

Historical overview

1882 South Africa was one of the first countries in the world to use electricity on a commercial basis. As elsewhere, the supply of electricity began under the auspices of various municipalities. Kimberley was the first to introduce electric street lights in 1882, before London had electric lights. Kimberley's first reticulation system was commissioned in 1890, followed by Johannesburg in 1891, Pretoria in 1892, Cape Town in 1895, Pietermaritzburg in 1896, Durban in 1897, East London in 1899, Bloemfontein in 1900 and Port Elizabeth in 1906.

1906 In the 1890s, mining groups combined to erect power stations to supply their own needs. The Victoria Falls Power Company Limited (VFP) was registered in 1906 to harness the Victoria Falls and supply electricity to industries on the Witwatersrand and in Southern Rhodesia, now Zimbabwe. For technical and financial reasons the project was abandoned and the VFP concentrated on the exploitation of Transvaal coal. By 1915 it operated four power stations under the name of The Victoria Falls and Transvaal Power Company and at one stage was the largest utility in the British Empire.

1923 The need for a national power system which could meet the demands of the entire country led to the Electricity Act of 1922 and the establishment of the Electricity Supply Commission in 1923. The Commission's first chairman was Dr H.J. van der Bijl, an internationally recognised scientist who also founded Iscor and the IDC. Eskom began generating power in 1925 and soon became South Africa's leading electricity supplier.

1948 Eskom took over the VFP in 1948, a further step towards a national supply system. By the end of 1990, Eskom was supplying more than half the electricity in Africa. It ranks among the largest electricity utilities in the world.

1962 Eskom's first power stations were far advanced for their time, but small by today's standards with sets of 33 MW and later 60 MW. In 1962, the first "big" sets, 100 MW and 125 MW, were commissioned. This led to the present 600 MW sets which are among the largest and technologically most advanced in the world.

1973 The idea of an integrated transmission system, linking all major cities in the country, was first raised in the 1920s. By 1973 this had become a reality when all Eskom undertakings had been connected. Eskom has more than 220 000 km of power lines of which 22 000 km are part of the national grid. In 1987, the first 765 kV lines were energised.

1984 With vast deposits of coal available, Eskom's base-load stations are mainly coal fired. It has also harnessed South Africa's meagre hydro potential. In addition, in 1984, South Africa's first nuclear power station became operational.

1985 Eskom was restructured in 1985 to meet the electricity demands of a changing South Africa. The Electricity Supply Commission was replaced by a body corporate known as Escom, controlled and managed by the Electricity Council and Management Board. In 1987 the Eskom Act and the Electricity Act were promulgated and Escom's name was changed to Eskom. Eskom commits itself to being a professionally managed, customer orientated business.

1990 Eskom supports a new democratic outward-looking South Africa. The goals of bringing affordable electricity to all and joining a sub-Saharan interconnected grid are closer to becoming a reality.

Hierdie publikasie is ook in Afrikaans verkrygbaar.

Foreword

Statistics is an essential component of planning and Eskom has over the years gathered a wealth of information concerning electricity generation and supply in South Africa and its neighbouring countries. Our wish to share this information with interested parties throughout the world has been rewarded with an ever increasing demand for Eskom's Statistical Yearbook.

As political constraints begin to ease, utilities in the southern African region are eager to exchange know-how and link up resources for the benefit of all. An interconnected grid spanning the subcontinent may well be closer to becoming a reality than was hoped a year ago. The data contained in this publication will be helpful in evaluating current electricity generation and supply in South and southern Africa.

I.C. McRAE
Chief Executive
30 April 1991

Copies of this Statistical Yearbook are distributed worldwide to utilities, business undertakings, banks, management consultants, consulting engineers, research institutions as well as industry and consumer associations.

Conversion factors and equivalents

Heat/energy

1 kWh	= 3 412,14 Btu = 3,6 MJ = 859,845 kcals
1 therm	= 29,307 1 kWh = 100 000 Btu = 105,506 MJ = 25,199,6 Mcals
1 GJ	= 277,778 kWh = 9,478 17 therms = 238,846 Mcals
1 CHU ^a	= 1,8 Btu = 1 900,4 J (approx)
1 Q	= 10^{18} Btu
1 quad	= 10^{15} Btu

Calorific value, mass basis

1 Btu/lb	= 2,326 kJ/kg
----------	---------------

Pressure

1 lb/in ²	= 6,894 76 kPa (or kN/m ²) = 0,070 31 kg/cm ² = 0,068 947 6 bar
1 bar	= 100 kPa = 10^5 N/m ² = 14,503 68 lb/in ²

Other

1 cusec	= 0,028 317 m ³ /s
1 mile	= 1,609 344 km
1 lb	= 0,453 592 37 kg
1 gal (imp)	= 4,546 09 litres (1 litre = 1 dm ³ = 1 000 cm ³)
1 gal (US)	= 3,785 412 litres
1 ton (long)	= 1,016 05 tons (metric ton)
1 ton (short)	= 0,907 185 tons (metric ton)
1 hp (UK)	= 745,700 W (or J/s)
1 hp (metric)	= 735,499 W (or J/s)

Approximate equivalents

1 ft ³ natural gas	approximately equals	1,000 Btu
1 ton gas/diesel oil	approximately equals	431 therms
1 ton crude oil	approximately equals	7,35 barrels or 432 therms
1 ton fuel oil	approximately equals	6,55 barrels or 406 therms
1 ton power station oil	approximately equals	406 therms
1 ton power station coal ^b	approximately equals	231 therms
1 ton industrial coal	approximately equals	261 therms

Power station equivalents

475 tons of coal or 160 tons of oil will produce about 1 GWh in a typical modern power station. One ton of natural uranium, when used in a Magnox reactor, will supply about 30 GWh.

