Notes:

(a) In assessing potential reference is made to the frequencies of exceedance of the threshold for mild respiratory effects in addition to the likelihood of exposure – based on the number of persons residing in the area.

**SCENARIO B.1 - Potential for non-compliance, health effects, vegetation damage and corrosion occurring due to sulphur dioxide concentrations**

Notes:

(a) In assessing potential reference is made to the frequencies of exceedance of the threshold for mild respiratory effects in addition to the likelihood of exposure – based on the number of persons residing in the area.

**SCENARIO C.1 - Potential for non-compliance, health effects, vegetation damage and corrosion occurring due to sulphur dioxide concentrations**

Notes:

(a) In assessing potential reference is made to the frequencies of exceedance of the threshold for mild respiratory effects in addition to the likelihood of exposure – based on the number of persons residing in the area.

**SCENARIO D.1 - Potential for non-compliance, health effects, vegetation damage and corrosion occurring due to sulphur dioxide concentrations**

Notes:

(a) In assessing potential reference is made to the frequencies of exceedance of the threshold for mild respiratory effects in addition to the likelihood of exposure – based on the number of persons residing in the area.
