

Historical overview

1882 South Africa was one of the first countries in the world to use electricity on a commercial basis. As elsewhere, the supply of electricity began under the auspices of various municipalities. Kimberley was the first to introduce electric street lights in 1882, before London had electric lights. Kimberley's first reticulation system was commissioned in 1890, followed by Johannesburg in 1891, Pretoria in 1892, Cape Town in 1895, Pietermaritzburg in 1896, Durban in 1897, East London in 1899, Bloemfontein in 1900 and Port Elizabeth in 1906.

1906 In the 1890s, mining groups combined to erect power stations to supply their own needs. The Victoria Falls Power Company Limited (VFP) was registered in 1906 to harness the Victoria Falls and supply electricity to industries on the Witwatersrand and in Southern Rhodesia, now Zimbabwe. For technical and financial reasons the project was abandoned and the VFP concentrated on the exploitation of Transvaal coal. By 1915 it operated four power stations under the name of The Victoria Falls and Transvaal Power Company and at one stage was the largest utility in the British Empire.

1923 The need for a national power system which could meet the demands of the entire country led to the Electricity Act of 1922 and the establishment of the Electricity Supply Commission in 1923. The Commission's first chairman was Dr H.J. van der Bijl, an internationally recognised scientist who also founded Iscor and the IDC. Eskom began generating power in 1925 and soon became South Africa's leading electricity supplier.

1948 Eskom took over the VFP in 1948, a further step towards a national supply system. By the end of 1989, Eskom was supplying about 97% of South Africa's electricity. It now ranks among the largest electricity utilities in the world.

1962 Eskom's first power stations were far advanced for their time, but small by today's standards with sets of 33 MW and later 60 MW. In 1962, the first "big" sets, 100 MW and 125 MW, were commissioned. This led to the present 600 MW sets which are among the largest and technologically most advanced in the world.

1973 The idea of an integrated transmission system, linking all major cities in the country, was first raised in the 1920s. By 1973 this had become a reality when all Eskom undertakings had been connected. The transmission system today has more than 210 000 km of lines of which 21 000 km are part of the national grid. In 1987, the first 765 kV lines were energised.

1984 With vast deposits of coal available, Eskom's base-load stations are mainly coal fired. It has also harnessed South Africa's meagre hydro potential. In addition, in 1984, South Africa's first nuclear power station became operational.

1985 Eskom was restructured in 1985 to meet the electricity demands of a changing South Africa. The Electricity Supply Commission was replaced by a body corporate known as Escom (Eskom since 1987), controlled and managed by the Electricity Council and Management Board. Eskom commits itself to being a professionally managed, customer orientated business.

1989 Eskom's commitment to business excellence and customer focus extends to include the accelerated electrification of urban and rural areas and closer contact with other utilities on the subcontinent.

Copies of this Statistical Yearbook are distributed worldwide to utilities, business undertakings, banks, management consultants, consulting engineers, research institutions as well as industry and consumer associations.

Foreword

Eskom's 1989 Statistical Yearbook contains the latest available data of electricity supply in South Africa.

I am also pleased to report that we have received tremendous co-operation from our neighbours and as a result we are now able to present a more comprehensive picture of electricity supply in southern Africa as well. My sincere thanks to all those who contributed to making this publication possible. It is providing us with an increasingly useful picture of our region.

IAN McRAE
Chief Executive of Eskom and Chairman of the Management Board
9 April 1990

Total power station assigned sent-out rating, MW	32 403	31 465	29 618	26 682	24 359	23 168	21 673	20 523	18 989	17 339

1. Certain adjustments had to be made to make figures comparable with current figures, which are presented in terms of the Eskom Act of 1987. 2. Capacity hours available x 100/total capacity hours in year. 3. kW.h sent out x 100/(average assigned sent-out rating x hours in year). 4. Electricity sent out by Eskom, some industries and municipalities which generate all or part of their electricity requirements. 5. Includes Eskom electricity sent out to neighbouring countries.

6. In respect of pumped-storage facilities and synchronous condenser mode of operation. See Note g, Table 6, 7. Difference between electricity available for distribution and electricity sold is due to transmission losses. 8. Base-load stations, except in the case of older, uneconomical plant, which are used only for peak demands or in emergencies. 9. Used only for peaking or in emergencies. 10. Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams. 11. Pumped-storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

$$^1 \text{Station load factor} = \frac{\text{kW.h sent out} \times 100}{(\text{assigned sent-out rating}) \times \text{hours in year}}$$

² Operating statistics are based on average capacity during the year.

$$^3 \text{ Availability} = \frac{\text{capacity hours available} \times 100}{\text{total capacity hours in year}}$$

⁴ Decommissioned during 1989.

