what you need

### Tips on combating timer drift on our geyser and pool pump timers after outages

Loadshedding or a power outage may affect the settings on our geyser and pool pump timers, and any other household appliances fitted with a timer. Here is what we need to know about timers during outages.

After power has been restored to our homes, check that your geyser timer is still set correctly to operate outside of 5 pm to 9 pm.

In summer, make sure that the timer on your pool pump is still set to run and

filter the water twice every 24 hours. Eskom recommends that these settings may be halved during winter possibly even reduced to once a week if the pool is completely covered.

Also regularly replace the timer's backup battery or replace the whole timer in the case of a sealed unit.

Feel free to contact Eskom for any further information.
