USHWANKATHETO LWESIGQEBA

UEskom ungumnini weLayisenisi Yesitishi Senyukliya (NIL-01 uhlelo 19) [1] yesikhululo Sokuphehla Umbane ngenyukliya SaseKoeberg (iKoeberg), eneeyunithi ezimbini zeriyeletha (Reactor) ezisebenzisa amanzi axinzelelweyo ukuphehla umbane oyi-945 MWe. Esi sitishi saqalisa ukusebenza ngeenjongo zorhwebo ngo-1984, kwaye uphononongo lokuqala lokhuseleko lwaqikelela ukuba siza kusebenza iminyaka eyi-40. IYunithi 1 kunye neYunithi 2 ziza kufikelela kwiminyaka eyi-40 yokusebenza ngeenjongo zorhwebo ngo-2024 no-2025 ngokulandelelana kwazo. IKoeberg oko yavelisa umbane ngokukhuselekiyo nangokuthembekileyo, isebebenzisa amandla enyukliya acocekileyo, ngaphezu kweminyaka eyi-36. IKoeberg ihambisana nemigaqo siseko eyenzelwe onke amashishini asebenzisa inyukliya, isebebenzisa iinkqubo zolawulo ezipunywe kumazwe ngamazwe naselizweni lonke, kwaye iquesha abasebenzi abanemfundo efanelekileyo, baqeleshwa ngokusemthethweni ukuze bagunyaziswe ukwenza imisebenzi yabo.

UEskom ufake isicelo kuMlawuli Wenyukliya Welizwe (National Nuclear Regulator [NNR]) sokutshintsha ilayisenisi-NIL-01 ukufumana imvume yokusebenzisa iKoeberg ngaphaya komhla we-21 kuJulayi 2024, eminye iminyaka eyi-20 eyongezelelweyo. Lento iyakuthetha ukuba uYunithi 1 uyakusebenza kude cube ngumhla we-21 kuJulayi 2044, ngelixa yena uYunithi 2 uzakusebenza kude cube ngumhla we-9 kuNovemba 2045. Esi sicelo esifakwe kwiNNR sokwandisa ixesha lokusebenzisa iKoeberg ngaphaya kwexesha elibekwe kwi-NIL-01 sibizwa ngokuba sisicelo sokwandisa ixesha lokusebenza kuphehlwa umbane eKoeberg (long-term operation [LTO]). Isicelo selayisenisi siyahambisana neMigaqo Yolawulo Yokwandisa Ixesha Lokusebenza [2] kwaye sisekelwe kumqulu oneenkukacha zokhuseleko (safety case) lukaEskom, ebonisa ukuba iKoeberg inokusetyenziswa ngokukhuselekiyo ubuncinane iminyaka eyi-60 ngeenjongo zorhwebo.

Olu xwebhu lwenkcazelokawonke-wonke (public information document [PID]) injongo yalo kukunika uwonke-wonke inkcazelokawonke eyaneleyo ngemincipheko yeradiyeyishini (radiation) kuhuseleko, kwimpilo, nakokusingqongileyo ngenxa yokwandisa kwexesha lokusebenza kweKoeberg ngeminye iminyaka eyi-20. Oku kuza kwenza ukuba abantu bakwazi ukuthatha inxaxheba ngendlela evakalayo kwinkqubo yokuthethana nabantu efunwa yimiylelo.

Isigqibo sikaEskom sokufuna iLTO sihambisana nokuqhelekileyo kwizitishi zokuphehla umbane kwilizwe lonke. Sitethanje kukho iiriyeletha zenyukliya eziyi-133 ehlabathini jikelele oko zisebenza kangangeminyaka eyi-40 nangaphezulu [3]. United States of America (USA), iKhomishini Elawula Inyukliya igunyazise izicelo zokongezwa kweminyaka yokusebenza ukusukela kweeyunithi zeriyeletha eziyi-94 zenyukliya ukusuka kwiminyaka eyi-40 ukuya kwiminyaka eyi-60, Kwaye ezinye iiyuniti ezintandathu zeeriyeletha zenyukliya zaseUSA zigunyaziswe ukuba zisebenze iminyaka eyi-80 [4]. Le nto ingqina ukuba iLTO iyanceda kwezoqoqosho kwaye ayizi namngcipheko ongafanelekanga xa imvume ifunyenwe emva kokulandela iinkqubo ezingqongqo zemimiselo.

Umqulu oneenkukacha zokhuseleko lweLTO uza nezibakala nobungqina obuqulunqiwego babhalwa phantsi obubonisa ukuba akukho mngcipheko weradiyeyishini ongeyomfuneko kuhuseleko, impilo, okanye kokusingqongileyo. Ingcaciso ngomqulu oneenkukacha zokhuseleko isekelwe kwiintlolo ngeentlolo zokhuseleko ezenziwego ukuze kuxhaswe iLTO. Uhlolo lokhuseleko

YEKAWONKE-WONKE

Iwamaxesha athile (periodic safety review [PSR]) luhlolo lokhuseleko olucokisayo lweenkalo zokhuseleko eziyi-14 (ezibandakanya izinto ezahlukeneyo ezifunekayo kukhuseleko) ukuze kwensiwe isigqibo sokuba iKoeberg ihambisana kangakanani nemigaqo efunekayo yokhuseleko esetyenziswa kumazwe ngamazwe, kweli, nakwimimiselo kwaye kubonwe izinto ezinokuphuculwa kukhuseleko. Malunga ne-1 150 yemigaqo efunekayo kukhuseleko iye yahlolwa. Iziphumo zePSR ziqinisekisile ukuba ukuqhube ka nokusebenzisa iKoeberg ngendlela ekhuselekileyo ziyakuxhasa, kuquka neLTO.

Izenzo neenkubo ezisebenzayo zokulawula ukuguga koomatshini zingazithintela iziphumo ezibi zingachaphazeli ukuthembeka koomatshini besi sitishi ebuden i bexesha leLTO. UMzantsi Afrika umeme iArhente Yamandla eAthom Yamazwe Ngamazwe (International Atomic Energy Agency [IAEA]) ukuba iphonononge iinkalo zokhuseleko xa iKoeberg isetyenziswa ixesha elongezelelwego (safety aspects of long-term operation [SALTO]). Olu hlolo belujoliswe ekuncedeni iKoeberg ilandele indlela ekhuselekileyo nesebenzayo kwilTO ilandela inkqubo equlunqwe kakuhle kwaye kukho negalelo elivel a kwiingcali zamazwe ngamazwe. Injongo ebalulekileyo yeSALTO yayikukuhola iinkqubo zokulawula ukuguga koomatshininkqubo zaseKoeberg ukuba ziyasebenza kwaye ziphelele na, ukuze ziphuculwe a pho zisilela khona ngenjongo yokuqinisekisa ukuba kuqinisekiswe oomatshini abagugayo balawulwa ngendlela efanelekileyo. Iziphumo zohlolo lweSALTO ziye zaqinisekisa kwaye ziyakuxhasa ukuqhube ka kweKoeberg isebe na ngendlela ekhuselekileyo, kuquka neLTO. Ukuphuculwa nokulawula ukuguga, iimvavanyo, neenkubo zokubeka esweni, oomatshini, izakhiwo, neekhomponenti (systems, structures, and components [SSC]) kuza kuqhube ka ngaphambi kweLTO nasebuden ngalo lonke ixesha leLTO ukuze kuqinisekiswe ukuba kusetyenzwa ngendlela ekhuselekileyo, nethembekileyo.

Ilaisenisi Yesitishi Senyukliya eyiNIL-01 ibeka imiqathango yelaisenisi eliqela ekufuneka iKoeberg iyithobe. Iquka imiqathango yokukhuselwa kwabantu kwiradiyeyishini, ukukhuselwa kokusingqongileyo, ukulawulwa kwenkcitho eneradiyeyishini, ukulungiswa nokuhlolwa kwezixhobo zesi sitishi, neminye emininzi. Kulindelwe ukuba le miqathango yelaisenisi ihlale isebe na ebuden beLTO kwaye iKoeberg iqhubek nobuthobela imiqathango yelaisenisi. I-NNR yiyo ejonga umsebenzi owenziwa eKoeberg ngokubeka esweni ukuthotyelwa kwemiqathango yelaisenisi nangamanyathelo okunyanzelisa ukuba imiqathango yelaisenisi iyathotyelwa. Ulawulo olungqongqo olunikelwa yiNNR luye Iwafaka isandla ekuqhube keni kusetyenzwa ngendlela ekhuselekileyo eKoeberg kwaye luza kuqhube ka lusenjenjalo ebuden beLTO.

I-NNR ibeke izinto eziphambili ezijongwayo kukhuseleko [5] phakathi kwazo kukho izinto ezijongwayo kumngcipheko nemida yedowusi (dose limits) ukuze kukhuselwe abasebenzi nowonke-wonke kuzo zonke iimeko zokusebenza neziganeko ezinxulumene nezitishi zenyukliya eziphehl umbane. Izinto eziphambili ezijongwayo kukhuseleko zinezinto ezifunekayo kwiimeko ezingenakuphepheka nakwiimeko ezinokwenzeka, kwaye injongo yezinto eziphambili ezijongwayo kukhuseleko kukuqinisekisa ukuba umsebenzi owenziwa eKoeberg awudali imingcipheko yenyukliya engeyomfuneko kwaye/okanye imingcipheko yokukhuselwa kwiradiyeyishini kubasebenzi okanye kuluntu. Izinto eziphambili ezijongwayo kukhuseleko zeNNR zihambelana nezona ndlela zilungileyo zokwenza izinto kumazwe ngamazwe.

YEKAWONKE-WONKE

I-PSR iye yaqinisekisa ukuba iKoeberg izifikelele izinto eziphambili ezijongwayo kukhuseleko nokuba umngcipheko kuluntu ubungaphantsi kwe-3% yezinto eziphambili ezijongwayo yiNNR kukhuseleko, noxa umngcipheko kubasebenzi ubungaphantsi kwe-20%. Le mingcipheko ingaphantsi kwenqanaba elithathwa njengelinyamezelekayo [6] kwaye ingaphantsi kakhulu kunomngcipheko, ngokomzekelo, wokubulawa yingozi yemoto eMzantsi Afrika.

Idowusi yeradiyeyishini enokuchaphazela abasebenzi noluntu ngokubanzi ngenxa yokusebenza kweKoeberg ingaphantsi kakhulu kunemida ebekwe ngumthetho. Umda wedowusi yoqobo yonyaka kuluntu ngenxa yawo wonke umsebenzi ogunyazisiwego wenyukliya eMzantsi Afrika yi-1 mSv ngonyaka, noxa isisikelo sedowusi esisebenza eKoeberg kumtu omeleyo iyi-0,25 mSv ngonyaka [7]. I-PSR yaqinisekisa ukuba i-Koeberg iyithobele imida yedowusi kwaye imilinganiselo yedowusi yonyaka kuluntu ibingaphantsi kwe-1% yomda wedowusi obekwe ngumthetho.

Imida yedowusi yoqobo yonyaka kubasebenzi beradiyeyishini yimilinganiselo ephakathi kwe-20 mSv ngonyaka ngokwe milinganiselo ephakhathi kweminyaka emihlanu elandelanayo kwaye kungaggithwa kwidowusi eyi-50 mSv nangawuphi na unyaka omnye [7]. Iziphumo zePSR zaqinisekisa ukuba iKoeberg iyawuthobela umda wemilinganiselo ephakathi yedowusi yoqobo yonyaka nesisikelo sedowusi ekungamele kudlulwe kuso kubasebenzi esibekwe ngumthetho.

I-PSR iqinisekise nokuba ukuchaphazeleka okungakho kubasebenzi nakuwonke-wonke kwiradiyeyishini kusoloko kugcinwa kuphantsi kangangoko kunokufikeleleka (as low as reasonably achievable [ALARA]) kwaye kungaphantsi kwemida ebekwe yimiylelo kusetyenziswa imigaqo neenkqubo zokukhusela kwiradiyeyishini ezisebenzayo.

Ifuthe lomsebenzi owenziwa ngoku eKoeberg kokusingqongileyo lincinci kwaye alidlulanga kwimida ebekwa yimiylelo. Amanzi neerhasi ezimdaka ezikhutshwayo ebuden bomsebenzi oqhelekileyo zikhutshwa phantsi kweemeko ezilawulwayo kwaye kufuneka zilandele umlinganiselo wonyaka ogunyazisiwego wokuzilahla (annual authorised discharge quantity [AADQ]), ehambelana nomda wedowusi yoqobo ekungenakudlulwa kuyo ebekwe ngumthetho. Idowusi kawonke-wonke elindelweyo yabalwa kucingwa ngokukhula kokusingqongileyo kwiminyaka eyi-60 yeLTO kusetyenziswa ujikelelo oluphantsi. I-PSR iye yaqinisekisa ukuba idowusi kawonke-wonke yamanzi neerhasi ezikhutshwayo ayiyi kugqitha kwisisikelo sedowusi esiyi-0,25 mSv. Singaphantsi kakhulu kwimilanginiselo ephakathi yamanqanaba eradiyeyishini ekhoyo kokusingqongileyo emalunga ne-2,4 mSv ngonyaka [9]. Imilinganiselo ephakathi yedowusi yonyaka kumtu ngamnye ohlala kufutshane neKoeberg ungaphantsi ngokuphindwe kayi-100 kowedowusi efunyanwa kwiradiyeyishini yendalo efumaneka kokusingqongileyo. Ngoko, amathuba okuba zichaphazele impilo ngenxa yomsebenzi owenziwa eKoeberg aphantsi kakhulu.

Ukuxhaswa ngezizathu zobugcisa kweLTO kwaqinisekiswa ziziphumo zePSR. Ezinye zezigqibo ekwafikelewa kuzo zezi zilandelayo:

- Uyilo olukhoyo IwaseKoeberg Iwanele xa luholwa ngokwesiseko selayisenisi nangokwemigangatho yelizwe neyamazwe ngamazwe.
- linkqubo ezinxulumene nokugcinwa kweemeko zoomatshini izakhiwo, neekhomponenti (SSC) zesi sitishi zanele kwaye ziphunyezwakakuhle.

YEKAWONKE-WONKE

- Eyona meko ezikuyo iiSSC ezibaluleke kukhuseleko ibangela ukuba ithenjwe into yokuba kungakwazeka ukusebenza ngokukhuselekileyo ebudenibeiLTO.
- linkqubo zokulawula ukuguga, iinkqubo emazilandelwe, neendlela zolawulo ubukhulu becalazihambisana nemigangatho yamazwe ngamazwe, kwaye ukuphuculwa kwezintoezcicyisiwego kuya kuqinisekisa ukuba kusetyenzwa ngendlela ekhuselekileyo ebudenibayo yonke iLTO.

Indlela oluqhuba ngayo lalonke nje ukhuseleko lwenyukliya eKoeberg ikumgangathowamkelekileyo. Zonke izinto ezingenziwa ngendlela eqhelekileyo ezibonwe ebudenibePSR zinamanyathelo achaziwego okuziphucula, kwaye amaxesha okuthathwa kwalo manyathelo aggala njengafanelekileyo kwaye ahambelana nefuthe lawo lokhuseleko.

Emva kwengozi yaseFukushima eJapan ngo-2011 [10], iKoeberg yenza uvavanyo lokhuselekuze ilungise izinto ezafundwa kwesi siganeko, esasinamathuba aphantsi kakhulu ukuba senzeke. Uhlolo lokhuseleko lwalujolise kwiziganeko eziqatha zangaphandle (ezifana neenyikima kuneeneetsunami) ezinokuba nefuthe elibi ekusebenzeni ngendlela ekhuselekileyo, nasekulungeleni imeko yongxamiseko nentsabelo. Njengesipumo sohlolo lokhuseleko, iKoeberg ithathea manyathelo aliquela okuphucula ukukwazi kwayo ukusabela kwiziganeko ezzinjalo (anjengombane ongakumbi, eminye imithombo yamanzi okupholisa, nezixhobo ezihambayo zokususa inkcitho ekhutshwayo ebangelwe yinyikima). Ingxelo entsha yokhuseleko lwsiza iyagqityezelwa kusetyenziswa iindlela zakutshanje namava okusebenza. Ngaphezu koko, kucetywa ukuba kwensiwe uphuculo olungakumbi, oluza kuluphucula nangakumbi ukhuseleko eKoeberg ebudenibeiLTO.

Ukuba nabasebenzi abaneleyo abakwaziyo ukwenza umsebenzi kubalulekile ukuze kuxhasweiLTO. Izinto ezifunekayo ukuze abasebenzi bakwazi ukwenza umsebenzi nokuze kulawulwe ulwazizichazwe kumaxwebhu emiyalelo eNNR ([11] no-[12]). IKoeberg ineenkqubo zolawulo eziyimfuneko, iinkqubo zokuqeshwa kwabasebenzi, kunenezakhiwo zokuqeqesha ukuze kuqinisekiswe ukubabakho abasebenzi abakwazi ukusebenza nabaxhasaiLTO. Ikontraktha (contractors) ezinamava kakhulu ziye zafunyanwa ukuze zixhase ukwanda komsebenzi kwixesha elifutshane ukuya kweliphakathi ngenxa yeLTO noxa kusetyenziswa amaphulo okuqesha ukuze kuvalwe ngokusisigxina izithuba zomsebenzi ebevizulekile xa kuyimfuneko. Inkqubo yokulawulwa kolwazi yaseKoeberg iphuculwa nangakumbi kwaye iyandiswa ukuze ihambisane neendlela ekwenziwangazo kumazwe ngamazwe. linkqubo zokuqesha, zokuqeqesha, nezokupuhhlisa abasebenzi ezingqongqo zaseKoeberg zihambelana neendlela ekwenziwa ngazo kumazwe ngamazwe.

UEskom uzibophelele ekwenzeni imali efunekayo ifumanekuke kukwazeke ukusebenza ngendlela ekhuselekileyo nenokuthenjwa kwiLTO. Ngokungqinelana noMthetho Wokulawulwa Kwemali KaRhulumente neminye imithetho, iBhodi YakwaEskom iqwalasela ize igqibe ngendlelea za kufunyanwa ngayo imali yokusebenza nguEskom, ukujonga imali efunekayo kwaEskom, ngamaxesha athile. UEskom uphinde wenza amalungiselelo okuqinisekisa ukuba kukho imali eyaneleyo, njengoko kubonisiwe kwingxelo yakhe yonyaka yemali, yokuvala iKoeberg, kuquka ukulungisa umhlaba obandakanyekayo nokulawula amafutha asetyenzisiwego nenkcitho eneradiyeyishini.

YEKAWONKE-WONKE

Uphononongo Iwenkqubo yokhuseleko Iwenyukliya (nuclear safety culture [NSC]) Iwenziwa qho emva kweminyaka emithathu, kusetyenziswa imilinganiselo yeZiko Lemisebenzi Yombane Wenyukliya (Institute of Nuclear Power Operations [INPO]) yeNSC esempilweni [13]. Imilinganiselo eyi-10 yeNSC esempilweni (ngamnye oneempawu nezenzo zaho) iqwalaselwa njengomgangatho wezitishi zenyukliya. Uphononongo Iwenziwa ngo-2014, ngo-2016, nango-2019 Iwaza Iwafakwa kwiNNR. Xa bekuthelekiswa iziphumo zophononongo lweNSC zibonise ukuba amanqaku ayo yonke imilinganiselo aphuculwe ngexesha elisusela ku-2014 ukuya ku-2019. lingcebiso ezivela kuphononongo Iwe-NSC yango-2019 ziye zadityaniswa zaba ngamanyathelo okuphucula kwaye sele ziphunyeziwe. Kugqitywe ekubeni noxa ekho amathuba okuphucula, iNSC kwiYunithi Esebenza Ngenyukliya ikhuseleke ngendlela eyamkelekileyo ukuba iqhubeketse isetyenziswa kwiLTO.

I-NIL-01 inemiyalelo ephathelele ukuthutha, ukulahla, nokugcina inkcitho ekhutshwayo eneradiyeyishini. Inkcitho ekhutshwayo eneradiyeyishini ekwinqanaba eliphantsi neliphakathi -- yexeshana (low- and intermediate-level waste – short-lived [LILW-SL]) kune nenkcitho yenqanaba eliphezulu (high level waste [HLW]) iyaveliswa eKoeberg ngenxa yomsebenzi, ukulungisa, notshintsho olwenziwa khona. Sithethanje, amafutha asetyenzisiweyo (HLW) agcinwa ngokukhuselekileyo esizeni kumachibi amafutha asetyenzisiweyo nakwii bhokisi ezomileyo (dry-storage casks). Amafutha asetyenzisiweyo anokudluliselwa kwisakhiwo sexeshana sokugcina esiphakathi (centralised interim storage facility [CISF]), esakhiwa liZiko Lelizwe Lokulahlwa Kwenkcitho Eneradiyeyishini [National Radioactive Waste Disposal Institute [NRWDI]] nesiphantsi kweenkqubo zogunyaziso ezifunekayo [14]. Amachibi amafutha asetyenzisiweyo nezakhiwo zokugcina ii-dry cask kwisiza ziza kuqhubeleka zietyenziswa ukuze kugcinwe amafutha asetyenzisiweyo ebudenibonke bexesha leLTO. Umthamo owongezelelwego wokugcina iidry cask ofunekayo uxhomekeke kugunyaziso Iwe-NNR.

I-LILW-SL ingcitywa okanye ifakwa kwimigqomo ehambisana nezinto ezijongwayo kwinkcitho ekhutshwayo eyamkelekayo eVaalputs kwaye zigunyaziswa yiNNR. Izinto ezijongwayo ukuze inkcitho ekhutshwayo yamkeleke zichaza iimpawu zeradiyeyishini, zoomatshini, zeekhemikhali, nezebhayoloji zepakeji yenkcitho ukuze kuqinisekiswe ukuba inkcitho ekhutshwayo igqunywa ngendlela eyiyo kwaye ingagcinwa ngendlela ekhuselekileyo. UESkom ucele ngokusemthethweni iNRWDI ukuba ilungiselele umthamo ongakumbi wokugcina iLILW-SL ngenxa yeLTO. Umthamo oseleyo wokugcina usanele ukuze usingatthe inkcitho ekhutshwayo eveliswe ngexesha leLTO. Umthamo ongakumbi wokugcina uxhomekeke ekugunyazisweni yiNNR.

lindlela zokugcina inkcitho ekhutshwayo yaseKoeberg zeLILW-SL nezeHLW zihambelana neendlela ezisetyenziswa kumazwe ngamazwe kwaye zinomngcipheko ophantsi kakhulu kukhuseleko, kwimpilo, nakokusingqongileyo.

Ekuggibeleni, kuboniswe ukuba akukho mngcipheko ungfanelekanga kukhuseleko, kwimpilo, okanye kokusingqongileyo xa kuqhutyekwa kusetyenziswa iKoeberg eminye iminyaka eyi-20. Isicelo sokusebenzisa iKoeberg ukuya kutsho kwiminyaka eyi-60 siya kugqitywa yiNNR.

YEKAWONKE-WONKE

1. INJONGO

Injongo yolu xwebhu lwenkcazel o kawonke-wonke (IPID) kukunika uluntu inkcazel o eyaneleyo ngesicelo sikaEskom asifake kuMlawuli Wenyukliya Elizweni (NNR) sokuba kutshintshwe iLayisenisi Yesitishi Senyukliya (NIL-01) ukuze kuqhutyekwe kusetyenziswa iSitishi Sokuphehlia Umbane Wenyukliya SaseKoeberg (iKoeberg) nasemva kwe-21 kaJulayi 2024, kongezwe eminye iminyaka eyi-20, ukuya kwi-21 kaJulayi 2044 kwiYunithi 1 kuze kuyiwe kwi-9 kaNovemba 2045 kwiYunithi 2. Esi sicelo sibizwa ngokuba sisicelo sokwandisa ixesha lokusebenza kuphehlwa umbane eKoeberg (long-term operation [LTO]) kwaye safakwa kwiNNR ngokuhambisana nemithetho yelizwe enxibelelene nemiqathango esekwe yiNNR. Isigunyaziso sokuba iKoeberg iqhubek eisebenza eminye iminyaka eyi-20 siza kuggitywa yiNNR emva kokulandelwa kwenkqubo efanelekileyo, naxa izanelisile ukuba ziyavakala izizathu zokuqhubeka isetyenziswa ngendlela ekhuselekileyo.

2. UMBANDELA (UBUBANZI BOLUXWEBHU)

I-PID iqulethe inkcazel o malunga nemingcipheko yeradiyeyishini kukhuseleko, kwimpilo, nakokusingqongileyo enxulumene nesicelo se-LTO, umthetho welizwe, kwakunye nemiqathango enxulumeneyo esekwe yiNNR.

3. ISAKHIWO NOMONGO

I-PID iqala ngengcombolo yemvelaphi yeLTO (Isahluko 5), kulandele iziseko zomthetho kunye nesakhelo semiyalelo yokulawula iLTO (Isahluko 6). Icandelo 6.1 lenza amaggabantshintshi ngengcaciso yomqulu oneenkukatha zokhuseleko IweKoeberg (safety case) kwaye libhekisela kumacandelo anxibeeleneyo akwiPID anento yokwenza nokhuseleko. I-PID emva koku inikezela ngenkcazel o yomfaki-sicelo nengcaciso yesiza kwiSahluko 7 neSahluko 8, ngokulandelana. Emva koku kulandela ingcaciso yomsebenzi owensiwa eKoeberg (kwiSahluko 9) ukuze umfund iabe nofifi ngokwenzeka kwesi sitishi sombane.