⁵ Auxiliary consumption exceeded energy generated.

⁶ Non-reserve stored capacity used for calculation of station load factor, and availability.

⁷ Actual fuel burnt excluding 464 995 tons coal stock adjustment on 31 December 1989.

⁸ Efficiency based on adjusted heat content.

Total in service, 26 Eskom stations			34 141	32 403	45	3 093

^a Difference between installed capacity and sent-out rating reflects auxiliary power consumption and reduced capacity caused by age of plant and/or low coal quality.

^b Base-load station

^c Mid-merit station.

^d Stations used for peaking or emergency supplies.

^e Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams.

^f Pumped storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

^g Dry cooled unit specifications are based on design back-pressure and ambient air temperature.

Sent-out Capacity

ESKOM: Customer categories by distribution region

in order of sales volume

Table 14

Electricity sold by a distribution region is purchased from the Generation Group. The cost of a region's own usage is allocated to working costs. A region's sales to other SBUs are charged out. Usage on Eskom's distribution premises and sales to rural/farming customers, previously included under industrial sales, are now listed separately.

Distribution region and category	Number of customers	GW.h sold 1989	% of total GW.h	% growth 1988-89	Revenue 1989 R000	% of total revenue	Average price cents per kW.h 1989	Average price cents per kW.h 1988

^aNet installed capacity is measured at the terminals of the station, i.e. after deduction of the power absorbed by the auxiliary installations and the losses in the station transformers, if any.

^bElectricity production refers to gross production, which includes the consumption by station auxiliaries and any losses in the transformers that are considered integral parts of the station. Excluded is electricity produced from pumped storage.

^a Net installed capacity is measured at the terminals of the station, i.e. after deduction of the power absorbed by the auxiliary installations and the losses in the station transformers, if any.

^b Electricity production refers to gross production, which includes the consumption by station auxiliaries and any losses in the transformers that are considered integral parts of the station.

^c Countries with installed capacity of 10 000 MW and greater.

^d Bophuthatswana, Botswana, Ciskei, Lesotho, Namibia, South Africa, Swaziland, Transkei, Venda.

Conversion factors and equivalents

Heat/energy

1 kW.h	= 3 412,14 Btu = 3,6 MJ = 859,845 kcals
1 therm	= 29,307 1 kW.h = 100 000 Btu = 105,506 MJ = 25,199 6 Mcals
1 GJ	= 277,778 kW.h = 9,478 17 therms = 238,846 Mcals
1 CHU ^a	= 1,8 Btu = 1 900,4 J (approx)
1 Q	= 10^{18} Btu
1 quad	= 10^{15} Btu

Calorific value, mass basis

1 Btu/lb	= 2,326 kJ/kg
----------	---------------

Pressure

1 lb/in ²	= 6,894 76 kPa (or kN/m ²) = 0,070 31 kg/cm ² = 0,068 947 6 bar
1 bar	= 100 kPa = 10^5 N/m ² = 14,503 68 lb/in ²

Other

1 cu sec	= 0,028 317 m ³ /s
1 mile	= 1,609 344 km
1 lb	= 0,453 592 37 kg
1 gal (imp)	= 4,546 09 litres (1 litre = 1 dm ³ = 1 000 cm ³)
1 gal (US)	= 3,785 412 litres
1 ton (long)	= 1,016 05 tons (metric ton)
1 ton (short)	= 0,907 185 tons (metric ton)
1 hp (UK)	= 745,700 W (or J/s)
1 hp (metric)	= 735,499 W (or J/s)

Approximate equivalents

1 ft ³ natural gas	approximately equals	1,000 Btu
1 ton gas/diesel oil	approximately equals	431 therms
1 ton crude oil	approximately equals	7,35 barrels or 432 therms
1 ton fuel oil	approximately equals	6,55 barrels or 406 therms
1 ton power station oil	approximately equals	406 therms
1 ton power station coal ^b	approximately equals	231 therms
1 ton industrial coal	approximately equals	261 therms

Power station equivalents

475 tons of coal or 160 tons of oil will produce about 1 GW.h in a typical modern power station. One ton of natural uranium, when used in a Magnox reactor, will supply about 30 GW.h.

a Centigrade heat unit.

b For South African power stations:

Tutuka: 1 ton approx. equals 200 therms or 21,12 GJ

Lethabo: 1 ton approx. equals 147 therms or 15,48 GJ

GENERAL

Symbols and abbreviations used

- = not applicable/not available

kW = kilowatt

MW = megawatt (1 000 kW)

kW.h = kilowatt hour (unit)

MW.h = megawatt hour (1 000 units)

GW.h = gigawatt hour (1 000 000 units)

The figures in the tables have, where necessary, been rounded off to the nearest final digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.
