

Green Attributes Programme

Sell your excess energy to electricity distributors and contribute to a sustainable future

Why green attributes?

Green Attributes are the environmental benefits associated with renewable devices.

Green Attributes are the credits, benefits, emissions reductions attributable to a specific generation facility that can reduce conventional fossil fuel generation carbon emissions. Renewable Energy generation facilities will have a positive impact on the environment and climate change.

The Green Attributes Programme is aimed to incentivise embedded generators that have made the change to renewable energy.

Why should I participate?

Participation in the Green Attributes Programme will show your commitment to a sustainable future in reducing greenhouse gas emissions and supporting a cleaner environment. Registered installations in addition to government incentives will also have access to Eskom grid services (i.e. net-billing, wheeling, banking etc.)

As a prosumer or generator, you're already leading the way in renewable energy production. Now take the next step and monetise your excess energy while promoting a cleaner environment. Our program helps you sell your renewable environmental energy attributes to customers, supporting a sustainable future for all.

Who is Eligible?

Prosumers which are customers with registered renewable energy (Solar PV, Wind, Hydro etc.) generation facilities are eligible to participate.

Be part of the growing global transition towards a sustainable energy future. Sell your renewable environmental energy attributes today and inspire others to follow your lead.

- South Africans can contribute to improving global climate change and ensure environmental benefits for current and future generations.
- South African goods and services will have a competitive advantage in international markets.
- Potential to reduce electricity tariff prices, as revenue earned from green attributes can be ploughed back.
- To increase awareness of public on renewable energy benefits and to participate in the energy market.
- Monetising your excess energy production.
- Contributing to the growth of renewable energy.
- Enhancing your reputation as a sustainable energy producer.

**I am proud
to be eco-conscious.**