Isahluko 10 sithetha ngemingcipheko yokhuseleko, impilo, nokusingqongileyo, kulandele izizathu zobugcisa ezithethelela iLTO kwakunye namalungiselelo okulawula inkampani jikelele, kwiSahluko 11 nakwiSahluko 12, ngokulandelana. Isahluko 11 siquka inkcazel o ngeziphumo zohlolo lokhuseleko olwenziwe eKoeberg, ikakhulu ezinxulumene neziphumo zokuguga kwesi sitishi kunye neenkqubo ejijongene neenkqubo ezibalulekileyo ezidibene nokhuseleko ezinjengokukhuselwa kwiradiyeyishini kunye nezicwangciso ezikhoyo xa kungakho iimeko zikaxaxeka zengozi yenyukliye (emergency planning). Oku kuquka indima yeInternational Atomic Energy Agency (IAEA) yokuphononongwa ziingcali zenyukliya zamazwe ngamazwe, imiba yokhuseleko yenqubo yokusebenzisa ixesha elongezelelwego (SALTO), kunye nokuhlolwa kokhuseleko IweKoeberg okwaziwa ngokuba luhlolo lokhuseleko

YEKAWONKE-WONKE

Iwamaxesha athile (PSR). Zonke ezi ntlobo zohlololo lokhuseleko zenziwa ukuze kukwazeke ukuthatha isiggibo sokuba iLTO ingakwazi ukuxhaswa ngendlela ekhuselekileyo na.

Isahluko 13 neSahluko 14 zithetha ngokulawulwa kwenkcitho eneradiyeyishini ekhutshwayo. Umqukumbelo kanye noluhlu lweencwadi ezisetyenzisiweyo ukulungisa olu xwebhu oluneenkukacha zokhuseleko (iireferensi) nazo zinikezelwe.

4. IINGCACISO, IZIFINYEZO KUNYE NEZHUNQUELO, NEEMPAWU ZEEKHOMPWUNDI

4.1 lingcaciso

| Ibinzana | Ingcaciso |
|------------------------|---|
| Idowusi engenileyo | Ubungakanani bamandla afakwe yiradiyeyishini entweni, alinganiswa nge-grey (Gy), i-milligray (mGy), okanye i-microgray (μ Gy). |
| Imveliso ze-activation | Ukuveliswa kwee-radionuclides okungacetywanga kwisipholisi seriyektha, kwiimathiriyali zesakhiwo, neemathiriyali ezikhuselayo okubangelwa kukuchanabeka (exposure) kwii-neutrons. |
| I-bioaccumulation | Ukuqokelelana kwee-radionuclides kwisidalwa esitya ukuya okanye esisela amanzi anemathiriyali eneradiyeyishini. |
| Igridi | Intambo ezhambisa umbane ukusuka kwisitishi esiwuphehlayo ukuya kubasebenzisi bombane. |
| Isithintelo | Isilinganiso sedowusi enye (isithintelo yedowusi) elindelekileyo nenxulumene nomthombo okanye somngcipheko omnye (isithintelo yomngcipheko) esisetyenziswa kwiimeko ezicetyiwego umntu aza kuchanabeka ngazo ukuze kuphuculwe ukukhuselwa komthombo weradiyeyishini, kwaye iba ngumda ekuchazeni ukhetho olukhoyo lokuphuculwa. i) Ekuchanabekeni emsebenzini, sisithintelo kwidowusi enye kubasebenzi efunyenwe yaza yasetyenziswa ngababalisi nangabanini layisenisi ukuze base umkhamo wokhetho lokuphuculwa kokhuseleko kumthombo weradiyeyishini. ii) Ekuchanabekeni kukawonke-wonke, isithintelo sedowusi sisilinganiso esinxibelelene nomthombo weradiyeyishini esifunyenwe okanye esigunyaziswe yibhodi elawulayo karhulumente, kucingwa ngeedowusi ezivela kumsebenzi ocetyiwego wayo yonke imithombo ephantsi kolawulo. iii) Isithintelo sedowusi yomthombo weradiyeyishini ngamnye injongo yaso, phakathi kwezinje izinto, kukuqiniseka ukuba zizonke iidowusi zomsebenzi ocetyiwego wayo yonke imithombo ephantsi kolawulo zihlala zingaphantsi kwedowusi esikelweyo. iv) Ekuchanabekeni kwezamayeza, isithintelo yedowusi sisiliganiso esinxibelelene nomthombo weradiyeyishini esisetyenziswa ukukhusela abongi nabathuthuzeli bezigulane ezinyangwa ngeenkubo ezisebenzisa iradiyeyishini, nokukhusela amatshantliziyo xa echanabeke kwinkqubo yophando lwebhayoloji nonyango. |

YEKAWONKE-WONKE

| Ibinzana | Ingcaciso |
|--|---|
| | v) Isithintelo somngcipheko sisilinganiso esinxibelelene nomthombo esinikela ngomgangatho osisiseko wokhuseleko kubantu abangabona basemngciphekweni kumthombo weradiyeyishini. Lo mngcipheko unganamathuba okwenzeka xa kunokuha isiganeko esingacetywanga esidala idowusi namathuba okuba kubekho umonakalo ngenxa yalo dowusi. Izithintelo zomngcipheko zihambisana nezithintelo zedowusi, kodwa zisebenza ekuchanabekeni okungenzeka. |
| Imiphumo engakho | Umonzakalo enyameni nakumalungu ngenxa yokufa kweeseli. Uphawulwa ngedowusi esikelweyo nangokunyuka kokuqatsela kwentsabelo xa idowusi inyuswa ngakumbi. |
| Uhlalutyo lokhuseleko kwimiphumo engakho | Uhlalutyo lokhuseleko kwimiphumo engakho lujoliswa ekuqinisekiseni ukuba imisebenzi yokhuseleko kune neenkubo, izakhiwo, neekhomponenti ezifunekayo, xa zidibene nezenzo zombhexeshi (apho kufanelekileyo), ziyakwazi, kwaye zisebenza kakuhle, ekugcineni ukuphuma kweradiyeyishini kukumanqanaba amkelekileyo yaye kukumda owaneleyo wokhuseleko. |
| Idowusi | Sisilinganiso samandla afakwa yiradiyeyishini kulo nto ajoliswe kuyo. |
| Ireyithi yedowusi | Yidowusi yeradiyeyishini efakwayo (engenayo) ngeyunithi yexesha. Ilingsanisa nge-millisiever (mSv) ngeyure. |
| Idowusi yoqobo | Ukudityanisa kweedowusi ezilinganayo kuwo onke amalungu, zilungelelaniswe ukuze kucingelwe ubuntununtunu belo lungu kwiradiyeyishini. Ibalwa kumzimba wonke, ichazwa ngee-sievert (Sv), ii-millisiever (mSv), okanye ii-microsievert (μ Sv). |
| Ukutyebisa | Nayiphi inkqubo yokunyusa umlinganiselo we-U-235 kumxube wee-Uranium Isotopes iye kumanqanaba angaphezulu kunalawo afumaneka kwindalo, ekubenit ngokwendalo i-U-238 iyila malunga ne-99,274% kwaye i-U-235 imalunga ne-0,720%. Zikho nezinye ii-isotope ezinjenge-U-234 ne-U-236, kodwa ziyinxalenye encinane nje umzekelo. i-U-234 yi-0,005% kuphela. Okuseleyo kuyilwa yi-U-232, i-U-233, ne-U-236. |
| Idowusi elinganayo | Yidowusi efunxwe lilungu lomzimba, elungelelanisiweyo ukuze kujongwe ukusebenza kolo hlubo lweradiyeyishini. Ibalwa kwilungu lomzimba ngalinye, ichazwa ngee-sievert (Sv) okanye ii-millisiever (mSv). |
| Uyilo | Uyilo |
| Isiqingatha sobomi, ngokwebhayoloi | Lixesha lesiqingatha see-radionuclide ezimele zikhutshwe emzimbeni. |
| Isiqingatha sobomi, emzimbeni | Lixesha elifunekayo ukuze inani elithile lee-nuclide ezithile ezineradiyeyishini ziphelelw ngamandla zibe sisiqingatha senani lezo bezikho ekuqalen. |
| Iradiyeyishini | Ukukhutshwa kwamandla njengamaza e-electromagnetic okanye njengamasuntswana ashukumayo e-subatomic, ngakumbi amasuntswana anamandla aphezelu abangela i-ionization. |
| Amafutha aneradiyeyishini | Ngamafutha enyukliya aye achanatywa kwiradiyeyishini yeenyutroni kwiriyektha yenyukliya, kodwa angade afike kwinqanaba lokukhupha amandla ebiyilelw lona (design burnup). |

YEKAWONKE-WONKE

| Ibinzana | Ingcaciso |
|---|--|
| Ukulawulwa kolwazi | Indlela edityanisiweyo nesebenzisa inkqubo ethile yokuchonga, ukufumana, ukutshintsha, ukupuhhlisa, ukusasaza, ukusebenzisa, ukwabelana, nokulondoloza ulwazi oludibene nokuphunyezwa kweenjongo ezichaziweyo. |
| Ukusebenzisa ixesha elongezelelwego | Ukusetenyenziwa kwestisho ukugqitha kwixesha ebiesibekelwe lona ngaphambil, ngokomzekelo, ixesha elisekw kwilayisenisi, uyilo lwestisho (plant design), imilinganiselo, ilayisenisi kunye/okanye imiyalelo, okuxhaswa kukuhlolwa kokhuseleko, kucingwa ngeenkqubo neenkalo ezilinganisela ubomi boomatsihini, izakhiwo, neekhomponenti (systems, structures, and components [SSC]). |
| Ingozi yenyukliya | Sisiganeko okanye uthotho lweziganeko ezikhokelela ekuphumeni okungacetywanga kwezinto ezineradiyeyishini okanye ukuchanabeka kwiradiyeyishini engabangela ukuba ugqithe kwi-1 mSv yedowusi kuluntu okanye i-50 mSv yedowusi kubasebenzi. |
| Uhlolo lokhuseleko lwamaxesha athile | Luhlolo lokhuseleko kwisakhiwo esikhoyo olwenziwa rhoqo kwixesha elimisiweyo ukuze kujongwane nemiphumo eyandayo yokuguga, utshintsho, amava okusebenza, uphuhliso lobugcisa, neenkalo zesiza. Injongo yalo kukuqinisekisa ukuba ukhuseleko luphezulu ngalo lonke ixesha lokusebenza kweso sakhiwo. |
| Idowusi eqikelelwayo | Idowusi ekulindelwe ukuba ifunyanwe ukuba amanyathelo acetyiwego okukhusela awathathwanga. |
| Isilwanyana okanye isityalo sembekiselo [Reference animal or plant (RAP)] | Inte ecingelwayo eneempawu zobomi zohlobo oluthile lwestilwanyana okanye isityalo (ngendlela echazwe ngokohlahlelo lwaso lentsapho) eneempawu ezichaziweyo zokwakheka, zamalungu nemballi yobomi. I-RAP ingasetyenziselwa iinjongo zokuchaza ukuchanabeka kwidowusi nemiphumo yedowusi, kolo hlubo lwentu ephilayo. |
| Umntu omeleyo | Ngumntu, ekuza kusoloko kuqikelelwego ngaye, ufumana idowusi emela oyena mntu uchanabeke kakhlulu kubemi. Lo mntu umeleyo ulingana, kwaye uthatha indawo, yemilinganiselo ephakhathi yabantu abakwiqela elikwimeko embi. |
| Umngcipheko | Kukuxhaphaka nemiphumo yesiganeko, echazwa ngokuthi "ngamawele amathathu omngcipheko" ephendula le mibuzo mithathu ilandelayo: <ol style="list-style-type: none"> Yintoni engonakala? Mangananani amathuba ukuba yenzeke? Iza kuba yintoni imiphumo ukuba ingenzeke? Kwimeko yeradiyeyishini, ngamathuba okuba kubekho isiphumo esithile sempilo (njengomhlaza) esenzeka kumntu okanye kwiqela labantu ngenxa yokuchanabeka kwiradiyeyishini. |
| Uhlolo lokhuseleko | Kwimeko ye-PSR, uhlolo lokhuseleko lwenziwa njengendlela yokuvavanya ukuthotyelwa kwemiqathango o efunekeyo kukhuseleko kuzo zonke izakhiwo nemisebenzi yesitishi neyokuggiba ngamanyathelo amele athathwe ukuze kuqinisekiswe ngokhuseleko. |
| Amafutha asetyenzisiweyo | Amafutha enyukliya aye afakwa kwiriyektha yenyukliya ukuze akhuphe amandla okwenza umbane, ade afikelele kwinqanaba lokuba loo mafutha aphelelwego ngamandla awasasebenziseki ekuqhubeni ireaction yenyukliya. La mafutha ayakhutshwa kwindlwana yeriyelektha aze agcinwe ngaphantsi kwamanzi kwiishelufu zokugcina amafutha kumadama amafutha asetyenzisiweyo. |

YEKAWONKE-WONKE

| Ibinzana | Ingcaciso |
|--------------------------|--|
| Imiphumo ethelekelelwayo | Yimiphumo ebangelwa ngumonakalo kwiseli enye, njengomhlaza neziphene kwimfuzza. Ukuxaphaka kwesiganeko, hayi ubuqatha baso, yanda ngokunyuka kwedowusi. Ukwenzela ukhuseleko, sithatha ngokuba ayikho idowusi esisisikelo. |

4.2 Izishunqulelo nezifinyezo

| Isishunqulelo/ Isifinyezo | Ingcaciso |
|------------------------------|--|
| AADQ | Umthamo ogunyazisiweyo wokuphumayo ngonyaka (Annual authorised discharge quantity) |
| ALARA | Phantsi kangangoko kunokufikeleka (As low as reasonably achievable) |
| ALARP | Phantsi kangangoko kunokwenzeka (As low as reasonably practical) |
| AMP | Inkqubo yokulawula ukuguga (ageing management programme) |
| DMRE | Isebe Lobuncwane Bezimbiwa Namandla (Department of Mineral Resources and Energy) |
| EDF | I-Électricité de France |
| EPD | I-electronic personal dosimeter |
| EPRI | Iziko Eliphanda Ngamandla Ombane (Electric Power Research Institute) |
| UEskom | Eskom Holdings SOC Ltd |
| GSR | Izinto eziqhelekileyo ezifunekayo kukhuseleko (General safety requirements) |
| Gy | Gray |
| HLW | Inkcitho eneradiyeyishini ekhutshwayo ekwinqanaba eliphezulu (High level waste) |
| IAEA | Iarhente Yamazwe Ngamazwe Yamandla EAthomu (International Atomic Energy Agency) |
| I&C | Ukufakela izixhobo nolawulo loomatshini (Instrumentation and control) |
| ICRP | Ikomishini Yamazwe Ngamazwe Yokukhusela Kviradiyeyishini (International Commission on Radiological Protection) |
| ILW | Inkcitho eneradiyeyishini ekhutshwayo ekwinqanaba eliphakathi (Intermediate level waste) |
| INPO | Iziko Lemisebenzi Yombane Wenyukliya (Institute of Nuclear Power Operations) |
| ISO | Umbutho Wamazwe Ngamazwe Wemilinganiselo (International Organisation for Standardisation) |
| LILW | Inkcitho eneradiyeyishini ekhutshwayo ekwinqanaba eliphantsi neliphakathi leradiyeyishini (Low and intermediate level waste) |
| LILW-SL | Inkcitho eneradiyeyishini ekhutshwayo ekwinqanaba eliphantsi neliphakathi leradiyeyishini yexeshana (Low and intermediate level waste short lived) |

YEKAWONKE-WONKE

| Isishunqulelo/ Isifinyezo | Ingcaciso |
|--------------------------------------|--|
| LLW | inkcitho eneradiyeyishini ekhutshwayo ekwinqanaba eliphantsi (Low level waste) |
| LPZ | Ummandla wokucebelu inyathelo lokhuseleko lwexesha elide (Long term protective action planning zone) |
| LTO | Ukusebenzisa ixesha elongezelelwego kunelo beliphunyeziwe ekuqaleni (Long-term operation) |
| mWe | Megawatt (iyunithi yombane) |
| MWth | Megawatt (iyunithi yamandla awenziwego eboniswa ngobushushu) |
| Necsa | Inkampani Yamandla Enyukliya YaseMzantsi Afrika (South African Nuclear Energy Corporation) |
| NIL | Ilaisenisi yesitishi senyukliya (Nuclear installation licence) |
| NNR | Umlawuli Wenyukliya Welizwe (National Nuclear Regulator) |
| NNRA | Umhetho Womlawuli Wenyukliya Welizwe (National Nuclear Regulator Act) |
| NOU | Iyunithi Esebenza Ngenyukliya |
| NRWDI | Iziko Lelizwe lenkcitho eneradiyeyishini ekhutshwayo (National Radioactive Waste Disposal Institute) |
| NSC | Inkqubo yokhuseleko lwenyukliya (Nuclear safety culture) |
| NSRB | Ibhodi Ehlola Ukhuseleko Lwenyukliya (Nuclear Safety Review Board) |
| PAZ | Ummandla Wokuthatha Amanyathelo Okuthintela (Precautionary Action Zone) |
| PID | Uxwebhu Lokwazisa Uwonke-wonke (Public Information Document) |
| PP | Iphepha Elicacisa Ukuma (Position Paper) |
| PSR | Uhlolo lokhuseleko lwamaxhesa athile (Periodic Safety Review) |
| PWR | Iriyektha Yamanzi Axinzelelwego (Pressurised Water Reactor) |
| RD | Amaxwebhu Ezinto Ezifunwa Yimimiselo (Regulatory Requirements Documents) |
| RG | Isikhokelo Semimiselo (Regulatory Guide) |
| SALTO | linkalo Zokhuseleko Zokusebenzisa Ixesha Elongezelelwego (Safety Aspects of Long Term Operation) |
| SAR | Ingxelo Yokuhlalutywa Kokhuseleko (Safety Analysis Report) |
| SSCs | Oomatshini, izakhiwo, neekhomponenti (Systems, structures and components) |
| SSG | Isikhokelo sokhuseleko olungqalileyo (Specific safety guide) |
| SSRP | Imilinganiselo yokhuseleko noqheliselo lwemimiselo (Safety standards and regulatory practices) |
| Sv | I-sievert |

YEKAWONKE-WONKE

5. INGCOMBOLO YEMVELAPHI YOKUSEBENZISA ISITISHI IXESHA ELONGEZELELWEYO

Ehlabathini jikelele, kuyinto eqhelekileyo ukongezwa kwexesha leelayisenisi zokusebenzisa izitishi zombane zenyukliya. Amava abonisa ukuba izitishi eziphehla umbane wenyukliya ezinjengeKoeberg zingakwazi ukubhexeshwa ngendlela ekhuselekileyo kangangeminyaka engaphezu ko-40. Ukongezwa kwexesha lokusebenzisa isitishi senyukliya kuyindlela eyonga iindleko, eyenza amazwe akwazi ukunikela ngamandla azinzileyo ngendlela enceda ekunciphiseni ukungcoliswa komoya yikhabhoni. Ukongezelela ekuphumezeni kweKoeberg indima ebalulekileyo kokusingqongileyo kuqoqosho eMzantsi Afrika, iKoeberg iza namathuba amahle engqesho yeengcali kabantu belizwe nabengingqi.

EMzantsi Afrika, iiyuniti ezimbini zenyukliya zaseKoeberg zikuphela kweeyuniti ezivelisa umbane osisiseko kwinxalenye esemazantsi elizwe. Zinceda ekuzinziseni igridi yombane yelizwe. Amandla avela kwinyukliya aneenzuko ezininzi ezahlukileyo eMzantsi Afrika, kwaye kule meko ikhoyo, iLTO yaseKoeberg iza kunceda ekulibaziseni ukutyalwa kwemali eninzi kubuxhakaxhaka bokwakhiwa kwezitishi ezintsha zokuphehla umbane. Ngokuqhelekileyo iiprojekthi (projects) ezifana nale ezoneza ixesha lento ebisele ikho ziba nomngcipheko omncinane kunezifanayo eziqalwa phantsi, ngamanye amazwi xa kuqalwa phantsi ukwakhiwa. Ngokufanayo noko kuqheleke kwiimarike zehlabathi ezivelisa umbane, ukongeza ixesha lokusebenzisa isitishi sombane senyukliya eMzantsi Afrika kuyindlela eyonga iindleko yokufumana indlela yokuvelisa umbane osisiseko. Inyukliya ivelisa ikhabhoni (izinto ezingcolisa umoya) encinci esasazwa emoyeni kwaye iyafana neyokuphehla umbane kusetyenziswa umoya kule nkalo [15].

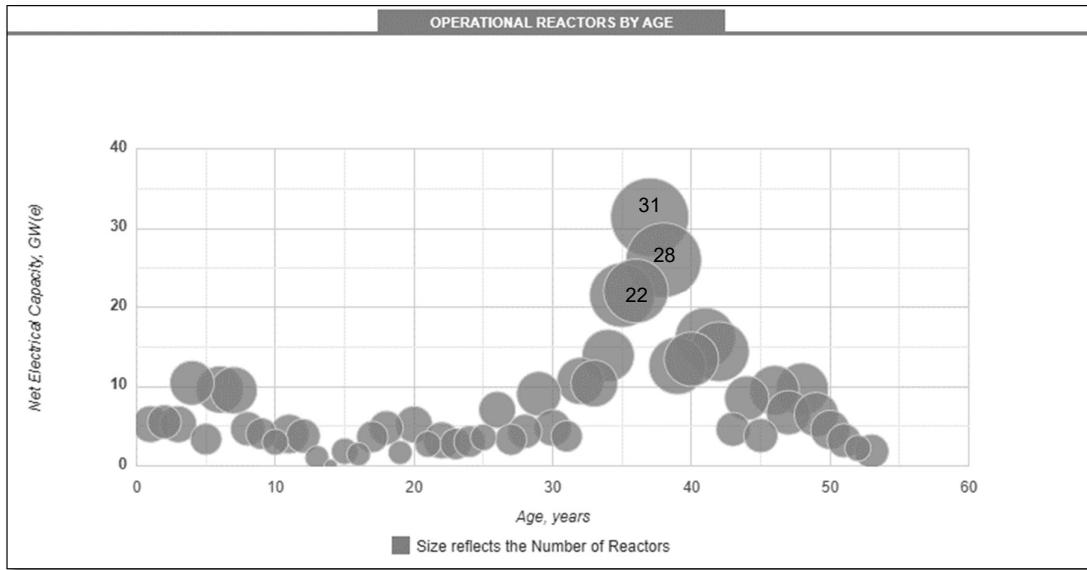

YEKAWONKE-WONKE

Umfanekiso 1 ubonisa inani leeyunithi zeriyektha zombane wenyukliya ezisebenzayo sithethanje kwilizwe ngalinye [3]. Zizonke ziyi-441 iriyektha zenyukliya. I-USA inezona yunithi zeriyektha zisebenzayo zininzi kwaye ziyi-93 zizonke, kulandele iFransi kwindawo yesibini eneeyunithi zeeriyektha eziyi-56.

Umfanekiso 1: Inani leeriyektha zombane wenyukliya nomthamo wombane eziwuvelisayo (GWe) ehlabathini. [3]

YEKAWONKE-WONKE

Umfanekiso 2: Imveliso yombane nobudala beyunithi yeriye ktha yombane wenyukliya esebeenzayo [3]

Umfanekiso 2 uchaza imveliso yombane nobudala beeyunithi zeeriye ktha zombane wenyukliya ezisebenzayo [3]. Kukho iiyunithi zeeriye ktha zombane wenyukliya eziyi-22 ehlabathini jikelele ezineminyaka eyi-36 zisebenza. Kukho iiriye ktha zenyukliya eziyi-133 oko zisebenza iminyaka eyi-40 nangaphezulu, kwaye eyona riyektha indala isebeenzayo ineminyaka engayi-53 isebeenzayo (Nine Mile Point Unit 1 eNew York). Yagunyazisa yiKomishini Elawula Inyukliya YaseUnited States (USNRC) ukuba yandise ixesha layo lokusebenza liye kwiminyaka eyi-60 ngo-2006. NgoJanuwari 2022, iUSNRC ibihlaziye ilayisenisi zokusebenzisa zeeyunithi zeeriye ktha zombane wenyukliya eziyi-94. Iphinde yakhupha ezinye ilayisenisi ezihlaziyiweyo (ezandisa ixesha lokusebenzisa izitishi ukusuka kwiminyaka eyi-60 ukuya kwiminyaka eyi-80) kwiiriye ktha zombane wenyukliya ezintandathu, kwaye ezinye ezisithoba zisaqwalaselwa [4].

EFransi, i-21 kwiiriye ktha zombane wenyukliya eziyi-56 ezisebenzayo zineminyaka eyi-40 okanye ngaphezulu, kwaye iBugey-2 (eyona yunithi indala isebeenzayo) yaqala ukuthulula umbane kwigridi yombane ngonyaka ka-1978 [3].