a Centigrade heat unit.

b For South African power stations:

Tutuka: 1 ton approx. equals 200 therms or 21,12 GJ

Lethabo: 1 ton approx. equals 147 therms or 15,48 GJ

GENERAL

Symbols and abbreviations used

- = not applicable/not available

kW = kilowatt

MW = megawatt (1 000 kW)

kWh = kilowatt hour (unit)

MWh = megawatt hour (1 000 units)

GWh = gigawatt hour (1 000 000 units)

The figures in the tables have, where necessary, been rounded off to the nearest final digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

a. Certain adjustments had to be made to make figures comparable with current figures, which are presented in terms of the Eskom Act of 1987. b. Capacity hours available x 100/total capacity hours in year. c. kWh sent out x 100/(average assigned sent-out rating x hours in year). d. Electricity sent out by Eskom, some industries and municipalities which generate all or part of their electricity requirements. e. Includes Eskom electricity sent out to neighbouring countries.

f. In respect of pumped-storage facilities and synchronous condenser mode of operation. See Note g. Table 6. g. Difference between electricity available for distribution and electricity sold is due to transmission losses. h. Base-load stations, except in the case of older, uneconomical plant, which are used only for peak demands or in emergencies. i. Used only for peaking or in emergencies. j. Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams. k. Pumped-storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

Total in service, 25 Eskom stations			35 673	33 843	51	5 078

^a Difference between installed capacity and sent-out rating reflects auxiliary power consumption and reduced capacity caused by age of plant and/or low coal quality.

^b Base-load station.

^c Mid-merit station.

^d Stations used for peaking or emergency supplies.

^e Use restricted to peaking and emergencies and availability of water in Hendrik Verwoerd and P.K. le Roux dams.

^f Pumped storage facilities are net users of electricity and are used for peaking. Water is pumped during off-peak periods to generate electricity during peak periods.

^g Dry cooled unit specifications are based on design back-pressure and ambient air temperature.

^aIncludes Eskom electricity sent out to

ESKOM: Customer categories by distribution region

in order of sales volume

Table 14

Electricity sold by a distribution region is purchased from the Generation Group. The cost of a region's own usage is allocated to working costs. A region's sales to other Eskom business units are charged out. Usage on Eskom's distribution premises and sales to rural/farming customers, previously included under industrial sales, are now listed separately.

Distribution region and category	Number of customers	GWh sold 1990	% of total GWh	% growth 1989-90	Revenue 1990 R000	Average price cents per kWh 1990	Average price cents per kWh 1989
						% of total revenue

^a Supplies to municipalities, local authorities and electricity undertakings in neighbouring states for redistribution.

^b Own usage consists of electricity used on region's distribution premises and its internal sales to other Eskom business units.

ESKOM: Revenue per kWh by category of customer

Table 17

Sales to rural/farming and commercial customers, previously included under industrial sales, are now listed separately.

Year	Actual price (in c/kWh)								Producer Price Index 1985 = 100	Real price (in c/kWh)								
	Bulk ^a	Domestic and street lighting	Commercial	Industrial	Mining	Rural/ farming	Traction	Average for all categories	Change %	Bulk ^a	Domestic and street lighting	Commercial	Industrial	Mining	Rural/ farming	Traction categories	Average for all	Change %

^a Includes stone quarrying, clay and sand pits, chemicals and fertilizers, mineral mining, salt mining and evaporating, precious and semi-precious stone mining (except diamond mining) and other non-metallic mineral mining.

^b Up to 1972, iron and manganese figures were combined.

Standard Industrial Classification Divisions

- 11 Agriculture, hunting, forestry and logging, and other rural supplies
- 31 Manufacture of food, beverages, and tobacco
- 32 Manufacture of textiles, wearing apparel and leather goods
- 33 Manufacture of wood and wood products, including furniture
- 34 Manufacture of paper and paper products, including printing and publishing
- 35 Manufacture of chemicals and of chemical petroleum, coal, rubber and plastic products
- 36 Manufacture of non-metallic mineral products
- 371 Iron and steel basic industries
- 372 Non-ferrous metal basic industries
- 38 Manufacture of fabricated metal products, machinery and equipment

^a Includes other manufacturing and commercial enterprises

ESKOM: Number of farm supplies

Table 20 (a)

Farm supplies include supplies which are furnished to agriculture and smallholdings and which are primarily used for farming purposes.										
Year	1990	1989	1988	1987	1986 ^a	1985	1984	1983	1982	1981
Number	103 724	99 538	89 897	82 244	73 302	70 364	65 018	59 098	53 467	49 238
% growth	4,2	10,7	9,3	12,2	4,2	8,2	10,0	10,5	8,6	9,0
Annual average growth										
1981–1990	8,7%									

^a The 1986 figures have been adjusted due to reclassification of categories within the rural tariff, disconnections and network sales.

ESKOM: Annual non-cumulative rural and farming supplies

by region^a

SOUTH AFRICA: Consumption of electricity

Table 25

Source: Central Statistical Service *Census of Electricity, Gas and Steam, Report No. 41-01-01 (1986)*^a.

Units consumed by	GWh
Mining	
Gold and uranium mines	22 261
Coal mines	2 035
Other mines	5 646
S.A. Transport Services	
Traction	3 903
Other	828
Own local authority departments	
Water departments	314
Public lighting (street etc)	648
Other purposes	835
Rand Water Board & Regional Water Supply Commissions	1 426
Government departments, provincial administrations, etc	3 949
Other private business (manufacturing, commerce, etc.)	60 858
Domestic use	17 644
Other	2
	120 348

^a The latest census figures will be available in our next edition.
