

1882 South Africa was one of the first countries in the world to use electricity on a commercial basis. As elsewhere, the supply of electricity began under the auspices of various municipalities. Kimberley was the first to introduce electric street lights in 1882, before London had electric lights. Kimberley's first reticulation system was commissioned in 1890, followed by Johannesburg in 1891, Pretoria in 1892, Cape Town in 1895, East London in 1899, Bloemfontein in 1900 and Port Elizabeth in 1906.

1906 In the 1890s, mining groups combined to erect power stations to supply their own needs. The Victoria Falls Power Company Limited (VFP) was registered to harness the Victoria Falls and supply electricity to industries on the Witwatersrand and in Southern Rhodesia, now Zimbabwe. For technical and financial reasons the project was abandoned and the VFP concentrated on the exploration of Transvaal coal. By 1915 it had four power stations and at one stage was the largest utility in the British Empire.

1923 The need for a national power system which could meet the demands of the entire country led to the Electricity Act of 1922 and the establishment of the Electricity Supply Commission in 1923. The Commission's first chairman was Dr H.J. van der Bijl, an internationally recognised scientist who also founded Iscor and the IDC. Eskom began generating power in 1925 and soon became South Africa's leading electricity supplier.

1948 Eskom took over the VFP in 1948, a further step towards a national supply system. By the end of 1988, Eskom was supplying more than 97% of South Africa's electricity. It now ranks among the largest electricity utilities in the world.

1962 Eskom's first power stations were far advanced for their time, but small by today's standards with sets of 33 MW and later 60 MW. In 1962, the first "big" sets, 100 MW and 125 MW, were commissioned. This led to the present 600 MW sets which are among the largest and technologically most advanced in the world.

1973 The idea of an integrated transmission system, linking all major cities in the country, was first raised in the 1920s. By 1973 this had become a reality when all Eskom undertakings had been connected. The transmission system today has more than 200 000 km of lines of which 21 000 km are part of the national grid. In 1987, the first 765 kV lines were energised.

1984 With vast deposits of coal available Eskom's base-load stations are mainly coal fired. It has also harnessed South Africa's meagre hydro potential. In addition, in 1984, South Africa's first nuclear power station was operational.

1985 Eskom was restructured in 1985 to meet the electricity demands of a changing South Africa. The Electricity Supply Commission was replaced by a body corporate known as Escom (Eskom since 1987), controlled and managed by the Electricity Council and Management Board in terms of the Eskom Act.

1988 Eskom re-enforces the 80-year old VFP vision of harnessing the hydro potential of southern Africa.

Foreword

Statistics is a vital component of planning and Eskom has for many years gathered a wealth of data concerning electricity supply in South Africa. We are also increasingly accumulating statistics from beyond our borders, so that a more comprehensive picture of electricity usage and generation in Africa can be presented.

Copies of this Statistical Yearbook are distributed worldwide to utilities, business undertakings, banks, management consultants, consulting engineers, research institutions as well as industry and consumer associations. I trust that this publication will prove to be a useful source of information.

I.C. McRAE
Chief Executive of Eskom and Chairman of the Management Board
10 May 1989

Total power station assigned sent-out rating, MW	31 465	29 618	26 682	24 359	23 168	21 673	20 523	18 989	17 339	15 056

1. Certain adjustments had to be made to make figures comparable with current figures, which are presented in terms of the Eskom Act of 1987. 2. Capacity hours available x 100/total capacity hours in year. 3. kW.h sent out x 100/(average assigned sent-out rating x hours in year). 4. Electricity sent out by Eskom, some industries and municipalities which generate all or part of their electricity requirements. 5. Includes Eskom electricity sent out to neighbouring countries.

6. In respect of pumped-storage facilities and synchronous condenser mode of operation. See Note g. Table 6. 7. Difference between electricity available for distribution and electricity sold is due to transmission losses. 8. Base-load stations, except in the case of older, uneconomical plant, which are used only for peak demands or in emergencies. 9. Used only for peaking or in emergencies. 10. Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams. 11. Pumped-storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

Wilge	Coal fired	Witbank	2 x 30; 3 x 60	240	216
Total in service, 27 Eskom stations^d				33 176	31 465
Subtotal coal fired (19 stations) ^e				28 916	27 295
Subtotal gas turbine (3 stations) ^f				390	390
Subtotal hydro-electric (2 stations) ^g				540	540
Subtotal pumped storage (2 stations) ^h				1 400	1 400
Subtotal nuclear (1 station)				1 930	1 840
Total in service, 27 Eskom stations				33 176	31 465

^a Differences between generator rating and total station rating, and installed and sent-out rating reflect auxiliary power consumption and reduced capacity caused by age of plant and/or low coal quality.