Njengoko kunjalo ngabalawuli benyukliya kumazwe ngamazwe, isigqibo seNNR sokugunyazisa okanye sokukhaba isicelo se-LTO sisekelwe ekubeni iKoeberg ikwazile na ukubonisa ukuba akukho mngcipheko unga fanelekanga kukhuseleko, impilo, okanye kokusingqongileyo nokuba imiqathango efunekayo echazwe kwimiialelo ye-LTO [2] iye yafezwa kwaye iza kuqhube ka ifezwa ebudenibei be-LTO. Le iboniswa ngohlolo olupheleleyo noluphangaleleyo lwemeko yangoku neyexesha elizayo loomashini besitishi, izakhiwo kunye neekhomponenti ezenza umsebenzi obalulekileyo wokhuseleko. Uhlolo lumele lungqine ukuba iinkqubo neenkqubo, kuqka iinkqubo zokulawula ukuguga ezikhokela ukulawulwa

YEKAWONKE-WONKE

koomatshini neekhomponenti zokusebenza ezinxibelelene nokhuseleko, ziyafilelala koku kufunwa yimimiselo.

Izicwangciso zokwandisa ixesha lokusetyenziswa kwezitishi zombane wenyukliya ziphandwa iminyaka emininzi (~iminyaka eyi-10 nangaphezulu) ngaphambi kokuphela kwexesha lelaysenisi ekhoyo ngoku. Zininzi izizathu zokwenza le nto; ngokomzekelo kusenokufuneka kutyalwe imali ekutshintsheni oomatshini neekhomponenti ezinkulu uphononongo namava omsebenzi abonisa ukuba ziyimfuneko ukuze ziqhubeke zisebenza ngendlela ekhuselekileyo nenokuthenjwa lonke ixesha leLTO. Oku kufuna ixesha lokuceba. Uphando lukaEskom malunga nokuba ingenzeka na iLTO Iwaqala malunga no-2010, kwaye uthethathethwano lokuqala ne-NNR Iwenzeka kamsinya emva koko, yaza i-IAEA yaqala ukubandakanyeka ngo-2015.

Njengezikhululo zombane wenyukliya ezininzi zamazwe ngamazwe, iKoeberg iye yalungisa izinto ezininzi yaza yatshintsha izixhobo zokusebenza ezinkulu kule minyaka yi-10 idlulileyo ukuze iqiniseke ukuba iqhubeka ikwimeko entle kwaye ingazuza kwithuba lokwandisa ixesha lokusebenza kwayo, ukuba i-NNR iyavuma. likhomponenti ezinkulu ezitshintshwayo eKoeberg ziinjini zomphunga. Ezinye iikhomponenti ezisele zitshintshiwe zitanki ezigcina amanzi okupholisa amafutha asetyenzisiwego kunye neentloko zomphanda weriyektha (reactor vessel head). Kwenziwe utshintsho nophuculo kwizinto eziliqela eKoeberg ukuze kusetyenziswe izinto esifunde eFukushima ezinjengeenjini ezingakumbi ezinokuhanjiswa ukuze zifake umbane kwizixhobo ezibalulekileyo, ukulungiselela omnye umthombo wamanzi okupholisa, kunye nezixhobo ezinokuhanjiswa zokususa inkcitho ebangelwe yinyikima.

Amava okusebenza kwizitishi zenyukliya abonise ukuba kukho iingxaki zobunjineli ezidibene nokutshintshwa kweekhomponenti ezinkulu kunye, ngokukhethekileyo, iinjini ezivelisa umphunga. (Jonga Umfanekiso 3 ukuze ubone injini yomphunga.) Omnye umzekelo ophawulekayo sisiganeko saseSan Onofre Nuclear Generating Station (eSONGS) uYuniti 2 noYuniti 3. Ngokwenkczelo evela kwesi siza se-USNRC, uYuniti 2 noYuniti 3 eSONGS baqala ukusebenza ngo-1983 nango-1984, ngokulandeelana. linjini ezivelisa umphunga zatshintshwa kuYuniti 2 nakuYuniti 3 ngo-2010 nango-2011, ngokulandeelana, kulindelwe ukuba ukwandisa ixesha lokusebenza lwezi yuniti liye kwiminyaka eyi-60. Kodwa ke, emva kwexesha elifutshane esebeanza, ngo-2012, uYuniti 3 wavalwa kulandelwa amaxwebhu okusebenza (working procedures) ngenxa yokuvuza kwetyhubhu zenjini yomphunga. UYuniti 2 wayesele evaliwe ukuze kongezwe amafutha ngelo xesa. Kwafunyaniswa ukuba iityhubhu ezintsha zenjini yomphunga zaziye zakhawuleza ukuguga, nto leyo eyayingalindelekanga neyayingenakulungiseka ngokoqoqosho. Loo nto yakhokelela ekubenai avalwe ngokusigxina uYuniti 2 kunye noYuniti 3 eSONGS ngo-2013. Idowusi yeradiyeyishini kuluntu eyayibangelwe kukuvuza kwetyhubhu yenjini yomphunga eSONGS kwakuqikelewa ukuba ungaphantsi kwe-0,05% yesisikelo sonyaka esibekwe yimiylelo kwaye ayizange ilubeke esichengeni uluntu.

YEKAWONKE-WONKE

iKoeberg ilawula imingcipheko efana nalo ngokunamatela ngokungqongqo kwimilinganiselo yomgangatho noyilo, ifake amava okusebenza nezinto ezifundwe kwiziganeko ezinjengesaseSONGS, ize iqiniseke ukuba kusetyenziswa abavelisi, abasebenzi, neekhontraktha ezifanelekileyo, ezifundileyo nezinamava xa kusensiwa umsebenzi.

Umfanekiso 3: linjini ezivelisa umphunga ezintsha zaseKoeberg ziyafika eMzantsi Afrika

6. ISISEKO SOMTHETHO NESAKHELO SEMIYALELO YE-LTO

Umhetho Womlawuli Wenyukliya Welizwe (NNRA) 47 wango-1999 unika i-NNR igunya lokunkika okanye lokutshintsha isigunyaziso senyukliya (ilayisenisi zenyukliya) kwaye nelokulawulwa ngemiyalelo iindawo ezisebenza ngenyukliya ezinjengeKoeberg [35]. Inombolo yoMmiselo karhulumente, R.266, ophathelele iLTO [2], nesikhokelo semiyalelo ye-NNR LTO esihamba nayo [12], sichaza izinto ezifunekayo kwLTO. UESkom kufuneka afake isicelo se-LTO ngokwecandelo 21(1) loMthetho We-NNR, kwaye isicelo kufuneka sixhaswe yingcaciso epheleleyo ngokhuseleko lwestishi ukuze kuboniswe ukuba iKoeberg iza kuqhubeaka iseenza ngendlela ekhuselekileyo ebuden'i be-LTO. Isakhelo semiyalelo inkcitho eneradiyeyishini ekhutshwayo ichazwa kwicandelo 13.1 kolu xwebhu.

YEKAWONKE-WONKE

6.1 Uxwebhu olunengcaciso yokhuseleko exhasa isicelo se-LTO

Isicelo se-LTO sixhaswa luxwebhu olunengcaciso ngokhuseleko (safety case) oluthunyelwe kwi-NNR ukuze igunyaziswe. Ingaciso ngokhuseleko iza nobungqina obubhaliwego nezibakala ezibonisa ukuba akuyi kubakho mngcipheko ungeyomfuneko kukhuseleko, kwimpilo, okanye kokusingqongileyo ukuba iKoeberg ingaqhubeka isebenza iminyaka engaphaya kwe-20 emva kwexesha eyayilibekelwe kwilayisenisi leminyaka eyi-40. Ingaciso ngokhuseleko isekelwe kwiintlolo zokhuseleko ezenziwego ukuze kuxhaswe iLTO. Ngokuhambisana noko kufunwa yi-NNR, uhlolo lokhuseleko lumele luuke i-PSR yaseKoeberg. I-PSR luhlolo oluneenkukacha Iweenkalo zokhuseleko eziyi-14 ukuze kubonwe izikhewu ezikhoyo ngokuphathelele izinto ezifunwa kukhuseleko ngamazwe ngamazwe, lilizwe, nemigaqo ekufuneka ilandelwe yokhuseleko ebekiwego. linkalo zokhuseleko zidweliswe apha Itheyibhuli 1.

Itheyibhuli 1: Uludwe Iweenkalo zokhuseleko ezhohloliwego ebuden bePSR yaseKoeberg

| Umbandela | Inani | Umxholo wenkalo yokhuseleko |
|--|-------|---|
| Isitishi | SF-1 | Uyilo Iwesitishi |
| | SF-2 | Eyona meko yee-SSC |
| | SF-3 | Ukfaneleka kweekhomponenti |
| | SF-4 | Ukuguga |
| Uhlalutyo lokhuseleko | SF-5 | Uhlalutyo lokhuseleko kwimiphumo engakho |
| | SF-6 | Uhlolo lokhuseleko kwizinto ezinokwenzeka |
| | SF-7 | Uhlalutyo Iweengozi |
| Ingxelo yendlela ekuqhutywe ngayo namava okusebenza (OE) | SF-8 | Indlela oluqhuba ngayo ukhuseleko |
| | SF-9 | Ukusetyenziswa kwamava avela kwezinye izitishi nezinto ezifunyenwe kuphando |
| Ulawulo | SF-10 | Umbutho, iinkqubo zolawulo, nenqubo yokhuseleko |
| | SF-11 | linkqubo ezilandelwayo ezibhaliwego |
| | SF-12 | linkalo zabantu |
| | SF-13 | Ukucebelo imeko yongxamiseko |
| Okusingqongileyo | SF-14 | Ifuthe leradiyeyishini kokusingqongileyo |

YEKAWONKE-WONKE

Ngokutsho kwelAEA, uhlolo lokhuseleko lwamaxesha athile luyindlela esebebenzayo yokuqonda lulonke nje ukhuseleko lwestishi. Olu hlolo lusetyenziswa njengendlela yokuggiba enoba isitishi sombane wenyukliya siyafaneleka na ukusetyenziswa ixesha elingaphaya kweminyaka eyi-40 esasiyibekelwe ekuqaleni. I-PSR kuthethwa ngayo ngakumbi kwicandelo 11.4.

Uqheliselo neenkubo ezisebenzayo zokulawula ukuguga zingayithintela imiphumo embi ingachaphazeli ukuthembeka koomatshini besi sitishi ebuden bexesha leLTO. Ukuthatha inxaxheba kweKoeberg, nokusebenzisana kwayo, nemibutho yamazwe ngamazwe enjengoMbutho Wehlabathi Wababheshi Benyukliya (WANO), iÉlectricité de France (EDF), iElectric Power Research Institute (EPRI), i-IAEA, neminye emininzi kunenzozo ezibalulekileyo kwKoeberg. Ezi nzuko ziquka ukufumaneka kwamava amaninzi okusebenza, izinto ezifundwayo xa kusenziwa umsebenzi, kune namava ngokukodwa kwiinkubo zokuguga neenkubo zokulawula ukuguga (eyona nto lujoliswe kuyo uhlolo lweLTO) kune nokufikelela kwiingcali zeztishi zenyukliya ngophononongo loontanga. La mavva afakwa kwiinkubo zokulungisa nokuhlol iKoeberg ukuze kulawulwe okanye kuheliswe imiphumo yokuguga kwiiSSC kwaye kuhuculwe ukhuseleko xa kusetyenzwa nendlela eqhuba ngayo iKoeberg.

UMzantsi Afrika ucele i-IAEA ukuba iqhuba uphononongo loontanga lweSALTO. Isizathu sokukhetha uphononongo loontanga lweAEA, phakathi kwezinye, kukuba imiqathango efunwa yilAEA ifana kakhulu nemiqathango efunwa lilizwe kwiLTO kwaye iquka ezona zento zifanelekileyo ezenziwa kumazwe ngamazwe. Ngoko ke, eli phulo linike iKoeberg ithuba lokwamkela indlela efanelekileyo neqinisekisiweyo yokulungiselela iLTO ekhuselekileyo. Ububanzi obuqulathwe lophononongo loontanga lweSALTO bubonisiwe kwiltheyibhuli 2.

Itheyibhuli 2: Ububanzi obuqulathwe lophononongo loontanga lweSALTO

| Indawo | Umxholo | Ingaciso |
|--------|---|--|
| A | Inkampani nemisebenzi, isiseko selayisenisi yangoku, ulawulo lohlengahlengiso/lotshintsho | Ukujonga isakhono senkampani sokulawula iLTO ngokwenkubo-mgaqo yolawulo, iinkubo ezilandelwayo ezibhaliweyo, iinkubo, iindima, neembopheleleko. |
| B | Ububanzi nokuhluza neenkubo zesitishi ezimento yokwenza neLTO | Ukuggiba ngendlela nezinto ejongwayo xa kukhethwa iiSSC kulawulo lokuguga. Ukuqinisekisa enoba iinkubo zesitishi ejinjengeenkubo zokulungisa nezokuhlol ziyifanele iLTO. |
| C | Uhlolo lolawulo lokuguga, ukuhlolwa kweenkubo zokulawula ukuguga (AMP), nohlalutyo lokuguga okusikelwe ixesha (TLAA) kwiikhkomponenti zoomatshini | Ukuhlola ukuba ziyasebenza yaye ziphelele na iinkubo zokulawula ukuguga zeeSSC zoomatshini ezibalulekileyo kukhuseleko. |

YEKAWONKE-WONKE

| | | |
|---|--|--|
| D | Uhlolo lolawulo lokuguga, ukuhlola kwee-AMP, nee-TLAA ezinxulumeneyo zeekhomponenti ezisebenza ngombane ne-I&C | Ukuhlola ukuba ziyasebenza yaye ziphelele na inkqubo zokulawula ukuguga zeeSSC ezisebenza ngombane, ezeeinstrumenti, nezokulawula ezibalulekileyo kukhuseleko. |
| E | Ukuhlola ulawulo lokuguga, ukuhlola ii-AMP, nee-TLAA ezinxulumeneyo zezakhiwo | Ukuhlola ukuba ziyasebenza yaye ziphelele na inkqubo zokulawula ukuguga zeeSSC zezakhiwo ezibalulekileyo kukhuseleko. |
| F | Abasebenzi, ubuchule, nolawulo lolwazi kwilTO | Ukujonga enoba izicwangciso zokuqesha abasebenzi, iinkqubo, namanyathelo alandelwayo ziaylangabezana nemfuneko yabasebenzi abaneleyo abakwaziyo ukusebenza ngexesha leLTO. |

IKoeberg ikwazile ukusebenzisa amava enawo okusebenza anxulumene nokuguga kwee-SSC neenkqubo zokulawula inkampani ukuze zisebenze kwilTO phambi kweengcali zamazwe ngamazwe kwinkalo zazo. Iziphumo zohlolo IweSALTO zichaziwe kwNNR.

Ukuze kuboniswe ukuba ilTO iza kukhuseleka, kuye kuqwalaselwe ngokukhethekileyo ulawulo olufanelekileyo lweenkqubo zokuguga ezinokuchaphazela iiSSC zesitishi ezibalulekileyo kukhuseleko. Ukujolisa kulawulo lokuguga kwenzelwa ukuqinisekisa ukuba iiSSC ziza kuqhubeka zikwazi ukwenza imisebenzi yazo yokhuseleko ebuden'i balo lonke ixesha elicetyiwego leLTO.

Okubalulekileyo nokuqulathwe kwingcaciso yokhuseleko exhasa isicelo selayisenisi yeLTO nokwanelisa izinto ezifunwa ku-R.266 [2] nesikhokelo semiyalelo ye-NNR kwilTO [12] koku kulandelayo:

- Ingcaciso edibene nesiza (**ekuthethwa ngayo kwiSahluko 8 sale PID**)
- Imingcipheko kukhuseleko, impilo, nokusingqongileyo (**Isahluko 10**)
- Uhlolo lokufaneleka koyilo lwestishi (plant design) kwilTO (**icandelo 11.1**)
- Uhlolo lweyona meko zikuyo iiSSC (**icandelo 11.2**)
- Iziphumo zephulo lokuxhasa leIAEA kwinkalo zokhuseleko lokusebenzisa ixesha elongezelelwego (iSALTO) kujoliswe kwinkqubo zolawulo lokuguga (**icandelo 11.3**)
- Iziphumo zePSR yakutshanje, eqhutywa qho emva kweminyaka eyi-10 zaye zafakwa kwNNR ngoJuni 2022 (**icandelo 11.4**)
- Ifuthe leLTO kwezi nkqubo zilandelayo:
 - Amalungiselelo nokusebenza kokhuselo kwiradiyeyishini (**icandelo 11.5**)
 - Ukhuseleko kwinyukliya (nuclear security) **icandelo 11.6**)
 - Ukucebelo imo yongxamiseko (**icandelo 11.7**)

YEKAWONKE-WONKE

- Ukulawulwa kwenkcitho eneradiyeyishini (**Isahluko 13**)
- Amalungiselelo enkampani eLTO anjengeenkqubo zolawulo, ulawulo lolwazi, abasebenzi nobuchule babasebenzi, imali, imibutho exhasayo yangaphandle (**Isahluko 12**)
- Ukwanelwa kwenkqubo yokhuseleko lwenyukliya (nuclear safety culture) lweKoeberg (**icandelo 12.5**)

Njengenxalenyne yengcaciso yokhuseleko, isicwangciso sokuphumeza iLTO sinikwa iNNR malunga nophuculo oluza kwenziwa ngaphambi nasebuden iLTO ukuze kuqinisekiswe ukuba kusetyenzwa ngendlela ekhuselekileyo ngalo lonke ixesha leLTO. Ngokusekelwe koku kungentla, ingcaciso yokhuseleko ibonisa ukuba izu kuqhube ka isebeenza ngokukhuselekileyo eminye iminyaka eyi-20 kwaye iyangqina ukuba akukho mngcipheko unga fanelekanga kukhuseleko, impilo, okanye kokusingqongileyo.

Ingcaciso yokhuseleko iiqulunqwe yaza yahlolwa yodwa liqela leenjineli ezinamava (zeli nezamazwe ngamazwe) ngaphambi kokuba ithiwe thaca kwiikomiti eziphethe ukhuseleko lweKoeberg ukuze zivumelane nayo. Ukuze kuqinisekiswe ukuba zonke iinkalo zokhuseleko ziye zaqwalaselwa kwingcaciso yokhuseleko, iphindia ihlolwe liqela leengcali ezinamava kakhulu kwinyukliya zeli nezamazwe ngamazwe ngaphambi kokuba ifakwe kwiNNR. Ekugqibeleni, ifakwa kwiNNR ukuze yenze isigqibo ngesicelo seLTO.

6.2 Imiqathango ekhoyo ngoku yelaisenisi nesiseko selayisenisi

ILayisenisi Yesitishi Senyukliya YaseKoeberg esebeenza ngoku (NIL-01 uhlelo 19) [1] ikhutshwe ngokwecandelo 21 loMthetho Womlawuli Wenyukliya Welizwe [35]. I-NIL-01 isebeenza ukuya kumhla we-21 kuJulayi 2024 (kuzo zombini iiyunithi), emva koku kufuneka ihlaziwelwe amanqanaba elaisenisi alandelayo, aquka iLTO. I-NIL-01 ikhutshwe yiNNR ngokuxhomekeke kwimiqathango ekufuneka iKoeberg iyithobe, ngoku nasebuden balo lonke ixesha leLTO. Le miqathango ngokuyintloko isekelwe kwimigaqo ebekwe yi-IAEA kukhuseleko ebeka imigangatho ephakamileyo yokhuseleko lwenyukliya.

IKoeberg iqhuba ikujonga ngokwayo ukuthotyelwa kwemiqathango yeNIL-01, noxa iNNR yona ibeka imiyalelo ezimeleyo yokujonga ukuze ibeke esweni ukuthobela kweKoeberg imiqathango yeNIL-01. Le yeyona ndlela isebezayo yokuqinisekisa ukuba kusetyenzwa ngendlela ekhuselekileyo ngokuthobela ngokungqongqo imigangatho ephezulu yokhuseleko nemiqathango yelaisenisi. Ikopi yeNIL-01 iyafumaneka kuluntu kwaye inokufumaneka kwiwebhusayithi yeNNR.

Imiqathango ekhethiweyo yeNIL-01 ekufuneka ithotyelwe nesebenzayo ngoku nakwiLTO idweliswe ngezantsi. Ezi ziimbala sane ezixhaswa ngamaxwebhu ahlukaneyo elaisenisi, amaxwebhu emiyalelo, nemigangatho yelizwe neyamazwe ngamazwe echaza ngokweenkcukacha izinto ezifunekayo nezinto ezipongwayo, xa kuyimfuneko. Imiqathango

YEKAWONKE-WONKE

yelayisenisi ishwankathelwe ukuze ibe lula kwaye kube lula nokuyiqonda kwaye ayiloludwe olupheleleyo lwayo yonke imiqathango yelayisenisi.

- Urukhuselwa kwabantu kwiradiyeyishini – iKoeberg imele iqiniseke ukuba iidowusi zeradiyeyishini engena ebantwini (abasebenzi nowonke-wonke) aziggithi kwisisikelo esibekwe yiNNR.
- Urukhuselwa kokusingqongileyo nokulawulwa kwamanzi amdaka alahlwayo – iKoeberg imele ibeke esweni kwaye ilawule ukuchithwa kwamanzi amdaka aneradiyeyishini (amanzi nerhasi) kwimida echazwe yiNNR.
- Inkitho eneradiyeyishini ekhutshwayo – iKoeberg imele iqiniseke ukuba inkitho eneradiyeyishini ekhutshwayo iyancitshisa, igcinwa ngendlela ekhuselekileyo, ize ilahlwe okanye isetyenziswe ngokutsha.
- Ukucebela nokulungela imeko yongxamiseko yengozi yenyukliya – iKoeberg imele iqiniseke ukuba isicwangciso semeko yongxamiseko yengozi yenyukliya siyaqulunqwa, siqheliselwe, size sivavanywe.
- Ukubekwa esweni ngabezamayeza nerejista yempilo – iKoeberg imele iqiniseke ukuba bonke abasebenzi, kuquka iikhontraktha ezibandakanyeke kwizinto ezenziwayo ezichaphazela ukhuseleko lwenyukliya, zisempilweni ngokwaneleyo ukuze zenze umsebenzi.
- Uhlolo lokhuseleko – iKoeberg imele ijonge, ihlole ize iphinde iqwalasele ukhuseleko ebuden bawo onke amanqanaba omjikelo wobomi bayo. I-PSR imele yenziwe qho kwiminyaka eyi-10 kwaye ifakwe kwiNNR.
- Utshintsho kwisitishi – iKoeberg imele ifumane isigunyaziso kwiNNR salo lonke utshintsho oluchaphazela ukhuseleko lwenyukliya kwesi sitishi.
- Ukulungisa nokuhlol – iKoeberg imele iqiniseke ukuba iiSSC ziyalungiswa zize zihlolwe ukuze kuqinisekiswe ukuba ziyakwazi ukuwufenza umsebenzi wazo wokhuseleko. Ukulungisa, ukuhlola, nokuvavanya kumele kwensiwe ngabantu abafunde baqeleshwa ngokufanelekileyo.
- Ulawulo lokuguga neLTO – iKoeberg imele iqiniseke kuba kuqulunqwa, kuphunyezwe, kuze kugcinwe inkqubo esebezayo yokulawula ukuguga ukuze kuqinisekiswe ukuba imisebenzi yokhuseleko eyenziwa ziiSSC isoloko ikho ngalo lonke ixesha lokusebenza kwayo.
- Ukuphelisa ugynyaziso lwestishi – iKoeberg imele ibonise iNNR ukuba kuza kubakho abasebenzi nemali eyaneleyo ngalo lonke ixesha lokuphelisa ugynyaziso lwestishi kwayo.

YEKAWONKE-WONKE

- Ukhuseleko loqobo— iKoeberg imele iqiniseke ukuba isiza, isitishi, nabantu abangaphakathi kwesiza eKoeberg bakhuselekile.
- Abantu abagunyazisiwego nabafanelekileyo – iKoeberg imele iqiniseke ukuba ngabantu abafanelekileyo nabanamava kuphela abenza imisebenzi enokuchaphazela ukusebenza ngendlela ekhuselekileyo.
- Ulawulo lomgangatho nokhuseleko – iKoeberg imele isebezise inkubo edityanisiwego yokulawula umgangatho nokhuseleko kunye nenkubo yenqubo yokhuseleko Iwennyukliya.

IKoeberg iye yasungula iinkubo zenkampani, iinkubo namanyathelo alandelwayo athelekiswa nemigangatho yelizwe neyamazwe ngamazwe ukuze ihambisane nale miqathango yelaisenisi ingentla. Ukuthotyelwa kwezi nkubo, namanyathelo alandelwayo kubekwa esweni ngophicotho Iwangaphakathi IweSebe Eliqinisekisa Umgangatho LaseKoeberg (kulandelwa isicwangciso sokuphicotha esenziwa unyaka nonyaka), ngeengxelo ezenziwa minyaka le zolawulo ezivela kwiSebe Eliqinisekisa Ngokhuseleko LaseKoeberg, uhlolo Iwangaphandle olunjengohlolo loontanga IweWANO (olwenziwe ngo-2021), iBhodi Ehlola Ukhuseleko Lwenyukliya (NSRB), nokuhlolwa qho yiNNR. Iqela lamanyathelo alandelwayo neenkubo libhalwe kwimanyuwali yesiseko sokunikwa ilayisenisi kweKoeberg.

