hulfe name en kontakbesonderhede hieronder:

JA/NEE

Gedeelte 1 en 2 Van Plaas Kalkfontein - H. de Bruyn en G. Ellis, asook eienaar van gedeelte van Zongesin.

- ③ Uitbreidings verorsaak behuisingprobleme en verorsaak onwettige plakkers wat onstabiliteit in omgewing verorsaak - diefstal, moord, ens. Naburige bose het alreeds in probleem wat eskaleer en dit verorsaak dat boerdery moontlik gestaak <sup>moet word</sup> ~~word~~
- ④ Abnormale geraas en ligte wat boerveld area bedef - jagters wil nie in die "stad" jag nie - Verlies aan inkomste.
- ⑤ Ontwikkelings direk of naby ~~pla~~ Wildsplaas verorsaak dat plaas as wildsplaas sy ~~markwaarde~~ verloor.
- ⑥ Windrigting is ook in Oostelike rigting met tyf en gaan area negatief raak - stof, geraas, gasse, ~~was~~ as en hitte.
- ⑦ NB Geen paarie deur wildsplaas of addisionele verkeer - Dit sal besigheid onmiddellik negatief beïnvloed en eise tot gevolg he.
- ⑧ Sandloop "riviertjie" deur plaas mag nie geblok of besoedel word nie aangesien dit in natuurlike waterloop is wat al jare verkeer plaas grond danne voer
- ⑨ - Ontwikkelings om ~~toerisme~~ te lok ~~sal gestak~~ moet word - Sal nie affek kry  
Urae wat ~~te~~ ook beantwoord moet word
- ① Gasse/rook of stowwe wat in lug ingeblaas word nie verbranding. Wat is die huidige konsentrasie en samestelling van ~~gasse/rook~~ <sup>gasse/rook</sup> en wat gaan dit wees met nuwe Kragstasie?
- ② Word dit ook deur onafhanklike instansies getoets?
- ③ Wat word van die swaer wat in kool is tydens verbranding? Water persentasie word in die lug vrygelaat?
- ④ Verduidelik definisie van "suur" of "giftige" reën - Is dit in verband met "twee" kragstasies en water uitwerking gaan dit he op plantegroei, grond, water, diere ens.
- ⑤ Gooi as wees terug in myn - Daar moet mooggeriebiter word??