^b Dry cooled unit specifications are based on design back-pressure and ambient air temperature.

^c In addition to its own installed capacity, Eskom also has a firm contractual capacity of 1 355 MW from Cahora Bassa, which was not available during 1988. It also has agreements to purchase electricity from SWAWEK, Tescor and some municipalities.

^d Base-load stations, except in the case of older, uneconomical plant, which are used only for peak demands or in emergencies.

^e Used only for peaking or in emergencies.

^f Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams.

^g Pumped-storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

^h Includes three 7 MW house sets.

ESKOM: Customer categories by distribution region

in order of sales volume

Table 14

Electricity sold by a distribution region is purchased from the Generation Group. The cost of a region's own usage is allocated to working cost. A region's sales to other SBUs are charged out.

Usage on Eskom distribution premises and sales to rural/farming customers, previously included under industrial sales, are now listed separately.

Distribution region and category	Number of customers	GW.h sold 1988	% of total GW.h	% growth 1987-88	Revenue 1988 R000	% of total revenue	Average price cents per kW.h 1988	Average price cents per kW.h 1987

The Venda Government has established a separate body for the distribution and reticulation of electricity in Venda, the Venda Electricity Corporation, which came into being on 1 April 1987. Since then the number of customers connected has grown from 3 200 to 4 783 in February 1989 and energy purchased from Eskom from 54,021 GW.h in 1986 to 73,845 GW.h in 1988, equivalent to an average annual growth rate of 16,92%.

Conversion factors and equivalents

Heat/energy

1 kW.h	= 3 412,14 Btu = 3,6 MJ = 859,845 kcals
1 therm	= 29,307 1 kW.h = 100 000 Btu = 105,506 MJ = 25,199 6 Mcals
1 GJ	= 277,778 kW.h = 9,478 17 therms = 238,846 Mcals
1 CHU ^b	= 1,8 Btu = 1 900,4 J (approx)
1 Q	= 10^{18} Btu
1 quad	= 10^{15} Btu

Calorific value, mass basis

1 Btu/lb	= 2,326 kJ/kg
----------	---------------

Pressure

1 lb/in ²	= 6,894 76 kPa (or kN/m ²) = 0,070 31 kg/cm ² = 0,068 947 6 bar
1 bar	= 100 kPa = 10^5 N/m ² = 14,503 68 lb/in ²

Other

1 cu sec	= 0,028 317 m ³ /s
1 mile	= 1,609 344 km
1 lb	= 0,453 592 37 kg
1 gal (imp)	= 4,546 09 litres (1 litre = 1 dm ³ = 1 000 cm ³)
1 gal (US)	= 3,785 412 litres
1 ton (long)	= 1,016 05 tons (metric ton)
1 ton (short)	= 0,907 185 tons (metric ton)
1 hp (UK)	= 745,700 W (or J/s)
1 hp (metric)	= 735,499 W (or J/s)

Approximate equivalents

1 ft ³ natural gas	approximately equals	1,000 Btu
1 ton gas/diesel oil	approximately equals	431 therms
1 ton crude oil	approximately equals	7,35 barrels or 432 therms
1 ton fuel oil	approximately equals	6,55 barrels or 406 therms
1 ton power station oil	approximately equals	406 therms
1 ton power station coal ^c	approximately equals	231 therms
1 ton industrial coal	approximately equals	261 therms

Power station equivalents

475 tons of coal or 160 tons of oil will produce about 1 GW.h in a typical modern power station. One ton of natural uranium, when used in a Magnox reactor, will supply about 30 GW.h.

a The figures in the tables have, where necessary, been rounded off to the nearest final digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

b Centigrade heat unit.

c For South African power stations:

Tutuka: 1 ton approx. equals 200 therms or 21,12 GJ

Lethabo: 1 ton approx. equals 147 therms or 15,48 GJ

GENERAL

Symbols and abbreviations used

— = not applicable/not available

kW = kilowatt

MW = megawatt (1 000 kW)

kW.h = kilowatt hour (unit)

MW.h = megawatt hour (1 000 units)

GW.h = gigawatt hour (1 000 000 units)