Inkubo yokufaka iingxelo ikho ngokuhambisana noko kufunwa yilaisenisi. IKoeberg kufuneka ithumele iingxelo kwiNNR ngemiba eliqela suku ngalunye, veki nganye, nyanga nganye, okanye nyaka ngamnye, kuxhomekeka kuhlobo Iwento nefuthe enganalo ekusebenzeni ngendlela ekhuselekileyo. Ukufakwa kweengxelo qho kubangela ukuba kungafahlwa nto kwaye abantu baphenduliswe, kwaye iqhelekile loo nto kwizitishi zenyukliya.

Ulawulo IweNNR olunjongo yalo ikukuqinisekisa ukuba imiqathango yelaisenisi ye-Koeberg NIL-01 iyafezekiswa kwaye iza kuqhubeka ifezekiswa ebudenibexesha leLTO kuza kuthethwa ngayo kwicandelo elilandelayo.

6.3 Ukongamela kweNNR – ukuthobela imiyalelo nokuyinyanzelisa

IKoeberg inoxanduva lokhuseleko Iwennyukliya, noxa iNNR inoxanduva lokuchaza izinto ezifunekayo ukuze kubekho ukhuseleko Iwennyukliya kwaye isongamela umsebenzi. Njengoko kuchaziwe kwiwebhusayithi yeNNR, iNNR inikwe umsebenzi wokubeka esweni nowokunyanzelisa imigangatho yokhuseleko efunwa yimiialelo ukuze kusetyenzwe ngendlela ekhuselekileyo, kuthintelwe iingozi zenyukliya, okanye kuncitshiswe imiphumo yengozi zenyukliya, ize loo nto iphumele ekubeni abasebenzi, uwonke-wonke, iipropati, nokusingqongileyo zikhuseleke kwimiphumo engayingozi yeradiyeyishini efaka i-ion okanye yezinto ezineradiyeyishini.

IKoeberg kulindeleke ukuba iphumeze inkubo yokuhlolwa ukuze iqiniseke ukuba iyathotyelwa imiqathango ekwiNIL-01. I-NNR isebezisa inkubo ezimeleyo yokongamela enamanyathelo

YEKAWONKE-WONKE

angqongqo okuthobela nokunyanzelisa. I-NNR yenza izinto eziqinisekisa ukuthobela ukuze ibone ukuba iKoeberg iyithobela kangakanani imiqathango yeNIL-01. Izinto eziqinisekisa ukuthobela zibandakanya intlanganisela yophicotho, uhlolo olwensiwa ngamaxesha athile, uhlolo olwensiwa nanini na, ukuqwalaselwa kweengxelo ezenziwa ngamaxesha athile, nokuqwalaselwa kweengxelo zeziganeko.

Xa kufumaniseka ukuba kukho ukungathotyelwa kwemiqathango, iNNR inokuqalisa izenso zokunyanzelisa ukuthobela. Izenzo zokunyanzelisa ukuthobela zenzelwe ukusabela xa ingathotyelwa imiqathango nezinto ezifunekayo ezichaziwego. Izenzo zokunyanzelisa ukuthobela ziye zilingane nobungakanani bokwaphulwa komqathango kwaye zingazizilumkiso ezibaliwego, izohlwayo, ukunqandwa komsebenzi, ukunqunyanyiswa kogunyaziso, okanye – ekuggibeleni – ukurhoxiswa kogunyaziso. Kuzo zonke iimeko, uEskom, umnini-gunya, umele alungise oko kungathobeli ngokwenza uphando olucokisayo ngexesha ekuvunyelwene ngalo kwaye athathe onke amanyathelo ayimfuneko ukuze inqandwe ingaphinde yenzeke loo nto.

Ukongamela kakuhle kweNNR kuye kwafaka isandla ekuqhubekeni kweKoeberg iseberna ngendlela ekhuselekileyo kuyo yonke le minyaka idlulileyo. Inkqubo yemiyalelo nokongamela kweNNR, kunye neminye imiyalelo esacingwayo malunga nezinto ezifunekayo kwiLTO, ziza kuqhubeka ziseberna ebudeni beLTO.

YEKAWONKE-WONKE

7. INKCAZELO YOMFAKI-SICELO

| | |
|---|--|
| Igama elipheleleyo lomfaki-sicelo | Eskom Holdings SOC Limited |
| Idilesi yendawo | Megawatt Park Maxwell Drive Sunninghill 2157 |
| Inombolo yobhaliso yenkampani | 2002/015527/30 |
| Umhla wokubhaliswa | 2002 |
| Iadresi ebhalisiweyo | PO Box 1091 Johannesburg 2000 |
| Idilesi yendawo yesitishi senyukliya | R27 off West Coast Road, Melkbosstrand, Western Cape, 7441 Esi siza simalunga neekhilomitha eziyi-27 kumntla weKapa eNtshona Koloni. EKoeberg ungena ngo-R27 kungenjalo nge-Otto du Plessis Drive. IKoeberg ikwiFama YasseDuynefontyn 1552. |
| Inkcukacha zazo naziphi iinkampani ezingabanini okanye ezingamahlakani ale | UEskom Holdings SOC Limited ngokarhulumente ngokupheleleyo. |
| linkcukacha zokubandakanyeka kwelinje ilizwe okanye zokulawulwa kwezitishi zenyukliya ngamaqumrhu /oorhulumente bangaphandle (bamanye amazwe) | Akukho mfuneko yazo (N/A) |

8. INGCACISO YESIZA

IKoeberg ikwiPhondo LaseNtshona Koloni kwiSithili SaseBlaauwberg soMasipala Ombaxa WesiXeko SaseKapa, malunga neekhilomitha eziyi-27 kumntla weKapa. Ikwisiza esikwifama yaseKapa iDuynefontyn 1552 (kudityaniswe ifama yaseKapa iDuynefontyn 34 neFama 1375) kunye nefama emelene nayo iKleine Springfontyn 33. Esi siza sonke sesikaEskom, kwaye sijikelezwe liziko lokulondoloza indalo elinomnini walo. YiWitzands Aquifer Nature Reserve kumntla mpuma, kwaye yindawo ehlala abantu iDuynefontein emzantsi ize ibe luLwandle LweAtlantiki entshona.

U-R27, owaziwa ngokuba yiWest Coast Road, yindlela yelizwe eya kwicala lomntla nomzantsi kunye nomntla ntshona kumda osempuma wesi siza. Indlela eyintloko yokungena isuka ku-R27 iye eKoeberg kwaye ikhona nenye indlela yokungena ngeDuynefontein emzantsi.

Isiza saseDuynefontyn, ekuso iKoeberg ihlahlelwie ngokufanelekileyo njengetyokuvelisa umbane ngenyukliya nemisebenzi edibene naleyo.

YEKAWONKE-WONKE

lintambo zombane ze-400 kV zidibanisa le ndawo negridi yelizwe kunye nomthombo oyintloko wombane oseMpumalanga, kwaye iKoeberg ifaka umbane kwigridi ukuze usetyenziswe ekuhlaleni ize iwuthumele kwinkqubo yegridi, kuxhomekeka ekubeni ingakanani imfuneko yawo.

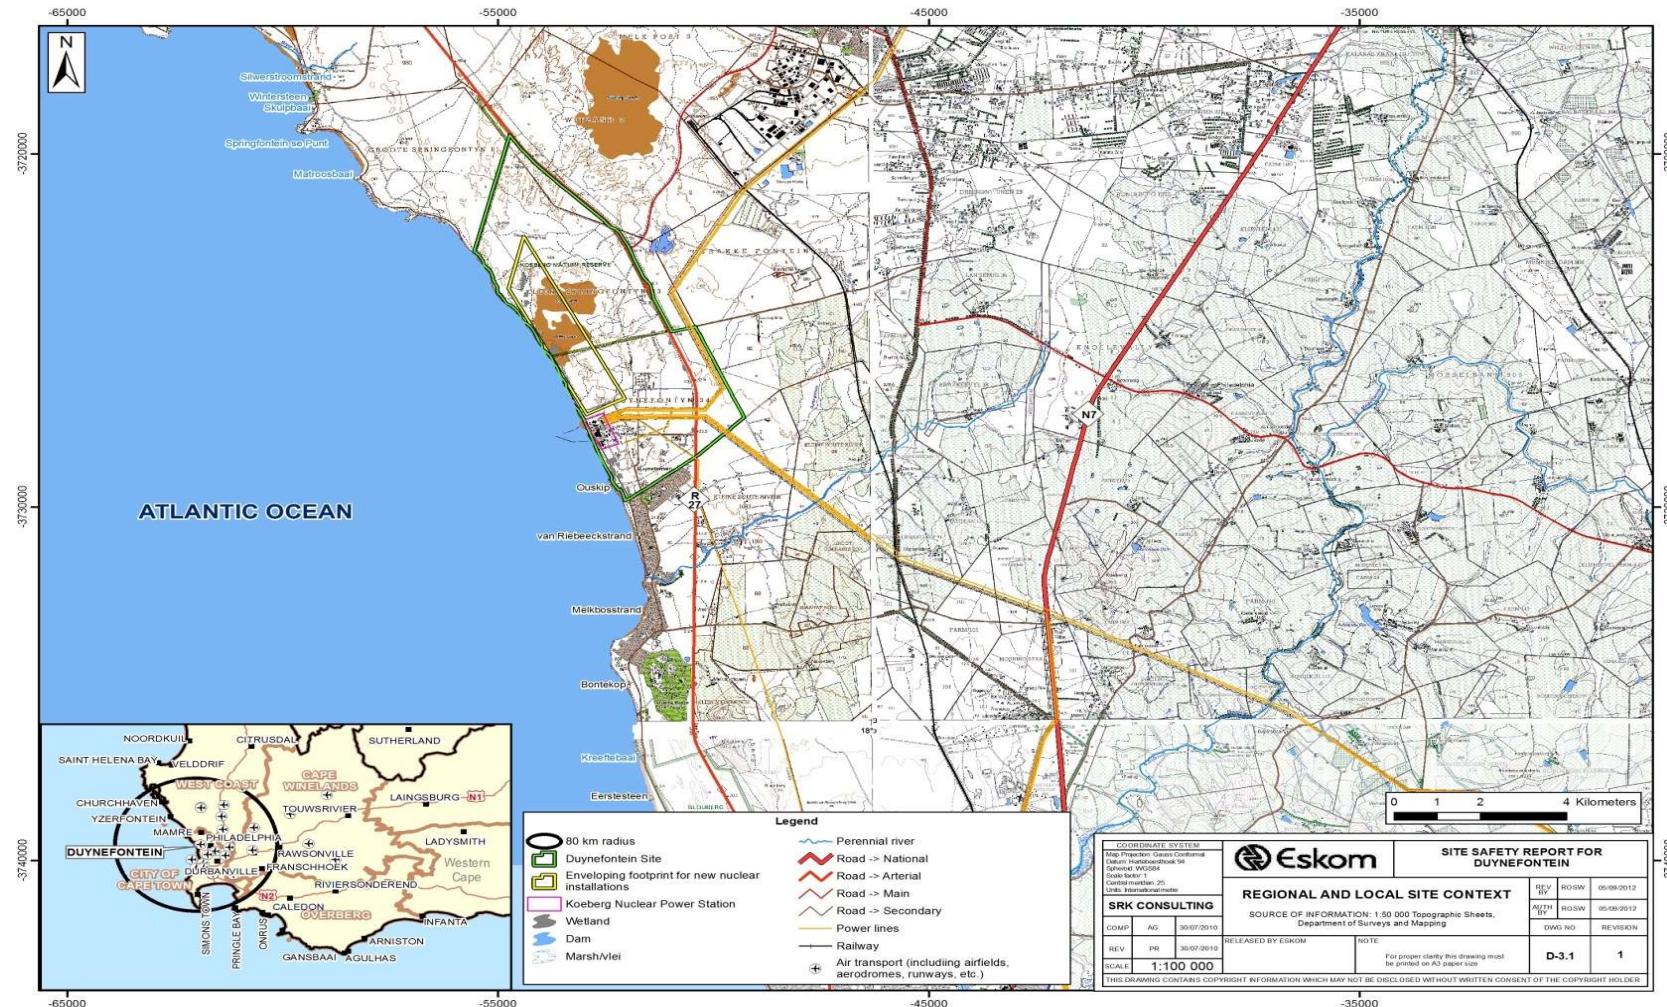

IKoeberg ifumana amanzi kwisiXeko SaseKapa kunye nendawo yaseBloubergstrand, eMelkbosstrand, eVan Riebeeckstrand neDuynefontein ngemibhobho yamanzi evela kwiDama LaseVoelvlei eliphakathi kweHermon neTulbagh, nakuVimba Wamanzi WaseMelkbos oziimitha eziyi-40 000 m³.

Akukho milambo kwisiza ngokwaso kodwa kukho imigxobhozo ebalulekileyo kwizityalo nezilwanyana xa usiya kumzantsi weKoeberg nakwinxalenye esemantla esiza.

Esona sikhululo seenqwelo-moya sikhulu sikufutshane siSikhululo Seenqwelo-moya Samazwe Ngamazwe SaseKapa, esikwiikhilomitha eziyi-40 kumzantsi-mpuma. Isiporo sikaloliwe oya eNamaqualand esidlula malunga neekhilomitha eziyi-24 kwimpuma yesi siza sesona siporo sikaloliwe sikufutshane kwesi siza.

IChweba LaseKapa (kwiikhilomitha eziyi-25 emzantsi) lelona chweba likhulu lezorhwebo kule ngingqi, kwaye iChweba LaseYzerfontein, ichweba lezikephe ezincinane, likwiikhilomitha eziyi-25 xa usiya kumntla ntshona. Esi siza xa usijonga ngokwengingqi siboniswe kuMfanekiso 4

YEKAWONKE-WONKE

Umfanekiso 4: Isiza xa usijonga ngokwengingqi nasekuhlaleni

YEKAWONKE-WONKE

Xa ukhutshelwa kwisistim yolawulo Iwamaxwebhu, olu xwebhu alulawulwa kwaye uxanduva luxhomekeke kumsebenzisi ukuqinisekisa ukuba luhambelana nenguulelo egunyazisiweyo kwisistim. Akukho nxalenyeye yolu xwebhu inokuphindza iveliswe nangayiphi na indlela okanye ngomnye umuntu ngaphandle kwemvume ebhaliweyo yakwaEskom Holdings SOC Ltd, © copyright Eskom Holdings SOC Ltd, Reg No 2002/015527/30

8.1 Ukufaneleka kwesiza

Esi siza saseDuynefontyn siye sahlola kakhulu ekuqhubekeni kweminyaka ngokuphathelele zonke iinkalo zesiza ezingachaphazela ukhuseleko lwezakhiwo zaseKoeberg zize zidale ukuba imathiriyali eneradiyeyishini iye ebantwini nakokusinqongileyo. Olu phononongo beluquka, phakathi kwezinye izinto:

- olokuma komhlaba, ukunyikima komhlaba, uhlobo lomhlaba, amanzi, nemozulu;
- ukuqwalaselwa kotshintsho kwimozulu;
- ukwanda kwabemi nokusasazeka kwabo;
- ukusetyenziswa komhlaba nolwandle olumelene nesiza;
- izakhiwo ezikufutshane zezothutho, zemizi-mveliso nezomkhosi; kunye
- nefuthe elingakho leradiyeyishini kubantu nakokusinqongileyo.

Uphononongo lokuhlolola isiza olwenziwe ngaphambili lubonise ukuba, ngokusekelwe kwinkcazelu efumanekayo ukuza kuthi ga namhanje azikho izinto ezifunyenweyo eziyenza ingafanelekeli ukuqhubeka isetyenziselwa inyukliya. Olu phononongo luyahlaziwa sithethanje luthathela ingqalelo izifundo ezifunyenwe kwiFukushima ukuze kuqinisekwe ukuba indlela esisqonda ngayo esi siza yeyakutshanje kwaye yechanile kusetyenziswa inkcazelu, imimiselo yolawulo kunye neendlela zokuhlalutya.

Uphononongo lokuhlolola isiza lwenziwa kusetyenziswa imimiselo yamazwe ngamazwe, yelizwe kunye nemiqathango yemyialelo yokhuseleko, equka Imimiselo Yokunika Isiza llayisenisi) [17], Isikhokelo Sexeshana Seziza Zezakhiwo Zenyukliya [18], Ukuhlolwa Kweziza Zezitishi Zenyukliya KwelAEA [19].

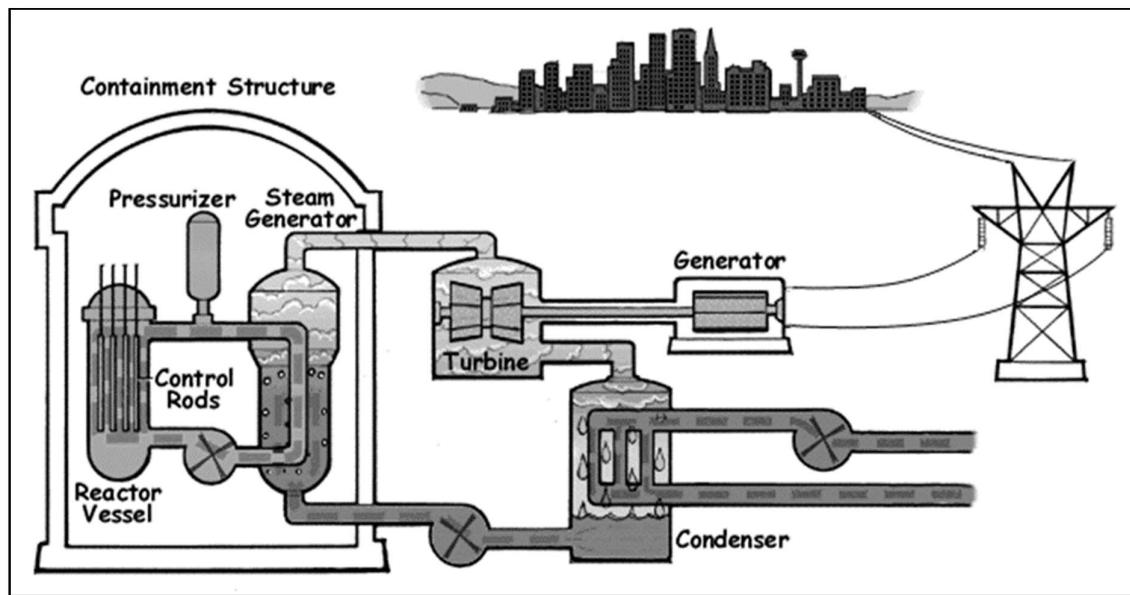

9. INGCACISO YEMISEBENZI EYENZIWA NGOKU EKOEBOERG

Eli candelo lisinika amaggabantshintshi emisebenzi eyenziwa eKoeberg.

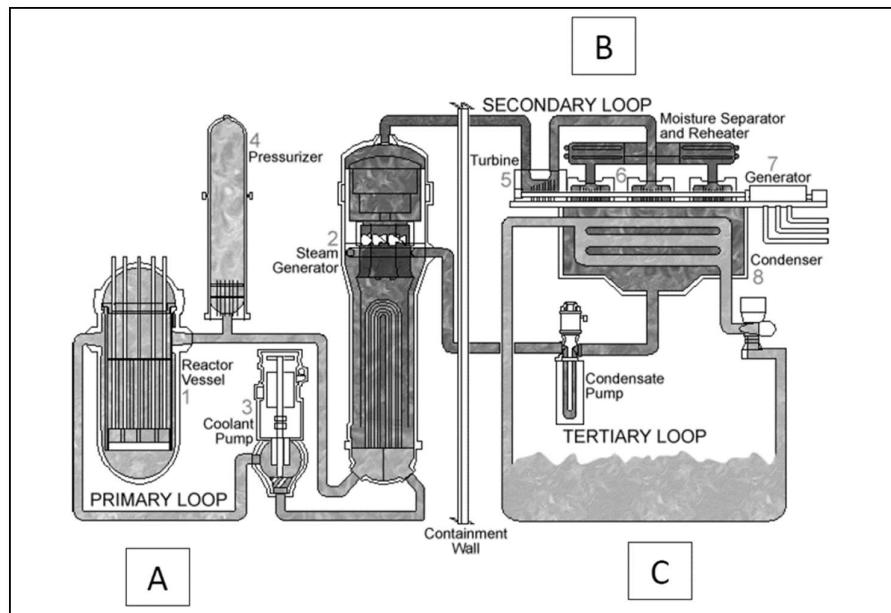

9.1 Isitishi Senyukliya Sokuphehla Umbane SaseKoeberg

Uyilo IweKoeberg alufani lodwa. Luyafana nolwezinye iiyunithi zeeriiektha zenyukliya ezisehlabathini jikelele (ngokukodwa eFransi) kwaye uyilo lwayo luyafana nolwezinye iiyunithi zeeriiektha ezisebenza ehlabathini jikelele sithethanje. Ngenxa yoko, le teknoloji iyaziwa kwaye iyaqondwa, nto leyo enegalelo ekuthembekeni nakukhuseleko lwayo. IKoeberg yakhiwa ngo-1976 kwaye ineyunithi zeriiektha ezimbini ezivelisa umbane ongange-920 MWe, enika uxinzelelo lwananzi eriyektha [pressurised water reactor (PWR)]. Iteknoloji yePWR esetyenziswa eKoeberg yayisekelwe kuyilo lwasWestinghouse yaza yakhiwa nguFramatome. Umfanekiso 5 ubonisa ukaveliswa kombane kusetyenziswa uyilo IwePWR.

YEKAWONKE-WONKE

Umfanekiso 5: Umzobo olula weriyektha yamanzi axinzelelweyo yesitishi senyukliya [21]

Umfanekiso 6: Uqwaliaselo lwenkqubo yoyilo lwestishi sePWR [22]

Iyunithi evelisa umbane yePWR yakhiwe yisistimu enamacandelo amathathu (eliyintloko, elesibini, neliphezulu), apho iisistimu zahluliwego enye kwenye, njengoko kuboniswe. Umfanekiso 6, kwaye mancinane amanzi apholiswayo adibanyo eesistimu ezimeleneyo. Olu

YEKAWONKE-WONKE

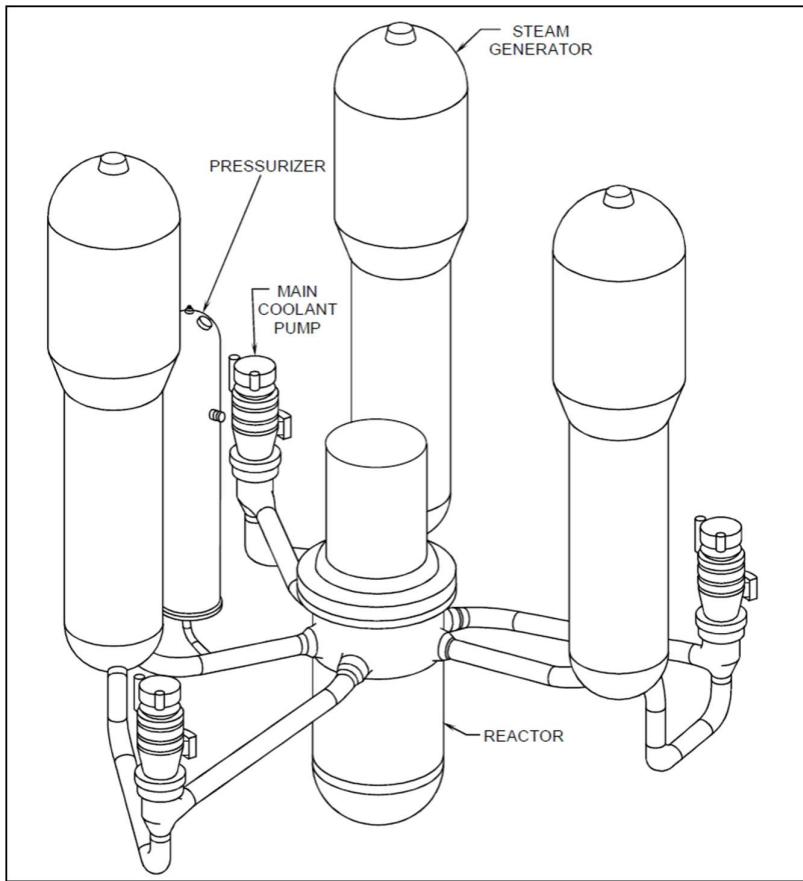

Iwahlulo lweesistimu luvalela i-radioactivity ekwisistimu eyintloko nto leyo engumqobo othintela ukuphuma kwamanzi amdaka aneradiyeyishini.

Iyunithi yeriye ktha nganye inesiqithi senyukliya (nuclear island), isiqithi seturbine (turbine island), umbhobho ongenisa amanzi nowakhuphayo. Iinxalenye eziphambili ze-nuclear island zezi:

- Isakhiwo seriyektha, esikwabizwa ngokuthi yi-containment. Sineriyektha nawo onke amacandelo amanzi apholisayo axinzelelwego, iikhomponenti neenkubo ezifunekayo ukuze iriyektha isebe nge ndlela ekhuselekileyo. Sisakhiwo esingcityiweyo, esibamba uxinzelelo esigcina kokubini iradiyeyishini ekhutshwa sisiku seriyektha xa kungenzeka ingozi nesikhuela inkqubo kwiziganeko ezenzeka ngaphandle ezifana nemozulu embi nkqu nemijukujelwa yeebhombu. Sakhwiwe ngekhonkrithi edeki kakhulu, neqiniswe ngentsimbi. Xa kusetyenzwa ngokuqhelekileyo isakhiwo seriyektha sihlala sikuxinzelelo oluphantsi. Inkqubo eyintloko ineenjini ezintathu zomphunga, iimpompo ezintathu zamanzi apholisa iriyektha, i-pressure vessel, ne-reactor pressure vessel, ebamba amafutha enyukliya. Indlela emi ngayo isistimu eyintloko iboniswe kuUmfanekiso 7.
- Isakhiwo samafutha sihlala izakhiwo zokugcina amafutha amatsha xa engekafakwa kwiriyektha namafutha asetyenzisiweyo aphuma kwiriyektha. Isakhiwo samafutha sikwaqulethe izixhobo zedama lokupholisa amafutha nesistimu yokuhluza kune nesistimu yongxamiseko yokufaka amanzi kwinjini yomphunga.
- Isakhiwo sokuncedisa inyukliya sinamagumbi anezixhobo zokuncedisa ukwenza umbane, aqulathe zonke iindlela zokulawula iyunithi (igumbi lokulawula nezakhiwo zokusebenza, umbane, nenqubo yezixhobo neyokulawula).
- Isakhiwo senyukliya esincedisayo sihlala iinkqubo ezincedisayo ezifunekayo xa iriyektha isebe nge ndlela ngokuqhelekileyo kwaye sixhasa iinkqubo zokhuseleko. Esi sakhiwo sihlala izixhobo zokusebenza nenqubo yokulawula iikhemikhali nobungakanani bezinto, inkqubo yokusebenza inkcitho eyirhasi, inkqubo yokusebenza amanzi apholisayo alahlwayo, nenqubo yokusebenzisa ngokutsha i-boron.
- Ngokobume bezakhiwo ezibini eza lukaneyo, isakhiwo ngasinye sihlala injini yedizili (umbane wemeko yongxamiseko).
- Isakhiwo sokugcina izinto sexeshana [temporary interim storage facility (TISF)] esakhiwayo ngoku sixhomekeke ekugunyazisweni yiNNR, ekuza kuhlala kuso imiqomo yokugcina amafutha enyukliya asetyenzisiweyo, neenjini ezindala zomphunga de zigunyaziswe izicwangciso zeendawo zokugqibela ezifanele zilahlwe kuzo.

Iyonke i-nuclear island ixhonywe kwinkqubo enciphisa intshukumo xa kunyikima umhlaba. Le nkqubo ikhusela isakhiwo sesiqithi senyukliya kwiintshukumo kuvumela iyunithi yeriye ktha ukuba icinywe ngendlela ekhuselekileyo.

YEKAWONKE-WONKE

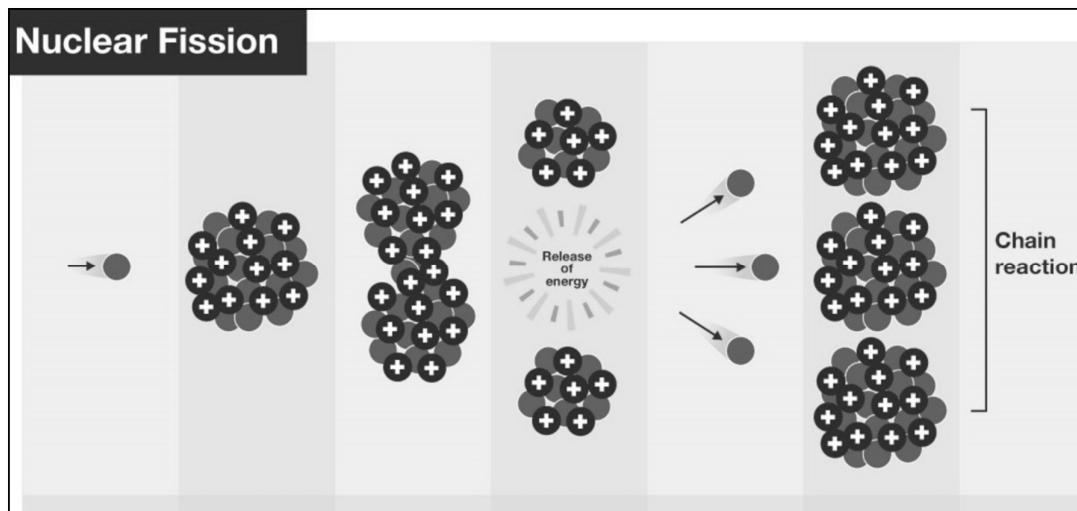

Umfanekiso 7: Umzobo wokuma kwee-SSC kwisitishi senyukliya esinamacandelo amathathu [23]

9.2 Ukuveliswa kombane kwizitishi zokuphehla umbane zenyukliya

9.2.1 Ukuqhekeka kwenyukliya

IKoeberg ixhomekeka kwi-uranium etyetyiswe kancinci njengomthombo wamafutha avelisa ubushushu. Ubushushu obuvveliswayo ebuden'i bokuhwita kwenyukliya kudala inkubo ebizwa ngokuthi 'kukuqhekeka' (fission). Ukuqhekeka kuquka ukwahlulwa kweeathomu zenyukliya ngamasuntswana, abizwa ngokuthi zii-neutrons. Xa iathomu yenyukliya enkulu zibethwa yineutron, iyahluka kwaye ziimveliso zoqhekeko ezimbini okanye ngakumbi ezincinane ize ivelise amandla nee-neutron xa isenjenjalo. Emva koku ii-neutron ezikhululwego ziyaqhubeka ziqhekeka ibe ngumtyhutyhumero woqhekezo lwenyukliya. Ukwahlulwa kweeathomu nokukhululwa kwamandla kubizwa ngokuba kukuqhekeza kwenyukliya (Umfanekiso 8).

YEKAWONKE-WONKE

Umfanekiso 8: Intsabelo yokuqhekezwa kwenyukliya [24]

Le nkqubo yokuqhekezwa ilawulwa ngobunono kusetyenziswa i-boric acid enyibilikiswe kumanzi enkqubo eyintloko (isipholisi seriyektha) nakwiicontrol rods zeriyektha ukuze kuqinisekiswe ukuba imida yoyilo akuggithwa kuyo.

Amanzi akwistimu eyintloko wona aye ajikeleziswe kwisistimu eyintloko ukuze kuphume amandla obushushu avela kwiriyektha ukuze kugcinwe ubushushu bayo bukwiqondo elibekwe kuyilo. Amanzi atshisayo aphuma kwiriyektha ngomlenze otshisayo weriyektha angene kwinjini yomphunga. Kwinjini yomphunga amanzi esekethi eyintloko ayapholiswa njengoko edlulisela ubushushu bawo kwisekethi yesibini. UKusuka kwinjini yomphunga, amanzi esekethi eyintloko ayampontshwa abuyiselwe kumlenze obandayo weriyektha ngeempombo zamanzi okupholisa iriyektha aphi eye aphinde afudunyeze ngamandla akhutshwa yinkqubo yokuqhekezwa kwenyukliya. Iyunithi nganye yaseKoeberg inamacandelo esekethi ayintloko amathathu, oko kukuthi, iinjini zomphunga ezintathu kunye neempombo eziyintloko ezintathu. Elinye lamacandelo esekethi eyintloko linesixinzeleli esigcina uxinzelelo lwestimtu eyintloko luphezulu ngokwaneleyo ukuba luthintele amanzi akwisekethi eyintloko angabili, yiloo nto ibizwa ngokuthi yirihektha yamanzi axinzelelwego.

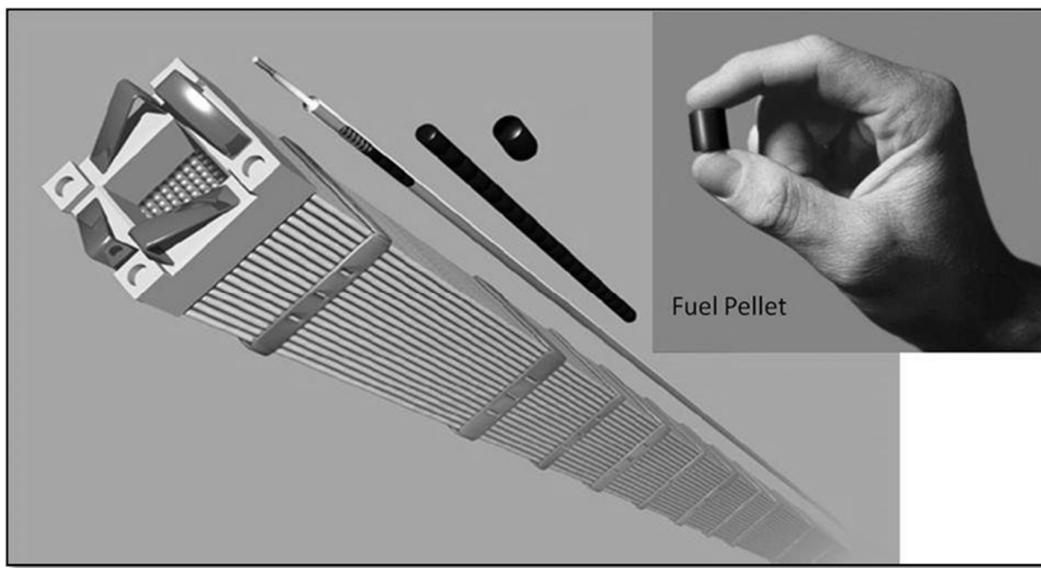

Kule nkqubo, ubushushu budlulisela phakathi kwsistimu eyintloko neyesibini. Kwicala lesibini lenjini yomphunga, amanzi ayavunyelwa ukuba abile ukuze atshintshwe abe ngumphunga. Lo mphunga ke uye usetyenziswe ukuqhube i-turbine ethi yona iiqhube injini evelisa umbane. Emva kokudlula kwiturbine, umphunga uyatshintsha ube ngamanzi ukuze uphinde ubuyiselwe kwiinjini zomphunga, ube uyayiggiba ke isekethi yesibini. Amanzi avela kuLwandle LweAtlantiki abandayo ampontshwa athubeleze kwikhondensa (condenser) ekwisekethi yesithathu, okanye ekwinqanaba elingentla, ibe ubushushu obukhutshuwego bubuyiselwa kuLwandlekazi LweAtlantiki. Ngoko iKoeberg isebenza ngeesekethi zamanzi

YEKAWONKE-WONKE

ezintathu ezahlukeneyo: eyintloko, eyesibini, neyenqanaba elingentla. Injongo yokwahlula ezi sistimu zintathu kukuqinisekisa ukuba amanzi avela kwisistimu eyintloko, ahlulwa ngokupheleleyo kwezinye iisistimu ukuze kuthintelwe ukudibana kwesistimu eyintloko yenqanaba elingentla, kuba isistimu yenqanaba elingentla iyadibana nokusingqongileyo.

9.2.2 Imathiriyali esetyenzisiwego eneradiyeyishini

Iriyektha zenyukliya zaseKoeberg zivelisa zize zilawule ukukhululwa kwamandla ngenkqubo yokuqhekeka kwenyukliya (okokukuthi ukwahlulwa kweeathomu) zisebenzisa ngakumbi ii-isotope ze-uranium-235 (U-235) ezikuhlobo lwe-pellet ze-uranium oxide (UO_2), njengamafutha. li-pellets ze- UO_2 zipakishwa kwiityhubhu ukuze ziyle ii-fuel rod, zize zona zifakwe kwisiqu seriyektha njengamalungu afaka amafutha, aboniswe kuMfanekiso 9. Kwisiqu seriyektha ii-isotope ze-U-235 ziyaqhekezwu okanye zahlulwe, kuveliswe ubushushu obuninzi kwinkqubo eqhubekayo ebizwa ngomtyhutyhumezo wokuqhekezwu kwenyukliya (chain reaction).

Umfanekiso 9: Umfanekiso we-fuel assembly yePWR eqhelekileyo, ne-fuel rod, i-control rod ne-pellet yamafutha eboniswe iyodwa

Kusetyenziswa amanzi njengesithomalalisi ukuze kuthotywe isantya see-neutron ezikhululwa yinkqubo yokuqhekeka kwenyukliya ukuze ziqhekeze inyukliya nangakumbi, noxa ii-control rod ne-boron enyibilikileyo kwisipholisi esiyintloko zisetyenziswa ukufunxa ii-neutrons ukuze kulawulwe izinga lensesabelo kwisiqu seriyektha.

li-fuel rod zine-uranium, etyetyisiwego kodwa ayadlula ku-4.95 % U-235, ekuhlobo lweepellets ezimile okwesilinda ze-uranium dioxide, ezikwiityhubhu zamafutha. Ezi tyhubhu zamafutha zenziwa nge-alloy ye-zirconium ngenxa yokuba ineempawu ezifunekayo, iyakwazi ukunyamezela ukukrweleka, kwaye ayizifunxi kakhulu iineutron. li-fuel rod

YEKAWONKE-WONKE

ziyaxinzelelwa ngaphakathi nge-helium ebuden'i bokuyilwa kwazo ukuze kuthintelwe ukuba sicaba kwetyhubhu. Ezi tyhubhu ziba ngumqobo wokuqala wokuvalela iradiyeyishini ngaphakathi kwe-fuel rod. li-fuel rod zinganezifunxi ezitshayo ezizii-pellet zamafutha eziimile njenge-boride okanye ngee-pellet zamafutha e-uranium oxide axutywe ne-gadolinium oxide, okanye intlanganisela yazo, ukuze kulawulwe intsabelo kwisiq' seriyektha.

Imveliso zokuqhekezw'a kwenyukliya neziyilelo ezinzima ziza kwanda njengoko kusetyenzwa, ukusa kwinqanaba lokuba kungakwazeki ukuqhubeka kusetyenziswa loo mafutha. Xa ekhutshiwe kwiriyektha, amafutha asetyenzisiw' aza kuqhubeka ekhupha iradiyeyishini nobushushu. Imijikelo yokucima iiyunithi ukuze kutshintshwe amafutha idla ngokuba phakathi kweenyang'a eziyi-12 neziyi-24. Xa icinyiwe iyunithi ukuze kutshintshwe amafutha, isinye kwisithathu samalungu agcina amafutha kuphela esitshintshwayo, ngamanye amazwi, isibini kwisithathu samafutha asetyenzisiw' siphinda sibuyiselwe kunye nesinye kwisithathu samafutha amatsha.

Ukusuka kwisiq' seriyektha, amalungu amafutha asetyenzisiw' abekwa kwidama lamafutha asetyenzisiw' ukuze ubushushu neradiyeyishini zehlele kumaqondo amkelekileyo ngaphambi kokuba asiwe kwimigqomo yamafutha asetyenzisiw'. Kwidama lamafutha asetyenzisiw', amanzi ayakhusela kwiradiyeyishini kwaye afunxa ubushushu obukhutshwa ngala mafutha. Amalungu afaka amafutha asetyenzisiw' agcinwa kumadama amafutha asetyenzisiw' iminyaka eqikelelwa kweyi-10 ukuze aphole kwaye kuxhomekeka ekufumaneken'i kwsikhewa kwidama lamafutha asetyenzisiw'.

10. IMINGCIPHEKO KUKHUSELEKO, IMILO, NOKUSINGQONGILEYO EDIBENE NOKUSETYENZISWA KWESITISHI IXESHA ELONGEZELELWEYO

I Koeberg oko yaqhubeka isezen'a ngokukhuselekileyo ukususela ekugunyazisweni kokusebenza kwayo ngo 1984. Oku kubu yimpumelelo ngenxa yoyilo l'wesi sitishi olungqongqo, ukusetyenziswa kweenkqubo zokhuseleko ezingqingqwa (umzekelo, ukulondoza izixhobo zokukwenza umbane), ukuthotyelwa kweenkqubo (umzekelo, ukuqinisekiswa komgangatho), nokwabelana ngolwazi nemibutho yamazwe ngamazwe anxulumene nezombane owenziwa ngenukliya, enjengoWANO nelAEA. I-NNR ikwanendima ebalulekileyo ekuqinisekisen'i ukuba i Koeberg iyaqhubeka isezen'a ngokukhuselekileyo, ngokongamela ngqongqo ngemiyalelo eyibekayo.

10.1 Imingcipheko yokhuseleko lwenyukliya

I mingcipheko yeengozi zenyukliya ezirokubangela ukuba kuphume iradiyeyishini ingene kokusingqongileyo, nomngcipheko kuluntu ngenxa yokusebenza ngendlela eqhelekileyo uphantsi kakhulu. Eli cadelo lithetha ngemida yokhuseleko lwenyukliya ebekwe yiNNR, ingcamango yokuba amanqanaba ngamanqanaba obunzulu okhuselo (defence in depth [DiD])

YEKAWONKE-WONKE

esetyenziswa eKoeberg ukugcina imingcipheko ikwinqanaba elamkelekileyo, nolawulo lwengozi.

10.1.1 Imida yomngcipheko kakhuseleko lwenyukliya

I-NNR ichaza imiqathango engundoqo yokhuseleko (imida yomngcipheko) ekumele iKoeberg iyithobebe [5]. Imiqathango engundoqo yokhuseleko yimida yomngcipheko wonyaka kuluntu nakubasebenzi ngenxa yokuchanabeka kwizinto ezineradiyeyishini ezibangelwa ziimeko eziqhelekileyo okanye yingozi eKoeberg. Uhlalutyo lokhuseleko kwinto enokwenzeka (PSA) yindlela elandela inkqubo ethile yokufumana nokuhlalutya imingcipheko engakho kuyilo nakumsebenzi ukuze kuziwe nezsombululo zokunciphisa ifuthe kwisitishi nakubemi. I-PSR ihlole iPSA ekhoyo ngoku yaza yangqina ukuba iKoeberg iyayithobela imiqathango engundoqo yokhuseleko nokuba eKoeberg kusetyenziswa inkqubo esebezayo yokulawula umngcipheko ukuze kuqinisekiswe ukuba indlela yokusebenza ayiceli mngeni kwimiqathango engundoqo yokhuseleko.

Umngcipheko ophezulu wonyaka kwilungu ngalinye loluntu nakubasebenzi phantsi kweemeko zengozi eKoeberg ezinokukhupha iradiyeyishini awuvumelekanga ukuba udlule kumda $oyi5 \times 10^{-6}$ yabantu abaswelekayo ngonyaka, kune ne- 5×10^{-5} yabantu abaswelekayo ngonyaka, ngokulandeelanayo.

I-PSR ibonise ukuba iKoeberg iyayithobela imiqathango engundoqo yokhuseleko kwaye igcine incopho yomngcipheko kawonke-wonke ungaphantsi nge-3% kumda weNNR omalunga ne- $1,17 \times 10^{-7}$ yabantu abaswelekayo ngonyaka, kwaye igcine nencopho yomngcipheko kubasebenzi ngaphakathi kwesiza seKoeberg ingaphantsi nge-20% yomda weNNR emalunga ne- $7,56 \times 10^{-6}$ yabasebenzi abaswelekayo ngonyaka.

Ukuze iqondakale kakuhle le ngcamango, mhlawumbi ungacinga ngomngcipheko wokusweleka kwingozi yemoto (njengomqhubi, umkhweli, okanye umntu ohamba ngeenyawo) eMzantsi Afrika. Ingxelo yonyaka yokhuseleko ezindleleni yango 2019 ithe bayi-12 921 abantu ababulewe zingozi zeemoto ngo-2018 [33]. Ngokusekelwe kubemi base Mzantsi Afrika abazizigidi ezingamashumi amathandathu (60 million), umlinganiselo ophakathi womngcipheko kukuba abantu abayi-22, kwi-100 000 nganye yabemi (okanye $2,2 \times 10^{-4}$ ngonyaka) kungenzeka babulawe yingozi yemoto eMzantsi Afrika nyaka ngamnye. Loo nto ithetha ukuba ilungu loluntu linamathuba angaphezulu kwe-1 000 okubulawa yingozi yemoto kunawokubulawa yingozi yenyukliya eKoeberg.

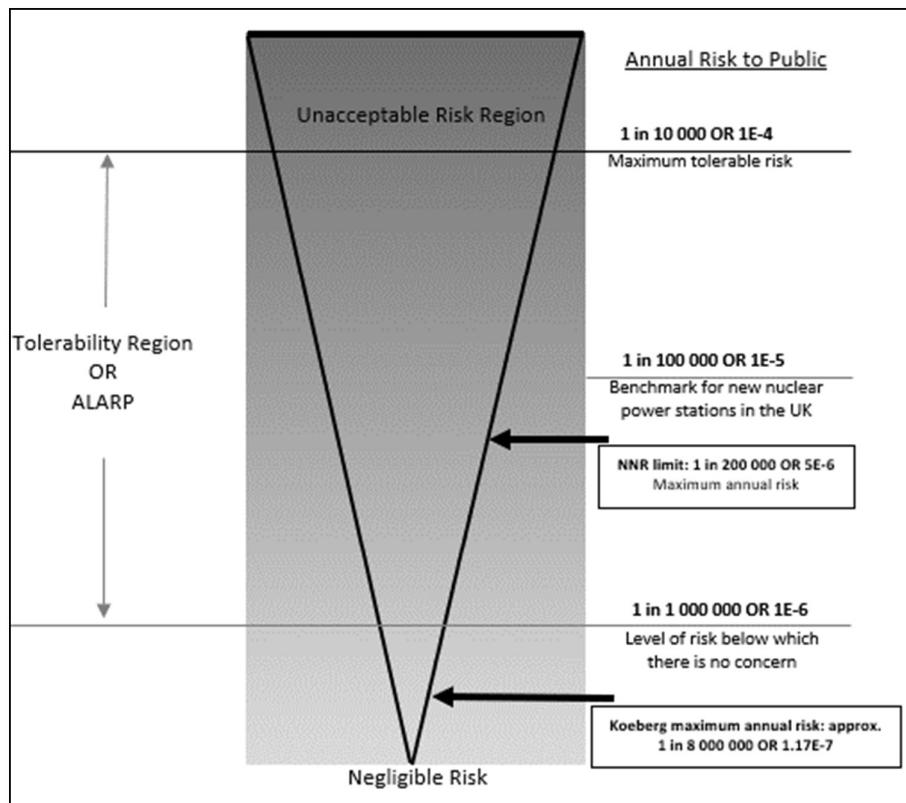

Akukho nantonina eyenziwa ngabantu, ingakumbi indlela yokuphehlia umbane engenamingcipheko. Ngokutsho kwe IAEA, ingundoqo into yokuba imingcipheko ebekwa sisitishi senyukliya ibonakale iphantsi kangangoko kunokwenzeka (As Low As Reasonably Practical [ALARP]) njengoko kuboniswe kuMfanekiso 10, kucingwa ngemigaqo efunwa luqoqosho nokhuseleko. Umngcipheko ophezulu kulo naliphi ilungu loluntu ovela kwisitishi esitsha senyukliya awufanelanga ugqithe ku- 1×10^{-5} yabaswelekayo ngonyaka [6].

YEKAWONKE-WONKE

Umngcipheko waseKoeberg ungaphantsi (ukhuselekile) kunalo kwaye ukummandla owamkelekileyo kumzobo we-ALARP okuMfanekiso 10.

Masiyitsho ke into yokuba nakuba imiqathango engundoqo yokhuseleko ibekiwe yiNNR, akunakufane kwenzeke ukuba nabanina achaphazeleke empilweni okanye asweleke ngenxa yokongeza ixesha lokusebenza kweKoeberg ngeminyaka eyi-20. Akuzange kwenzeke ngozi yenyukliya ukususela oko iKoeberg yaqala ukusebenza. Akukho mnngcipheko ungaafanelekanga kumalungu oluntu okanye kubasebenzi ngenxa yokusebenza kweKoeberg.

IKoeberg izo kuqhubeka ithobela imiqathango engundoqo yokhuseleko ebudeni bexesha leLTO.

Umfanekiso 10: Ukulawula umngcipheko ube phantsi kangangoko kunokwenzeka (ALARP) kuthathwa [6]

10.1.2 Amanqanaba ngamanqanaba obunzulu okhuseleko (Defence in depth) kwizitishi eziphehla umbane ngamandla eNyukliya

I-USNRC ichaza "amanqanaba ngamanqanaba obunzulu okhuseleko (Defence in depth [DiD])" njengendlela yokuyila nokusebenzisa isitishi senyukliya ethintela nenciphisa iingozi ezikhupha iradiyeyishini. Ingcamango yeDiD isetyenziswa kakhulu kwizitishi zenyukliya ukuze

YEKAWONKE-WONKE

kugcinwe umngcipheko wengozi ukumanqanaba amkelekileyo. Umphumela wokusebenzisa le ndlela yeDiD kukuba kubekho amanqanaba aliqela naphinda phindeneyo okukhuseleko (ekwabizwa ngokuba ngamalungiselelo) ukuze kulungiselelw ukuze ukusilela kwabantu noomatshini. Ayikho into enye enokuthi yakusilela eKoeberg yenze kubekho ingozi, akukhathaliseki nokuba ibaluleke kangakanani loo khomponenti ekuqinisekiseni ukuba isitishi esenza umbane nge nyukliya sikhuselekile.

Ukuba kungenzeka kubekho ukusilela kwekhomponenti ebalulekileyo kuhuseleko, esisitishi sixhotyisiwe ukuze loo ngxaki ibonakale kwangoko khonukuze abaqhubi besisitishi balandele amaxwebhu abo baqinisekise ukuba ingozi iyathintelwa.

Itheyibhuli 3: Amanqanaba ngamanqanaba obunzulu okhuseleko (Defence in depth [DiD]) [25]

| Inqanaba le-DiD | Injongo | lindlela ezibalulekileyo |
|-----------------|--|---|
| Inqanaba 1 | Ukuthintela ukusebenza ngendlela engafunekiyo nokusilela | Uyilo olungqingqwa nomgangatho ophezulu wokwakha nokusebenza |
| Inqanaba 2 | Ukulawulwa kokusebenza ngendlela engafunekiyo nokubhaqwa kokusilela | Ukulawula, ukusikela umda, nobuxhakaxhaka boomatshini bokukhusela nezinye iinkqubo zokubeka esweni kobubuxhakaxhaka boomatshini |
| Inqanaba 3 | Ukulawula iingozi ngokwesiseko soyilo | Impawu zokhuseleko zobunjineli nolawulo lwengozi |
| Inqanaba 4 | Ulawulo lweemeko eziqatha zesitishi, kuquka ukuthintelwa kokuhubekeka kwengozi nokunciphisa imiphumela yeengozi ezinkulu | Amanyathelo ancedisayo nokulawulwa kwengozi |
| Inqanaba 5 | Ukuncitshiswa kwemiphumela yeradiyeyishini engamandla xa kungakho ingozi | Intsabelo yemeko yongxamiseko ngaphandle kwesiza saseKoeberg |

I-PSR iwahlore omahlanu la manqanaba eDiD yaseKoeberg. Injongo yohlalutyo ibikukuqonda ukuba anele, amkelekile, kwaye angqingqwa na amalungiselelo eDiDeKoeberg. Amanqanaba amahlanu eDiD achazwa ngokubanzi kwi-IAEA INSAG-10 [25] kwaye aboniswa kwiTheyibhuli 3. Iye yaqinisekiswa into yokuba iKoeberg inamalungiselelo aneleyo okuqinisekisa ukuba amanqanaba eDiD asebenza ngokwanelisekileyo ngoku, kwaye xa eqhubeka elondolozwa futhi ephuculwa, ayakuhlala esebezena ebudenibei LTO. Ukuphuculwa kwamalungiselelo akhoyo ngoku eDiDkuyacetywa kwaye selekuthunyelwe kwiNNR ukuze iyigunyazise njengenxalenye yeziphumo zePSR.

YEKAWONKE-WONKE

10.1.3 Ulawulo Iwengozi

Ulawulo Iwengozi yinxaleny ebalulekileyo yamanqanaba ngamanqanaba obunzulu okhuseleko (DiD). Luquka iinkqubo ezilandelwayo nezicwangciso ezifunekayo ukuze kubuyiselwe isitishi kwimeko yokukhuseleka kwaye kuthintelwe okanye kuncitshiswe umngcipheko wokukhupha iradiyeyishini iye kokusingqongileyo. IKoeberg inamaxwebhu apheleleyo eenkqubo ezinokulandelwa xakunokuba khona ingozi, ikwanazo nezikhokelo zokulawula ingozi enku enokuthi yenzeke ingalindelekanga. La maxwebhu ngawokusetyenziswa ukuze kunqandwe umonakalo kumafutha enyukliya kwaye kuthintelwe okanye kuncitshiswe ukuphuma kweradiyeyishini enokuchaphazela okusingqongileyo.

Ngokuhambisana nemigangatho yelizwe neyamazwe ngamazwe, iKoeberg inemigaqo ebekiwego yokhuseleko eliqela yokulawula iimeko ezingaqhelekanga kuye nezengozi yenyukliya, ukuqinesekisa ukuba akukho mngcipheko ungfanelekanga eluntwini jikelele. Ezi meko zingaqhelekanga nezengozi yenyukliye zibizwa ngokuba ziingozi ezisekelwe kuyilo lwestishi kuba ngenxa yoyilo lwestishi, isitishi singakwazi ukumelana neziganeko ngaphandle kokudlula kwimida egunyazisiweyo. Umzekelo, uyilo IweKoeberg Iwenziwe ngohlobo lokuba ikwazi ukumelana nenyikima, embindi wayo ukwindawo enesiphako, kwiikhilomitha eziyi-8 ukusuka eKoeberg, enesilinganiso esingu-7 ngokwesikali sikaRichter (oko kukuthi, inyikima enku). Ingakwazi nokumelana netsunami enamaza aziimitha eziyi-8 ukuphakama.

EFukushima, iimeko neziganeko zazinzima kakhulu kunoko kwakulindelwe kuyilo lwestishi yaza loo nto yadala ingozi enku kunaleyo uyilo lwestishi lusekelwe kuyo. Umzekelo, itsunami yayingaphaya kodonga olungumqobo oluziimitha eziyi-5,5 ukuphakama yaze yabangela izantyalantyla zamanzi kwiinjini zedizili zemeko yongxamiseko kwiyunithi ezintlanu kwezintandathu zeriyektha yenyukliya[10]. Njengokuba inyikima yatshabalalisa iintambo ezhambisa umbane ukusuka kwisitishi esiwuphehlayo ukuya kubasebenzisi bombane (network grid [igridi]), iFukushima yaphela ingenawo umbane (okanye umbane ogcinelwe ukusekela kwimeko kaxakeka) wokusetyenziswa kubuxhakaxhaka boomatshini bokhuseleko kwiyunithi zeriyektha yenyukliya ezintlanu.

Esi siganeko saseFukushima sibonise ukuba kungenzeka kubekho iimeko eziqatha ngakumbi kunezo zisekelwe kulo uyilo lweengozi zesitishi, nangona amathuba okuba zenzeke emancinci kakhulu. Ezi zaziwa ngokuba ziimeko ezigqithela ngaphaya kuyilo lwestishi.

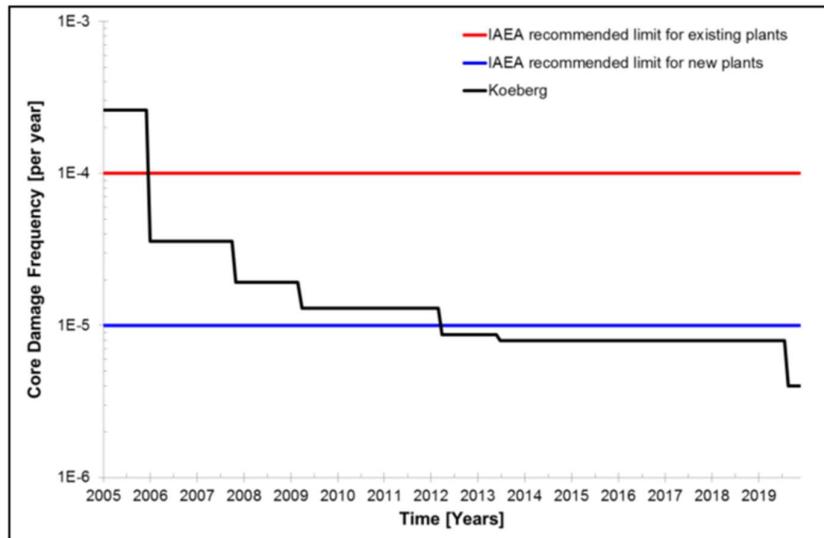

IKoeberg yenze utshintsho kwikhomponenti eziliqela ukuze isebezise izifundo ezifunde eFukushima, kwaye amanye amanyathelo okuphucula ukhuseleko aqukwe kwisicwangciso sokuphucula esidityanisiweyo sePSR. Imizekelo yezinto ezitshintshiweyo eKoeberg ezenzelwa iimeko ezigqithela ngaphaya koyilo lwestishi kukongeza iinjini zedizili eziphathekayo, iimpompo eziphathekayo ukuze kubekho omnye umthombo wamanzi okupholisa amadama amafutha asetyenzisiweyo, izixhobo eziphathekayo zokukhupha ingquslu ebangelwe yinyikima enku, neezixhobo zokunciphisa ihydrogen kwisakhiwo sokugquma iriyekta (autocatalytic recombiner) ukuze kuncitshiswe uquhushumbo lwe-hydrogen. Ukongezelela koko, izikhokelo zokulawula

YEKAWONKE-WONKE

ingozi enkulu zaseKoeberg zinamalungiselelo okusebenzisa iinjini zedizili zokusekela eziphathekayo zemeko yongxamiseko ukwenzela xa kunokuthi ungasebenzi umthombo wombane oyintloko ovela kwigridi yelizwe nakwii njini zedizili zokusekela zemeko kaxakeka. Kucetywa umsebenzi ongakumbi njengamalinge okuqhubeaka kuphuculwa kwaye kuncitshiswa nangakumbi umngcipheko weengozi eziqatha, osele uyingxene ye yemida yolawulo yomngcipheko ebekiwego (jonga uMfanekiso 11).

Njengoko kuchaziwe kwicandelo 10.1, iziphumo zePSR zibonise ukuba iKoeberg iyayithobela imiqathango engundoqo yokhuseleko echazwe kwi-RD-0024 [5]. Umngcipheko wokonakala kwamafutha enyukliya kwiriyektha ngenxa yengozi yenyukliya eKoeberg uye waphucuka ebudenibexesha njengoko bekuphunyezwa uphuculo lokhuseleko olubonakala ngokuncipha kwamatyeli okonakala kwikhomponenti ekufakwa kuyo amafutha enyukliya xakusenziwa umbane (riyektha core) kuMfanekiso 11 yexesha elisusela ku 2005 ukuya ku 2019. Amatyeli okonakala kwe riyektha core ichazwa njengamathuba okuba ingozi ibangele ukuba amafutha enyukliya akwiriyektha onakale kwaye ngoku angaphantsi kwe- $1E-5$ (1×10^{-5} ngonyaka) eKoeberg.

Ngelishwankathelayo, amathuba okuba konakale amafutha enyukliya kwiriyektha eKoeberg ngoku aphantsi kakhulu kwaye ayattelekiseka ngokuyeleneyo nawezitishi zombane wenyukliya ezintsha [6]. Loo nto ibangelwe kukuqhubeaka kusenziwa uphuculo kukhuseleko. Umngcipheko waseKoeberg kulindeleke ukuba uhlale unggagqithanga kwimiqathango engundoqo yokhuseleko ebudenibelTO.

Umfanekiso 11: Amatyeli okonakala kwesiqu ngonyaka

YEKAWONKE-WONKE

10.2 Umngcipheko wempilo yabantu ngenxa yokuchanabeka kwiradiyeyishini

Ifuthe leradiyeyishini kwimpilo yabantu kuthethwa ngalo kweli candelo. Eli candelo liza kubonisa ukuba akukho mngcipheko ungafanelekanga kwimpilo yoluntu ngenxa yokusebenza ngendlela ekhuselekileyo eminye iminyaka eyi-20 kuba amanzi alahlwayo angcoliswe yiradiyeyishini ebudenibet beLTO kulindeleke ukuba ahlale engaphantsi kakhulu kwimida yemiyalelo ebekiwego (onga icandelo 10.2.3). Ubungakanani be radiyeyishini efunyanwa ngabasebenzi (Occupational dose [Idowusi]) yasemsebenzini inganda kancinci ngenxa yokwanda komsebenzi odibene neLTO (umzekelo, ukutshintshwa kweenjini zokwenza umphunga nokutshintshwa kwe-ntloko yomphanda weriyektha (reactor vessel head); kodwa ke, ekubenibet amanqanaba edowusi akhoyo emsebenzini ngoku engaphantsi kakhulu kwimida ebekwa yemiyalelo, akulindelekanga ukuba kuggithwe kwimida yedowusi ebekelwe abasebenzi ebudenibet beLTO. (onga i candelo 10.2.4 necandelo 11.5).

10.2.1 Iradiyeyishini kubomi bemihla ngemihla

Lo mbhalo ulandelayo uthathwe kwiphepha leIAEA lezibakala ngeradiyeyishini [9]:

Imathiriyali ezineradiyeyishini yendalo zikho kumphezulu womhlaba, kwimigangatho neendonga emakhayeni ethu, ezikolweni, naseziofisini, nasekutyeni esikutyayo nakwiziphuzo esiziselayo. Kukho iirhasi ezineradiyeyishini kumoya esiwuphefumlayo. Imizimba yethu – izihlunu, amathambo, nezihlunwana – ziqlathe iimathiriyali ezineradiyeyishini ebakho ngokwendalo.

Sichanabeke nakwiradiyeyishini eyenziwe ngabantu (njengeEksreyi), iradiyeyishini esetyenziswa ukuxilonga izifo nonyango lomhlaza. Iziphumo zokuvavanya iziqhushumbisi zenyukliya, neemathiriyali ezincinci ezineradiyeyishini ezingena kokusingqongileyo zivela kwizitishi eziphehla umbane ngamalahla nangenyukliya, nazo ziyimithombo yokuchanabeka kwabantu kwiradiyeyishini.

I-radioactivity ligama elisetenziswa ukuchaza ukuqhekeka kweeathomu (atoms). Iathomu ingachazwa ngokwenani lee-protons (positively charged) kwinyukliyasi yayo. Ezinye izinto zendalo azizinzanga. Ngoko ke, inyukleya yazo iyaqhekeka okanye iphelelwengamandla emva kwexesha, ngaloo ndlela ikhuphe amandla ayiradiyeyishini. ESI senzeko sendaloo sibizwa ngokuba yi-radioactivity. Ukuphelelwengamandla kwe nyukleyi okubangela iradioactivity kulinganiselwa ngokweeyunithi ezibizwa ngokuba zii-becquerels. I-becquerel enye ilingana noqhekeko olunye ngomzuzwana.

Ixesha elithathayo ukuze isiqingatha see-radionuclides ziqhekeke okanye ziphelelwengamandla libizwa ngokuba sisiqingatha sobomi. Le nto iyahluka kwi-radioelement nganye, ukusuka kwinxalenye yomzuzwana ukuya kwiibhiliyonzi zeminyaka. Umzekelo, isiqingatha sobomi be-iodine-131 ziintsuku ezsibhozo, kodwa kwi-uranium-238, ekhoyo ngamanani ahlukeneyo ehlabathini jikelele, yiminyaka eyi-4,5 yamawaka ezigidi (bhiliyonzi). I-Potassium-

YEKAWONKE-WONKE

40, engumthombo oyintloko we-radioactivity emizimbeni yethu, inesiqingatha sobomi esiyi-1,42 yeebhiliyon zeminyaka.

Igama elithi "radiyeyishini" libanzi kakhlulu kwaye liquka izinto ezifana nokukhanya kunye namaza kanomathotholo. Kwimeko yethu, ibhekisela kwiradiyeyishini "efaka i-ion", nto leyo ethetha ukuba ngenxa yokudlula kwalo radiyeyishini entweni, ingayibangela ukuba ibenombane okanye ibe ne-ion. Kwiizihlunwana zomzimba eziphilayo, ii-ion zombane eziveliswa yiradiyeyishini zingachaphazela iinkqubo eziqhelekileyo zebhayoloji. Iradiyeyishini eziqhelekileyo ezifaka i-ion ekudla ngokuthethwa ngazo zezi:

Iradiyeyishini ye-alpha inamasuntsu anzima, atshajiwego akhutshwa ziiathomu zezinto ezifana ne-uranium ne-radium. Iradiyeyishini ye-alpha ingaphelisa ngokupheleleyo liphepha okanye yinwebu egubungele ulusu lwethu (epidermis). Kodwa ke, iimathiriyalu ezikhupha i-alpha zingena emzimbeni naxa siphefumla, sisitya, okanye sisela, zichanaba izihlunwana ezingaphakathi ngokungqalileyo kwaye, ngenxa yoko, zingakwazi ukudala umonakalo emzimbeni.

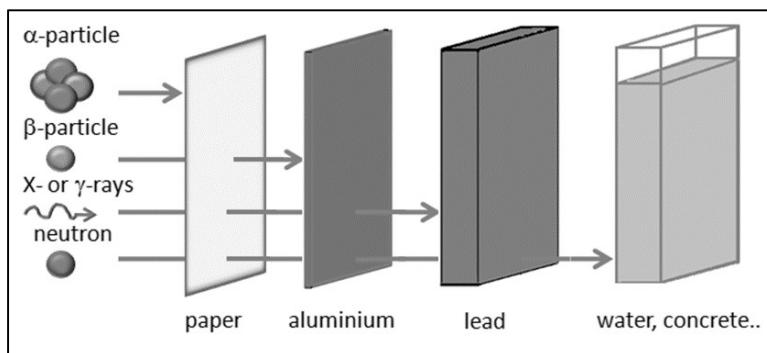

Iradiyeyishini ye-beta inee-electrons (negatively charged). Zingena ngamandla kunamasuntswana e-alpha kwaye ziyakwazi ukuggitha kwsentimitha e-1 ukuya kwezi-2 zamanzi. Ngokuqhelekileyo, icangci le-aluminium elinobudeki beemilimitha ezimbalwa liyayinqanda iradiyeyishini ye-beta.

Imitha ye-gamma yiradiyeyishini ye-electromagnetic efana neEksreyi, ukukhanya, namaza kanomathotholo. Imitha ye-gamma, kuxhomekeka kumandla ayo, ingatyhubela ngaphaya komzimba womntu, kodwa inqandwe ziindonga ezideki zekhonkrithi okanye ilothe.

Li-neutrons ngamasuntswana angatshajwanga kwaye azivelisi i-ion ngokungqalileyo, kodwa xa zidibana neeathomu zezinto zingadala i-alpha, i-beta, i-gamma, okanye iiEksreyi, ethi yona idale i-ion. Li-neutrons ziyakwazi ukutyhubela ezintweni kwaye zinganqandwa kuphela yikhonkrithi engqindilili, ngamanzi, okanye yiparafini.

Ukuze kuncitshiswe ubungozi beradiyeyishini, kusetyenziswa izixhobo ezahlukeneyo zokugquma ukuze kukhuselwe uwonke-wonke ekuchanabekeni ngokungeyomfuneko kwiradiyeyishini, njengoko kuboniswe kuMfanekiso 12. Nangona singenakuyibona okanye siyive iradiyeyishini, ingabonwa ize ilinganiselwe nkqu nentwana yayo ngezixhobo zokuyilinganisa ezilula kakhlulu.

YEKAWONKE-WONKE

Umfanekiso 12: lintlobo zeradiyeyishini efaka i-ion kunye nezinto zokukhusela kuzo

10.2.2 Idowusi yeradiyeyishini neengozi emzimbeni ezibangelwa kukuchanabeka kwiradiyeyishini

Idowusi yeradiyeyishini abachanabeka kuyo abasebenzi noluntu ngenxa yomsebenzi owenziwa eKoeberg iphantsi kakhulu kunedowusi ekulindelwe ukuba idale umonakalo.

Idowusi efunxiweyo ngamandla afakte yiradiyeyishini kwizihlunwanana zomzimba ilinganiswa nge-gray (Gy). Iziphumo ezibakho emzimbeni ngenxa yokungena kwe-ion ziyahluka ngokohlobo namandla. Isilinganiso somngcipheko womonakalo emzimbeni silingana nedowusi yeradiyeyishini efunyanwa seso sihlunwana somzimba. Iyunithi yedowusi yeradiyeyishini elinganayo yi-sievert (Sv). Ekubeni i-sievert enye inomlinganiselo omkhulu, iidowusi zeradiyeyishini ekudityanwa nazoo ngokuqhelekileyo zichazwa ngokwe-millisievert (mSv) okanye i-microsievert (μ Sv), ezisisinye kwiwaka nesinye kwisigidi se-sievert, ngokulandelelana. Iyunithi endadlana yedowusi yeradiyeyishini elinganayo yi-rem (i-roentgen equivalent man). Uguqulelo: 1 rem = 0,01 Sv; 1 Sv = 100 rem.

Umzekelo, iEksreyi enye yesifuba ikhupha malunga ne-0,1 mSv yedowusi yeeradiyeyishini, logama iskeni se-computer tomography (CT) somzimba wonke sicanaba umntu kwi-10 mSv [26]. Ngokomlinganiselo ophakathi, ukuchanabeka kwiradiyeyishini (exposure to radiation) ngenxa yayo yonke imithombo yendalo kuba malunga ne-2,4 mSv ngonyaka [9]; kodwa ke, eli nani liselonkungafani, kuxhomekeka kwindawo akuyo umntu, ngamakhulu aliqela eepesenti. (Umzekelo, eUnited States of America, iradiyeyishini evela kwindalo imalunga ne-3 mSv ngonyaka [26].)

Xa kubalwa idowusi yoqobo kuye kucingelwe zizonke iidowusi ezilinganayo kuzo zonke izihlunwana namalungu omzimba. Izihlunwanana namalungu omzimba angafaniyo ayahluka kwindlela asabela ngayo kwiradiyeyishini, ngoko idowusi yoqobo yidowusi efunyanwa nguwo wonke umzimba.

Iingozi ezidibene nokuchanabeka kwiradiyeyishini zixhomekeka kuhlobo lweradiyeyishini, ubude bexesha efakwa ngalo, nobungakanani bamandla wayo angena kwizihlunwana

YEKAWONKE-WONKE

zomzimba. Xa amanqanaba okuchanabeka ephezulu ngokwaneleyo, iradiyeyishini efaka ion idala utshintsho kumalungwana, idale umonakalo kumalungwana, okanye yenze amalungwana afe kuze kulandele imiphumela emibi kakhulu kwimpilo (umzekelo, ukutsha kolusu nokukhula kwenwebu emehlwani (cataracts). Ezi zaziwa njengeziphumo eziqinisekileyo. Iziphumo eziqinisekileyo zidla ngokubakho kwidowusi eziphezulu. Azikho iziphumo eziqinisekileyo ezilindelekileyo xa umntu efumene ngaphantsi kwedowusi eyi-100 mGy ngaphezu kweradiyeyishini esichanabeka kuyo evela kwindalo [8].

Imiphumela engenakuqikelelwa yeradiyeyishini iquka umhlaza neziphenem zemfuzo. Imiphumela engenakuqikelelwa iyalibaziseka ize ivele ngexesha elithile emva kokuba umntu echanabeke kwiradiyeyishini kwaye ngokuqhelekileyo emva kweminyaka emininzi. Idowusi ezingaphaya kwe-100 mSv zinyusa umngcipheko womhlaza. Kodwa ke, xa iradiyeyishini iyidowusi ephantsi (ingaphantsi kwe-100 mSv [8]) kusekho ukungaqiniseki okukhulu ngemiphumela xa iyonke. Nangona sinolu lwazi luqokelelwego ngemiphumela yeradiyeyishini, akukacaci ngokupheleleyo enoba ukuchanabeka kumanqanaba endalo eradiyeyishini kubeka impilo emngciphekweni nangayiphi na indlela.

Indlela ezisisiseko zokukhusela kwiradiyeyishini ziisetenziswa ngendlela efanayo ehlabathini lonke. IKomishini Yamazwe Ngamazwe Yokhuseleko Kviradiyeyishini (International Commission on Radiological Protection [ICRP]) nakuphi na ukuchanabeka komntu okudlula kwiradiyeyishini eveliswa yindalo kufanele kugcinwe kuphantsi kangangoko kunokwenzeka (as low as reasonably achievable [ALARA]), kodwa kube ngaphantsi kwemida yedowusi yomntu ngamnye. Umda wedowusi yomntu ngamnye kubasebenzi abasebenza ngeradiyeyishini ngokomlinganiselo ophakathi weminyaka emihlanu yi-100 mSv, yaye kuluntu jikelele yi-1 mSv ngonyaka (ungaphantsi kwedowusi yeradiyeyishini evela kwindalo).

Le mida yedowusi ziingcebiso ezsuka kwi-ICRP kwaye yamkelwe zizitishi eziphehla umbane wenyukliya. Ibekwe ngokusekelwe kwindlela yobulumko ngokucingela ukuba akukho dowusi isikelwego ngezantsi kwayo ekungayi kubakho miphumo mibi kwimpilo yabantu. Loo nto ithetha ukuba nayiphi na idowusi eyongezwayo iza kudala ukwanda okukhulu kumathuba okuchaphazeleka kwempilo. Obu budlelwane akukaqinisekwa ngabo kwiidowusi eziphantsi (ngaphantsi kwe-100 mSv); kodwa ke, ukuze silumkele into esingayaziyo, nayiphi na idowusi iggalwa njengenokuyichaphazela impilo.

I-ICRP ikhuthaza imigaqo esisisiko ebalulekileyo emithathu kukhuseleko Iweradiyeyishini: izizathu ezixhasayo; izinto ezintle ezifumanekayo ngokuchanabeka kwiradiyeyishini zimele zibe ninzi kunezimbi; ukusebenzisa kangangoko: idowusi kufuneka igcinwe iphantsi kangangoko kunokwenzeka; kwaye nemida yedowusi: iyonke idowusi kuye nawuphi umntu kufuneka ihlale iphakathi kwemida.

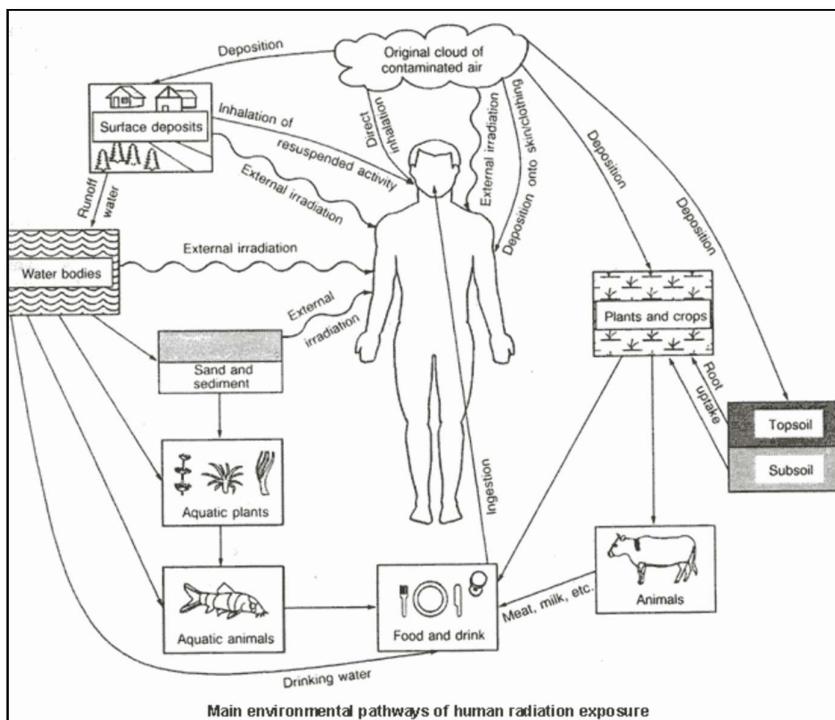

Ngokubanzi, kube kunjalo nalapha eKoeberg, umlinganiselo ophakathi wedowusi yonyaka efunyanwa ngabantu abasebenza ngeradiyeyishini nanguwonke-wonke iphantsi kakhulu kunemida yedowusi yomntu ngamnye. Ngoko, akunakufane kwenzeke ukuba nabani na

YEKAWONKE-WONKE

(kuluntu okanye kubasebenzi) achaphazeleke empilweni ngenxa yokuba kwandiswe ixesha lokusebenzisa iKoeberg ngeminyaka eyi 20.

10.2.3 Ifuthe leradiyeyishini kuluntu

Ukuchanabeka kungahlahlewa ngokokwamanqanaba amathathu: ukuchanabeka emsebenzini (ukuchanabeka kwabasebenzi ngenxa yomsebenzi wabo), ukuchanabeka kwezamayeza (ukuchanabeka ngenxa yokuxilongwa okanye unyango), nokuchanabeka kukawonke-wonke (ukuchanabeka koluntu kwiradiyeyishini ngenxa yokuchanabeka kuzo zonke iintlobo zemithombo yeradiyeyishini, eyenziwe ngabantu okanye eyendalo).

Umfanekiso 13: lindlela zokuchanabeka [28]

Ukuchanabeka ngeradiyeyishini kungakokwangaphakathi okanye okwangaphandle komzimba futhi kungafunyanwa ngeendlela ezahlukenyero zokuchanabeka, umzekelo, ngokusezelala, ngokuginya, okanye ngokungqalileyo (jonga Umfanekiso 13). Ukuchanabeka ngaphakathi kwenzeka xa i-radionuclide isezelwe okanye iginyiwe, noxa ukuchanabeka kwangaphandle kungenzeka xa umntu echanabeke kwiradiyeyishini evela kumthombo ongaphandle njengeEksreyi yesifuba.

YEKAWONKE-WONKE

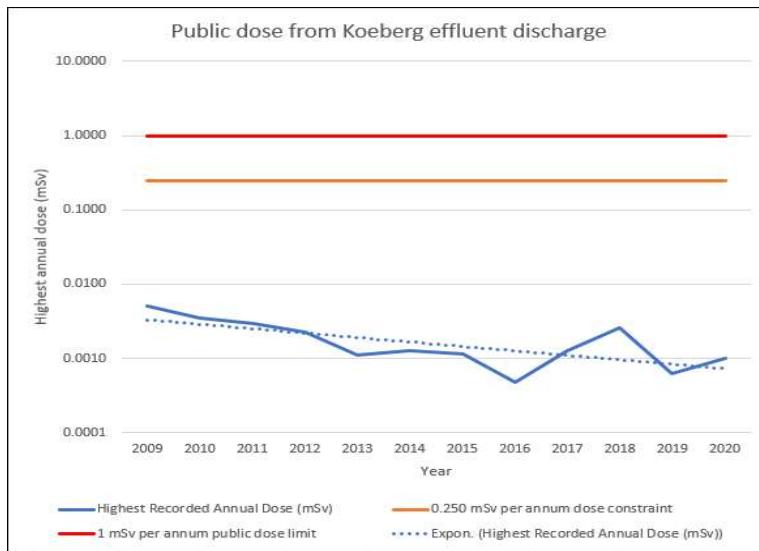

Imingcipheko yempilo edibene nokuchanabeka kwiradiyeyishini ngenxa yomsebenzi owenziwa eKoeberg iphantsi kakhulu kuba idowusi oluchanabeke kuyo uluntu incinci kakhulu. Umda wedowusi yoqobo obekwe ngumthetho kuluntu ngenxa yazo zonke izinto ezigunyazisiweyo ezenziwayo yi-1 mSv ngonyaka, ngelixa isithintelo sedowusi yomntu ngamnye osebenza eKoeberg kumntu ongummeli iyi-0,25 mSv ngonyaka [7]. Isithintelo sedowusi eyi-0,25 mSv injongo yayo kukuqiniseka ukuba iyonke imithombo enokuba negalelo ekuchanabekeni komntu ongummeli ihlala ingaphantsi komda wedowusi oyi-1 mSv ngonyaka.

Imigangatho yokhusaleko kunye nezenzo zolawulo olukwimiyalelo (safety standards and regulatory practices [SSRP]) [7] olukhutshwe ngokoMthetho WeNNR ifuna kuthathwe amanyathelo ahambelane nobukhulu namathuba okuchanabeka ukuze kuqinisekiswe ukuba ukuchanabeka okudibene nomsebenzi waseKoeberg kugcinwa kwiALARA, sele kuqwalaselwe imiba yoqoqosho neyentlalo.

Loo nto ithetha ukuba kufanele kuthathwe onke amanyathelo afanelekileyo ukuze kulungiswe ukhuselo lweradiyeyishini ukuze lusebenze kangangoko, kwaye loo nto ingaqua ukuqonda umthombo weradiyeyishini, iindlela ekungakhethwa kuzo zokufikelela kwisiphumo esinqwenelekayo, iindlela zokubeka esweni nezokulinganisa, nokugquma.

Ukongezelela koko, njengenxalenyne yomsebenzi oqhelekileyo, iKoeberg ikhupha imichiza yerhasi kwakunye namanzi angcoliswe yiradiyeyishini alahlwa kokusingqongileyo phantsi kweemeko ezilawulwayo nezibekwe esweni ukuze kuqinisekiswe ukuba umngcipheko kuluntu uphantsi kangangoko kunokwenzeka. Imichiza yeerhasi kwakunye namanzi angcoliswe yiradiyeyishini ezikhutshwayo zigcinwa zingaphantsi kwemida yonyaka egunyazisiweyo yezinto ezichithwayo (annual authorised discharge quantities [AADQ]), nto leyo eqinisekisa ukuba uyathotyelwa umda wonyaka wedowusi yoqobo. liAADQ yimida yolawulo esekiweyo, yaye ifuthe kokusingqongileyo luncinci kwaye luthathwa njengolukhuselekileyo xa zikhutshwa ngomlinganiselo ongaphantsi kwale mida. EKoeberg, idowusi enxulumene namanzi angcoliswe yiradiyeyishini alahlwayo ibalwa ngokwekota nangokonyaka kwaye neNNR iyayinikwa ingxelo yezi ziphumo. Idowusi kawonke wonke ebangelwa kukuchithwa kwamanzi angcoliswe yiradiyeyishini yaseKoeberg iboniswe kuUmfanekiso 14 kwixesha elisusela ku 2009 ukuya ku 2020.

YEKAWONKE-WONKE

Umfanekiso 14: Ukuchanabeka koluntu ngenxa yomsebenzi owenziwa eKoeberg

Iziphumo zibonisa ukuba idowusi yeradiyeyishini ingaphantsi kakhulu kwisithithentelo sedowusi esiyi-0,25 mSv ngonyaka samanzi angcoliswe yiradiyeyishini achithwayo. Idowusi ziyancipha (ziphucuke) ekuhambeni kwexesha ngenxa yokuncitthiswa kwamanzi angcoliswe yiradiyeyishini achithwayo okwenziwe ngokuphuculwa kokuthembeka kweetyhubhu zamafutha enyukliya. Oku kuphucula (ukuncipha kwenkcitho eneradiyeyishini) ngokuhamba kwexesha kungumzekelo weenzozo efunyanwa zizitishi zombane wenyukliya kwindlela yazo yokuziphatha yokwabelana ngamava omsebenzi phakathi kwazo, yaye kule meko, nokuchazela abavelisi bamafutha enyukliya ukuze baphucule ukhuseleko nendlela abasebenza ngayo. Uhlolo olwensiwe kamva lwedowusi lubonise ukuba, kule minyaka ilishumi idlulileyo, idowusi yoluntu iye yaqhubeka ingaphantsi kwe-1% yomda wedowusi yoluntu oyi-1 mSv ngonyaka.

Idowusi kawonke-wonke (ebizwa ngokuba luhlolo olwensiwe kamva lwedowusi) isekelwa kweyona nuclide ikhutshiwego elinganiswe ngexesha ekufakwa ingxelo ngalo esitishini, kucingwa ngezilwanyana nezityalo eziphila kwisizasaseDuynefonteyn, kunye nembalu yokuphehla umbane yeKoeberg neemeko zokusasazeka kokusingqongileyo ebezikhlo ngexesha ekufakwa ngalo ingxelo.

Uhlolo lwemisebenzi eyenziwa eKoeberg akulindelwanga ukuba itshintshe ebudenibeiLTO; ngako oko, inkcitho engcoliswe yiradiyeyishini ekhutshwayo kwixesha elizayo akulindelekanga ukuba ichaphazeleke kakubi, kwaye idowusi kawonke-wonke eqikelelwayo yonyaka kulindelwe ukuba kwaye ngaphantsi kakhulu kumda obekwa yimiylelo ebudenibeiLTO. (Jonga necandelo 10.3.)

YEKAWONKE-WONKE

10.2.4 Ukuchanabeka kwiradiyeyishini emsebenzini

Nangona kulindeleke ukuba idowusi yasemsebenzini inyuke ngexesha elifutshane ngenxa yomsebenzi ingakumbi wokutshintsha nokuphucula ubuxhakaxhaka boomatshini neekhomponenti zesitishi, akulindelwanga ukuba inyuke kakhulu, kwaye umyinge wedowusi yolawulo obekiwego awuyi kugqithwa nangaliphi na ixesha ebudeni beLTO.

Abasebenzi abaqeshwe kwaEskom (abaqeshwe isigxina kwakunye neekontraka) njengabasebenzi beradiyeyishini baye bahlolwe impilo ukuze kufikwe kwisiggibo sokuba bakulungele na ukusebenza kwiindawo ezineradiyeyishini. Ngaphambi kokuba basebenze kummandla oneradiyeyishini, abasebenzi bayaqeqeshwa baze bagunyaziswe njengabasebenzi beradiyeyishini. Le nto yenza abasebenzi bafunde baze baqonde iingozi ezidibene nokusebenza ngeradiyeyishini ekumanqanaba aphezulu kwaye bazi nokuba ngawaphi amanyathelo akhoyo okubakhusela. Abasebenzi beradiyeyishini banikwa izixhobo zokuzikhussela ezifana nedowusimitha ye-elektroniki eyeyabo kune ne-thermo-luminescent detector eziponiswe Umfanekiso 15 Umfanekiso 16, ngokulandelelana kwayo. Ezi zixhobo zinxitywa ukuze kubekwe esweni amanqanaba edowusi yeradiyeyishini efunyanwa ngabasebenzia besebenza kwimimandla evelisa iradiyeyishini (eyaziwa ngokuba yimimandla elawulwayo).

Umfanekiso 15: Idowusimitha ye-elektroniki yomntu (iEPD)

Umfanekiso 16: Idowusimitha ye-thermo-luminescent (TLD)

YEKAWONKE-WONKE

Abasebenzi beradiyeyishini abenza umsebenzi kummandla olawulwayo, banikwa nezixhobo zokukhusela imizimba ezhambelana nokhuseleko olufunekayo ukuze kuthintelwe ukusuleleka yiradiyeyishini kunye nokuqaphela isixa sedowusi abayifumanayo ngalo lonke ixesha.

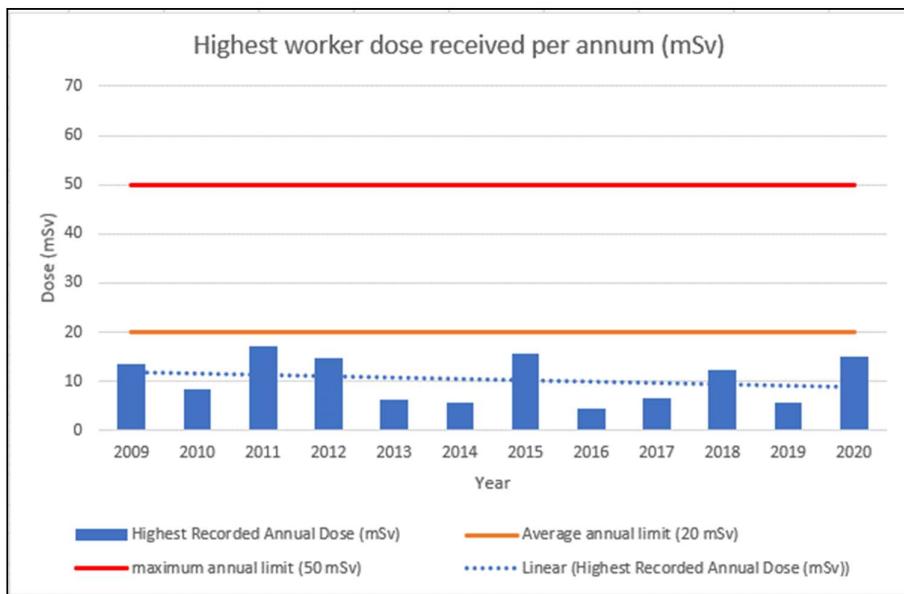

Ukuze kuncitshiswe imiphumela eyingozi yeradiyeyishini xa kuphathwa imithombo yeradiyeyishini, lemiba ilandelayo "ixesha, umgama, nokugquma" exhasa umgaqo weALARA wokhuseleko lwe radiyeyishini ibekwe elisweni, engacaciswa ngolu hlobo:

Okukhona lilide ixesha umntu alichitha kufutshane nomthombo weradiyeyishini, kukhona isiya ibaninzi idowusi ayifumanayo kuze, ngenxa yoko, ube phezulu umngcipheko kwimpilo.

Okukhona umfutshane umgama phakathi komthombo weradiyeyishini nomntu osebenzayo, kukhona isiyaa ibaninzi idowusi ayifumanayo kwaye usiba phezulu umngcipheko kwimpilo.

Okukhona ingqindilili imathiriyalu azigqume ngayo umntu kuhlobo oluthile lweradiyeyishini, kukhona lungcono ukhuseleko kwingozi yeradiyeyishini.

Xa kulindelekile ngokwezicwangciiso neemfuno zomsebenzi ukuba abantu basebenze kwindawo aphi bafumana khona idowusi, owona myinge uphezulu wedowusi yomntu omnye yi-20 mSv ngonyaka ebalwa ngokomlinganiselo ophakathi kwixesha elisikiwego leminyaka emihlanu (100 mSv kwiminyaka emihlanu), kukho umqathango othi idowusi ayifanelanga idlule ku-50 mSv ngawo nawuphi unyaka omnye. Idowusi zabasebenzi baseKoeberg zingaphantsi kwemida yolawulo ebekiwego; umzekelo, eyona dowusi iphezulu ibiyi-17 mSv ngo 2011 (umda uthi 50 mSv). Umfanekiso 17 ubonisa ezona dowusi zabasebenzi ziphezulu phakathi kuka 2009 no 2020. Kukho ukuncipha (ukuphucula) ebuden'i beli xesha.

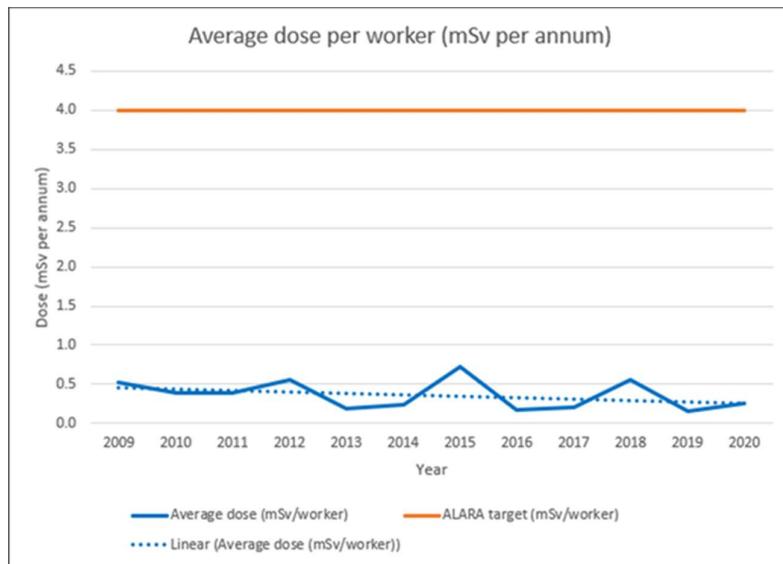

Umfanekiso 17: Eyona dowusi iphezulu ifunyenwe ngumsebenzi ngonyaka

YEKAWONKE-WONKE

I-ALARΑ ijolise kumlinganiselo ophakathi wonyaka eyi-4 mSv kwidowusi yabasebenzi [5]. Eli nani kujoliswe kulo lingaphantsi kakhulu kumyinge wedowusi oyi-20 mSv ngonyaka kubasebenzi kubalwa umlinganiselo ophakathi yeminyaka emihlanu elandelanayo. IKoeberg ibisoloko ilifikelela kweli nani ledowusi ekujoliswe kulo eliyi-4 mSv kwixesha lokuhlola elisusela ku 2009 ukuya ku-2020, njengoko kubonisiwe kuMfanekiso 18. Umlinganiselo ophakathi wedowusi ungaphantsi kwe-1 mSv kumsebenzi ngamnye ngonyaka. Ukongezelela koko, umgangatho uyaphucuka (idowusi yeradiyeyishini iyancipha) ngokuhamba kwexesha ngenxa yamanyathelo okunciphisa idowusi yeradiyeyishini aye athathwa eKoeberg.

Imida yolawulo ebekiwego kwakunye neezinto ekojoliswe kuzo zolawulo lwedowusi yabasebenzi kulindeleke ukuba iqhubuke injalo ebuden bexesha leLTO, kwaye idowusi yasemsebenzini kulindeleke ukuba ihlale ingaphantsi kwemiyinge yolawulo ebekiwego kwakunye nezinto ezi jolisiwego ngalo lonke ixesha leLTO.

i-PSR (Inkqubo yokuhlola ukhuseleko yamaxesha-ngamaxesha engqamene ne LTO), ihlole inkqubo yokukhusela kwiradiyeyishini yaza yayifumanisa ihambisana noko kufunwa ngamazwe ngamazwe, liliizwe nayimiqathango yolawulo. Imigaqo esisiseko yokukhusela kwiradiyeyishini (into ethethelela ubukho bayo, ukusebenzisa kangangoko, nemida yedowusi) iza kusetyenziswa ngokungqongqo ukuze kuqinisekiswe ukuba idowusi ifunyanwa kuphela xa kukho inzozo naxa kungekho mngcipheko unga fanelekanga kubasebenzi okanye kuluntu.

Umfanekiso 18: lavareji yedowusi yomsebenzi ngamnye ngonyaka (mSv)

YEKAWONKE-WONKE

10.3 Ifuthe leLTO kokusingqongileyo

I Koeberg izibophelele kumgaqo-nkqubo othi kungenziwa monakalo kokusingqongileyo nowokuba kuqinisekiswe ukuba ukukhuseleka kwiradiyeyishini kuba kwindawo yokuqala. Inkubo yokulawula okusingqongileyo ihambelana ne-ISO 14001 (umgangatho wamazwe ngamazwe ochaza izinto ezifunekayo kwinkqubo esebebenzayo yokulawula okusingqongileyo). Inkubo yayo yolawulo edityanisiweyo ihambelana ne -ISO 9001 (umgangatho wamazwe ngamazwe ochaza izinto ezifunekayo kwinkqubo elawula umgangatho) kwakunye ne-RD-0034 (uxwebhu lweNNR oluthetha ngomgangatho nezinto ezifunekayo kulawulo lokhuseleko eKoeberg) [11].

Ifuthe lomsebenzi owenziwa kwesi sitishi kwiinkalo ezahlukeneyo zokusingqongileyo liye lahlola kusenzelwa iLTO ukuze kungqinwe ukuba izinto ezichithwa kokusingqongileyo ezineradiyeyishini nezingenaradiyeyishini zingaphantsi kwemida ebekiwego kwaye zihambelana nemigaqo ebekwe ngamagunya alawulayo.

I Koeberg inenkubo esebebenzayo yokubeka esweni ifuthe lenkcitho yamanzi angcoliswe yiradiyeyishini ezichithelwa kokusingqongileyo, njengoko kufunwa yimigangatho yokhuseleko naluqheliselo olufunwa kwimiyalelo yeSSRP ebekwe yaze yaziswa ngokoMthetho We-NNR [7]. linkqubo zaseKoeberg zokulawula inkcitho engcoliswe yiradiyeyishini ekhutshwayo zinexesha zisetyenziswa kwaye ziqaqinisekisa ukuba inkcitho engcoliswe yiradiyeyishini ekhutshwayo ayigqithi kwimida ebekwa yolawulo ebekiwego nakwi-ALARA. Eli candelolilandelayo liza kubonisa ukuba ifuthe kokusingqongileyo ngenxa yomsebenzi owenziwa ngoku eKoeberg lincinci kwaye lingaphantsi kakhulu kwimida ebekwe yimiialelo yaye kulindeleke ukuba liqhubekke lingaphantsi kakhulu kwimida ebekwa yimiialelo ngalo lonke ixesha leLTO.

10.3.1 Imida ebekiwego yenkcitho engcoliswe yiradiyeyishini ekhutshelwakokusizingqongileyo xa kusetyenzwa

Njengenxaleny yomsebenzi oqhelekileyo, iKoeberg ikhupha kokubini imichiza yeerhasi namanzi angcoliswe yiradiyeyishini ezikhutshelwa kokusingqongileyo phantsi kweemeko ezilawulwayo nezibekwe esweni ukuze kuqinisekiswe ukuba idowusi kuluntu iphantsi kangangoko kunokwenzeka. Imichiza yeerhasi kune namanzi angcoliswe yiradiyeyishini ezikhutshwayo kufuneka zihambisane nemida yonyaka egunyazisiweyo yezinto ezichithwayo (iiAADQ), ethobela umda wonyaka wedowusi yoqobo ebekwe kwiSSRP [7].

Njengoko kutshiwo kwicandelo 10.2.3, umda wedowusi yoqobo kuluntu ngenxa yazo zonke izenzo ezigunyazisiweyo yi-1 mSv ngonyaka, ngelilixa isithintelo sedowusi yomntu ngamnye osebenza eKoeberg kumntu ongummeli iyi-0,25 mSv ngonyaka [7]. Esi sithintelo sedowusi yesibini injongo yaso kukujiniseka ukuba jyonke imithombo enokuba negalelo ekuchanabekeni komntu ongummeli ihlala ingaphantsi komda wedowusi oyi-1 mSv ngonyaka.

YEKAWONKE-WONKE

linkqubo ezibeka esweni inkcitho engcoliswe yiradiyeyishini echithwa yiKoeberg kokusingqongileyo ziye zahlolwa kwiPSR. I-PSR ingqinile ukuba idowusi yonyaka eqikelelwayo kusetyenziswa ulwazi ngenkitho yamanzi angcoliswe yiradiyeyishini ekhutshwayo nogxininiso kokusingqongileyo kule minyaka ilishumi edluleyo ibingaphantsi kwe-1% ye-1 mSv ngonyaka yomda wedowusi yoluntu, kwaye ingaphantsi kakhulu kwinqanaba leradiyeyishini efumaneka kwindalo. Kuba imida yolawulo yedowusi ebekiwego ihambisana nemigangatho yamazwe ngamazwe, akulindelekanga ukuba itshintshe ebudeni beLTO, yayee akukhomfuneko yokutshintsha iinkqubo ezibeka esweni inkcitho engcoliswe yiradiyeyishini ekhutshwayo nokusingqongileyo ingakumbi kwiLTO.

Nangona kunjalo, kukho amanyathelo athathwayo ukuze kuphuculwe ukubekwa esweni kwamanzi angaphantsi komhlaba kwisiza saseKoeberg kwaye kuqukwie ii-nuclide ezingakumbi xa kubekwa esweni inkcitho engcoliswe yiradiyeyishini ekhutshwayo naxa kuhlolwa idowusi. Oku kusesekelwe kwiingcebiso zePSR yakutshanje ukuze ichongwe kwaye iphawuleke ngcono inkcitho engcoliswe yiradiyeyishini ekhutshwayo.

10.3.2 Ukubeka esweni imichiza yerhasi namanzi angcoliswe yiradiyeyishini ukuze kulawulwe inkcitho ekhutshwayo

IKoeberg inesakhiwo esikhulu esimileyo esigubungelayo, nto leyo ethintela ukuphuma kweeradionuclides xa kunokwenzeka ingozi. Nangona kunjalo, xa kusetyenzwa ngendlela eqhelekileyo kwesi sitishi sombane kufuneka kuhutshwe ezinye iinkcithoo zamanzi angcoliswe yiradiyeyishini phantsi kweemeko ezilawulwayo kusetyenziswa iinkqubo zokubeka esweni inkcitho eneradiyeyishini echithwayo. Nangona uninzi lwe-radioactivity luphelela ngaphakathi kwee-pellet zamafutha enyukliya neetyhubhu, intwana ye-radioactivity iyaphuncuka kwii-fuel rods ize ingcolise amanzi apholisa iriyektha. Ngaphandle kwe-radioactivity evela kumafutha, amanzi apholisa isekethi eyintloko (primary coolant system) nawo angcoliswa yiradiyeyishini evela kwii-neutron.

Ukulawulwa kwerhasi elahlwayo eneradiyeyishini

Inkqubo yokulawula inkcitho yerhasi eneradeyeyishini ekhutshwayo iqokelela iirhasi ezineradiyeyishini kumanzi apholisa iriyektha kwisekethi eyintloko. Ezi rhasi ziyakhutshwa zize zithunyelwe kwiitanki ezimbini ezigcina iirhasi. Ezi tanki zimbini zizigcinayo zivumela iirhasi ezinesiqingatha sobomi esifutshane ziphelelwe ngamandla enyukliya ukuba ixesa liyavuma, ngokuqhelekileyo kushiyekwana yee-radionuclide ezinesiqingatha sobomi eside ukuze zikhutshwe ziye emoyeni phantsi kweemeko ezilawulwayo nangemida evumelekileyo.

ILTO ayiyi kuzandisa iirhasi ezineradiyeyishini ezikhutshwayo kuba umthombo oyintloko ngamafutha enyukliya, kwaye ukuthembeka kweetyhubhu zamafutha kuye kwaphucuka ngokuhamba kwexesha, kwabangela ukuba zinciphe iirhasi ezineradiyeyishini eziphumela

YEKAWONKE-WONKE

kwisekethi eyintloko. Ukuphucula okwensiwe ekuthembekeni kweetyhubhu zamafutha kubangelwe kukuphuculwa koyilo lwazo naziinkqubo zokuzivelisa.

Ulawulo lwamanzi angcoliswe yiradiyeyishini ekhutshwayo

I-radioactivity ekwisekethe eyintloko ngomnye wemithombo ephambili wamanzi angcoliswe yiradiyeyishini achithwayo. Omnye umthombo ongundoqo weradiyeyishini ngamanzi akwisekethi eyintloko apholisa iriyektha. Amanzi angcoliswe yiradiyeyishini akhutshwayo alawulwa ziinkqubo noosinga-nkqubo bemichiza echithwayo. Umgama neentlobo zokusetyenzwa zixhomekeka kulwakhiwo lwemichiza neyee-radionuclide kulo michiza ichithwayo. Ukusetyenzwa ngakumbi kwamanzi angcoliswe yiradiyeyishini achithwayo kunganciphisa iradiyeyishini ephumayo, kodwa le nkqubo inemida eyisikelweyo, kuba ezinye ii-radionuclide ezifana ne-tritium azahluleki noba sekutheni. Ngamanye amaxesha kufuneka uthenge emithiyo ngenethole kule meko ngokuthi usebenzise umgaqo weALARA.

Uyilo neyona meko bukuyo ubuxhakaxhaka boomatshini bokucoca imichiza eneradiyeyishini elahlwayo ziye zahlolwa kwiPSR. I-PSR ifumanise ukuba uyilo lobuxhakaxhaka boomatshini bokucoca imichiza eneradiyeyishini elahlwayo lukumgangatho owamkelekileyo ngexesha iLTO. Kodwa ke ukquhubeka kuphuculwa kuza kuqwalaselwa kwiinkqubo zokulawula inkcitho eneradiyeyishini elahlwayo njengenxalenyne yokuquhubeka kweKoeberg inciphisa inkcitho eneradiyeyishini ekhutshelwa kokusingqongileyo.

10.3.3 Ifuthe kokusingqongileyo ngenxa yomsebenzi omkhulu wokutshintsha nokuphuculwa kobuxhakaxhaka boomatshini besitishi kusenzelwa iLTO

Njengokuba sekutshiwo, iKoeberg iye yazibophelela kwaye iza kuquhubeka izibophelela kumsebenzi omkhulu wokuhlaziya ukuze kuqinisekiswe ukuba iKoeberg ikwimeko entle kwaye iza kuquhubeka isebeza ngendlela ekhuselkileyo nethembekileyo ebuden'i bayo yonke iLTO, ukuba iNNR iyayigunyazisa.

Ilikhomponenti ezitshintshwayo (ezinjengeenjini zomphunga) kungenzeka ukwakheka kwazo kwahluke kwiikhomponenti ebezikhoo kuqala, nto leyo engadala ukuba kubekho utshintsho kwimveliso ezineradiyeyishini ezifumaneka kwinkcitho eneradiyeyishini. Ukwanda okwexeshana komthamo wenkcitho eneradiyeyishini, ubukhulu becalo ebuden'i besigaba sokufakela, nako kungenzeka. Iprojekthi (Uluhlu lwemisebenzi eyenziwayo xa kutshintsha ikhomponenti) nganye yolu hlobo iyayiqwalasela le nto ukuze iqiniseke ukuba incinci inkcitho eneradiyeyishini echithwayo nokuba ifuthe kwi-AADQ liyaqondwa kwaye liginwa lingaphantsi kwemida.

Ukuchanabeka kwemathiriiali yeenjini zokwenza umphunga ezintsha kwisekethi yamanzi apholisa iriyektha okwexeshana kuza kubangela ukuba amanzi esekethi eyintloko apholisa iriyektha abe neradiyeyishini ephezulu. Eli futhe liye lahlolwa, yaye kugqitywe ekubeni ukwanda kwenkcitho engamanzi aneradiyeyishini echithwayo kuncinci kwaye

YEKAWONKE-WONKE

kusengaphantsi kakhulu kwii-AADQ. Ifuthe ledowusi yoluntu nalo lafunyaniswa liluncinane kwaye lingaphantsi kakhulu kwimida yolawulo ebekiwego.

Ukutshintshwa kweekhomponenti ezinkulu kungaphumela ekubeni kufuneke iindawo ezinkulu zokubeka izinto kanye nezakhiwo ezintsha zokugcina izixhobo zokusebenza okanye zokuzivelisa. Kungenzeka kufuneke ii-crane ezinkulu. Yonke le misebenzi iyahlolwa ukuze kubonwe ifuthe engaba nalo kokusingqongileyo. Ukuza kuthi ga ngoku, iiprojekthi ezimbini ezinjalo ziye zafuna ukuba kucelwe isigunyaziso sokusingqongileyo ngokoMthetho Welizwe Wolawulo Lokusingqongileyo 108 wango-1998. Iprojekthi yokuqala kukwandiswa kwendawo yokumisa iimoto ukuze kulungiselelw abasebenzi abaninzi abaza kube besebenza kwiiprojekthi zokutshintsha iikhomponenti, ize enye iprojekthi kwaye kukutshintshwa kweyadi yombane onamandla kakhulu engekaqalwa. Ukwandiswa kwendawo yokupaka iimoto akunafuthe kokusingqongileyo, kwaye akuyomfuneko ukucela isigunyaziso kwiNNR.

10.3.4 Ifuthe kokusingqongileyo ngenxa yokuguga kobuxhakaxhka boomatshini neekhomponenti

KwiLTO, kujoliswa ngamandla ekulawuleni imiphumela emibi yokuguga kobuxhakaxhka beematshini neekhomponenti zesitishii. Ubuxhakaxhaka beematshini neekhomponenti zesitishii ezisetyenziselwa ukucoca inkcitho engamanzi aneradiyeyishini nokuyichitha zihloliwe kwiPSR. Ezona khomponenti zesitishii ezingachaphazela okusingqongileyo ngenxa yokuguga zii-evaporators zobuxhakaxhaka boomatshini bokucoca kwenkcitho engamanzi aneradiyeyishini achithwayo kanye nezakhiwo, apho izakhiwo zingumqobo phakathi kwemathiriyali eneradiyeyishini nokusingqongileyo.

Ezi evaporators azisebenzi kakuhle, kodwa obubuxhakaxhaka boomatshini obukhoyo busaqhubeka busebenza ngokwaneleyo kuba ii-deminalisers ezigudle lo mjelo ziyancedisa koku kuqhawalela kwee-evaporators. IPSR icebe ukuthatha amanyathelo ukuze kuphuculwe ukusebenza kwee-evaporators.

Izakhiwo ziye ziguge ngokuhamba kwexesha, ngokukodwa xa zichanabeke (exposed) kokusingqongileyo okuqatha. Ukuncitshisa kwefuthe ngokubeka esweni imeko yezakhiwo nangokulungisa qho kuyenziwa ukuze kungafane kwenzeke ukuba kubekho inkcitho eneradiyeyishini echithwayo ephumela kokusingqongileyo ngezakhiwo engacwangciswa.

10.3.5 I-radioactivity kokusingqongileyo ngenxa yeLTO

Ukuqokelelana kwe-radioactivity kwizinto eziphilayo kwaziwa ngokuba yi-bioaccumulation. Ezinye ii-radionuclides (iikhemikhali ezineradiyeyishini) ezikhutshelwa kokusingqongileyo zineempawu ezibangela ukuba i-bioaccumulation ibephezulu kunezinye (ukuqokelelana kwekhemikhali kwizinto eziphilayo). Isiqingatha sobomi se-radionuclide (ixesha elifunekayo ukuze iiathomu ezineradiyeyishini ziphelelw ngamandla enyukliya) kanye nesiqingatha sobomi emzimbeni (ixesha elithathwa sisiqingatha se-radionuclide ukuba ikhutshwe kwisidalwa) zizinto

YEKAWONKE-WONKE

ekubalulekileyo ukuziqwalasela xa kucingwa ngefuthe kokusingqongileyo. Inkqubo yokubeka esweni okusingqongileyo ikhona, ijonga ubungakanani bee-radionuclide kwiisampulu ezithathwe kokusingqongileyo kwisizai saseKoeberg (jonga icandelo 10.3.7).

Njengoko kuchaziwe ngasentla, ukuqokelelana kwenzeka kokusingqongileyo ngenxa yokuba ezinye iiradionuclide zinesiqingatha sobomi obude. Ukuqaphela ukuphelelwa ngamandla kweradiyeyishini, ulungelewaniso lweradioactivity kokusingqongileyo lwenzeka ngaphambili kweminyaka eyi-40 yokusebenza kwee-radionuclide ezinesiqingatha sobomi esingaphantsi kweminyaka eyi-10. Akukho okunye ukuqokelelana kwe-radioactivity okubangelwa yi-bioaccumulation ebudeni belTO kwezi nuclides zinesiqingatha sobomi esifutshane.

Ii-radionuclides ezinesiqingatha sobomi eside kuneminyaka eyi-10 nesineempawu ezidala i-bioaccumulation ephezulu zingadala umngcipheko kokusingqongileyo ngenxa yeLTO. Ezi yi-carbon-14 (isiqingatha sobomi bayo yiminyaka eyi-5 730), i-strontium-90 (isiqingatha sobomi bayo yiminyaka eyi-29), i-caesium-137 (isiqingatha sobomi bayo yiminyaka eyi-30), ne-nickel-63 (isiqingatha sobomi bayo yiminyaka eyi-96). Nangona kunjalo, xa kukuqwalaselwa ngokuqokolelana kwe-radioactivity okuqikelelwayo kokusingqongileyo kwaselwandle, kukho ukwanda okuncinci ekuqokelelekeni okulindelekileyo ngenxa yeLTO kwezinye ii-nuclides ezibalulekileyo kunezinye ezihlala ixesha elide, njengoko kuboniswe kwiTheyibhuli 4. Ifuthe loku kuqokolelana kwisityalo nakwisilwanyana sembekiselo lifunyaniswe liluncinane.

Itheyibhuli 4: Ukwanda okuqikelelwayo kwe-radioactivity kokusingqongile kwaselwandle xa kusetyenzwa iminyaka eyi-60 xa kuthelekiswa neyi-40 kwiinuclides ezibalulekileyo ezinesiqingatha sobomi eside.

| I-radionuclide | Ukwanda kwepesenti kwintlabathi yowlandle | Ukwanda kwepesenti kwii-crustacean nakwiintlanzi | Ukwanda kwepesenti kukhula lwaselwandle | Ukwanda kwepesenti kwii-mollusc |
|----------------|---|--|---|---------------------------------|
| C-14 | 1,2 | 0,0 | 0,0 | 0,0 |
| Cs-137 | 2,3 | 0,0 | 0,0 | 0,0 |
| Ni-63 | 5,8 | 0,3 | 0,1 | 0,0 |
| Sr-90 | 1,3 | 0,0 | 0,0 | 0,0 |

Ithamo elilindeleke kuluntu libalwe kuqwalaselwa uqokolelwano lweenuclides kokusingqongileyo ukuya kutsho kwiminyaka eyi-60 yeLTO. Ngokwahlukileyo kwidowusi yoluntu ebalwa emva kwexesha, esekelwe kwisampulu zoqobo nakumanani emichiza echithiwego, idowusi yoluntu elindelekileyo isekelwe kuqikelelo, ngokomzekelo, inkcitho engamanzi aneradiyeyishini ezakukhutshwa kwixesha elizayo. Idowusi elindelekileyo kwiLTO iqikelelwe kucingelwa eyona meko imbi lwaba yi-0,094 mSv ngonyaka, engaphantsi kwedowusi yesithintelo eyi-0,25 mSv ngonyaka.

YEKAWONKE-WONKE

Inkqubo yokubeka esweni iradiyeyishini kokusingqongileyo ijonga ubuninzi bee-radionuclide kwiisampulu zokusingqongileyo ize ilandele nakuphi na ukuqokolelana okubalulekileyo kokusingqongileyo kumsebenzi oqhelekileyo. Inkqubo yokubeka esweni iradiyeyishini iza kulubona utshintsho oluphawulekayo kwimikhwa ye-bioaccumulation ebudenii bexesha leLTO xa lunokwenzeka.

Kwensiwe uphononongo ukuze kuggithwe ngefuthe ledowusi kwizityalo nezilwanyana. Ifuthe ledowusi ngenxa yokuqokolelana kwee-radionuclide iminyaka eyi-60 kuye kwahlolwa. Uhlolo lubonise ukuba idowusi kwisilwanyana nakvisityalo sembekiselo ingaphantsi kwenani ledowusi lokuhluza eliyi-40/400 $\mu\text{Gy/h}$ yelAEA neKomiti Ekhethekileyo Yezizwe Ezimanyeneyo Ejongene Nemiphumela Yeradiyeyishini Yeeathom (The United Nations special committee on the effects of atomic radiation [UNSCEAR]).

10.3.6 Ifuthe leLTO ekusetyenzisweni komhlaba ojikeleze iKoeberg

Inkqubo yokubeka esweni okusingqongileyo eKoeberg iyasetyenziswa ukuze kubekwe esweni zonke iindlela zokuchanabeka ezibalulekileyo. Ezi ndlela zingatshintsha ngamaxeshwa athile kuxhomekeka ekutshintsheni kwemisebenzi eyenziwa ngabantu kufutshane nesi sitishi sombane naxa kwensiwe utshintsho olubalulekileyo kwesi sitishi. Ngokuhambisana noko kufunwa yimiyelelo, ukuhluwa kwendlela osetyenziswa ngayo umhlaba okwisithuba seekhilomitha eyi-10 ukusuka kwesi sitishi sombane qho ngonyaka kuyenziwa. Injongo yolu phononongo lomhlaba kukukhangela iindlela ezintsha osetyenziswa ngazo, utshintsho kwiindawo ezikuzo ii-receptors, okanye iindlela ezintsha zochanabeko.

Iziphumo zePSR (ngo- 2009 ukuya 2019) zibonise ukuba akubangakho imithombo okanye iindlela ezintsha ezibalaseleyo ezifuna ukuba kuhlolle isampulu yendawo. Umsebenzi wezolimo kufutshane nesi sitishi sombane awutshintshanga ngenxa yomgangatho ophantsi womhlaba ojikeleze esi sitishi sombane nemiqathango ethintela uphuhliso ebekwe kwisicwangciso yemeko yongxamiseko.

Amathuba okwakha indawo yokuhluza ityuwa emanzini olwandle kufutshane neKoeberg ahlooliwe kwaza akwafunyanwa tshintsho ekusetyenzisweni komhlaba oluchatshazelwa yidowusi yoluntu.

Naluphi na utshintsho olungenzeka luza kubonwa ebudenii bohlolo lonyaka yaye ifuthe lalo liza kuhlolle ngelo xesa. Kodwa ke, akulindelekanga ukuba kwenzeke izinto ezintsha ebudenii bexesha leLTO ezingeza neendlela ezintsha zokuchanabeka.

10.3.7 Inkqubo yokubeka esweni okusingqongileyo

iKoeberg inenkqubo yokubeka esweni okusingqongileyo ukuze kuhlolle imiphumo yeradiyeyishini ebangelwa yinkcitho eneradiyeyishini ekhutshelwa kokusingqongileyo. Le nkqubo yanelisa imiqathango esekwe yiNNR kwakunye naleyo isekwe yi-IAEA. lisampulu

YEKAWONKE-WONKE

ezithathwe yilabhoratri yophononongo lokusingqongileyo eKoeberg ziQuka iindlela zokuchanabeka ngokusezelu, ukuginya, nangokungqalileyo. lisampulu ezithathwe kwiindawo ezahlukeneyo nangamaxeshu angafaniyo ziQuka ezi zinto zilandelayo:

- Umoya
- Amanzi okusela
- Umphezulu wamanzi
- Ubisi
- lntlanzi
- Umhlaba
- Intlabathi ephantsi elwandle
- Imifuno enamaggabi abanzi
- Ukutya okuveliswa kulo mmandla
- Amanani eradiyeyishini kusetyenziswa iidosimitha ze-thermo-luminescent

Ingxelo yeziphumo zeesampulu inikelwa kwiNNR ngekota nangonyaka. Iziphumo zazo zonke iisampulu ezithathwe kwixesha lengxelo yePSR yokugqibela (2009 ukuya ku 2019), nezibangelwa umsebenzi owenziwa eKoeberg, bezingaphantsi kwe-10% yamanqanaba afanele axelwe kwaye akukho nkxalabo kokusingqongileyo okanye kuluntu.

Inkubo yokubeka esweni okusingqongileyo ijonga ubuninzi bee-radionuclides kwiisampulu zokusingqongileyo yaye iza kuqhubeka ikhangela nakuphi na ukuqokolelana okubalulekileyo kokusingqongileyo ebudeni bexesha leLTO.

11. IZIZATHU ZOBUGCISA EZIXHASA UKWANDISWA KWEXESHA LOKUSEBENZISA ESI SITISHI

Esi sahluko shishwankathela ukuxhaswa kweLTO ngobugcisa. Sichaza iziphumo ezingundoqo zobugcisa ezivela kuhlolo, sijolisa kulawulo IweSALTO lokuguga neziphumo zePSR. Ukongezelela koku, ukhuseleko lokoqobo nolweekhompyutha luza kushukuxwa kancinane ngenxa yokuba ingumbandela onkenenkene lo. Imingcipheko yokhuseleko Iwenyukliya, lwempilo, neyokusingqongileyo ishukuxwa kwiSahluko 10 aze amalungiselelo enkampani eLTO achazwe kwiSahluko 12.

11.1 Uyilo IweKoeberg

Uyilo IwaseKoeberg luyafana neyezinye iiyunithi zeeriiektha zenyukliya ezisehlabathini jikelele, ngokukodwa ezaseFransi. Yinxalenye yeqela leeriiektha zamanzi axinzelelwego ezivelisa i-900 MW, nezinamacandelo amathathu ezakhiwa nguFramatome kwiminyaka yoo-1970 noo-1980 ngokukodwa eFransi nezibhexeshwa yinkampani ephehla umbane yamaFrentshi, iÉlectricité de France (EDF). Zinembali yokusebenza ngendlela enokuthenjwa, nekhuselekileyo. Uyilo Iwesitishi saseKoeberg luye Iwahlolwa ebudeni

YEKAWONKE-WONKE

bePSR ukuze kubonwe ukuba iisistimu zesi sitishi, izakhiwo, neekhomponenti ezibalulekileyo ekusebenzeni ngendlela ekhuselekileyo ziylwe ngendlela efanelekileyo xa kuthelekiswa nemigangatho yangoku yeentlobo ngeentlobo zoilo ukuze kuthintele yaye kuncitshiswe iziganeko ezingabeka esichengen iukhuseleko. Lilonke, kufunyaniswe ukuba uyilo IweKoeberg olukhoyo Iwanele xa luhlolwa luthelekiswa nesiseko selayisenisi nemigangatho yelizwe neyamazwe ngamazwe. Isiseko selayisenisi liqela lamaxwebhu, iinkqubo ezilandelwayo, nemiqathango emele ithotyelwe ye-NIL-01 ekhutshwe yiNNR.

Uyilo Iwesitishi saseKoeberg luye Iwaphuculwa ngokuhamba kweminyaka ngokuthi kucingelwe iteknoloji ephuculwego, amava okusebenza eli lizwe nawamazwe ngamazwe (izinto ezifundiweyo), kunye nemigangatho yakutshanje yokhuseleko. Utshintsho olwenzelwe ukuphucula ukhuseleko nokuthembeka kweKoeberg luquka ukutshintsha iitanki ezigcina amanzi okutshintsha amafutha, ukutshintsha iintloko zemiphanda weeriyeektha (reactor vessel heads), ukutshintsha isistimu yokhuseleko nesistimu yolawulo Iwe-turbine, ukutshintsha isistimu ye-reactivity control rod, ukuphuculwa kwesistimu yokubeka esweni i-radioactivity, ukuphuculwa kwesistimu yokupholisa yedama lamafutha asetyenzisiweyo, nezinye ezinanzi. Siceba ukwenza nolunye utshintsho, njengokutshintsha injini yomphunga.

Emva kwengozi eyenzeke eFukushima eJapan ngo-2011, iKoeberg yenze uhlolo lokhuseleko ngokokuyalelw yiNNR. Uhlolo lokhuseleko belujoliswe kwiziganeko eziqatha ezenzeka ngaphandle (ezifana neenyikima neetsunami) ezinokuchaphazela kakhulu ukusebenza ngendlela ekhuselekileyo kunye nokulungela nokusabela kwimeko yongxamiseko. Kufunyenwe izinto eziliqela ezifuna ukutshintshwa nokuphuculwa ukuze kwensiwe izinto ezifundwe kwingoz yaseFukushima. IKoeberg sele iyiphucule intsabelo kwiziganeko eziqatha ezenzeka ngaphandle, ngokuba nemithombo ehambayo engakumbi yombane neminye imithombo yamanzi okupholisa kwidama lamafutha asetyenzisiweyo. Siceba ukuphucula nezinye izinto ukuze senze izinto esizibophelele ngazo kwiNNR.

Umgangatho ophezulu wokhuseleko uyafikelelwa ngenxa yemiqobo emithathu eseKoeberg evalela imathiriyali eneradiyeyishini. Umqobo wokuqala ziityhubhu zamafutha enyukliya ezenziwe ngeemathiriyali zodidi oluphezulu ukuze zimelane namaqondo obushushu noxinzelelo oluphezulu. Umqobo wesibini yisistimu yokupholisa iriyektha eyilwe ngohlobo lokuba idlulisele ubushushu obuvela kumafutha enyukliya kwiisistimu zezibini eziqhube ii-turbine. Isistimu yokupholisa iriyektha iyakwazi ukulawula ubushushu, uxinzelelo, nentsabelo yenyukliya. Umqobo wesithathu sisakhiwo esigqumileyo, ekuhlala kuso isistimu yokupholisa iriyektha. Siyilwe saza sakhiwa sanenwebu yentsimbi nomaleko ongaphandle wekhonkrithi oqiniswe ngeentsimbi.

Umda wokhuseleko ungachazwa njengomnyinge ekungadlulwa ngawo kumda oqhelekileyo wokusebenza ngaphambi kokuba kubekho ukusilela. Izitishi zombane wenyukliya ezifana neKoeberg ziylwe zanemida ebanzi yokusilela ukuze kuncitshiswe umngcipheko okanye ubuqatha bengozi yenyukliya. Imida yokhuseleko ifunyanwa ngokusebenzisa iimathiriyali

YEKAWONKE-WONKE

eziqinisekisiwego neekhowudi zoyilo, ngokuvavanya iikhomponenti, nangokwenza uqikelelo oluqhotyoshiwego. Uyilo lweesistimu zokhuseleko IwaseKoeberg luuhlangabezana nokusilela okungenzeka kwekhomponenti yesitishi ebalulekileyo kukhuseleko ngaphandle kokuphumela ekubeni isistimu eyenzelwe ukhuseleko ilahleke (nto leyo eyaziwa ngokuba kukusilela kwento enye).

Uyilo IwaseKoeberg luuhlangabezana nophinda-phindo (redundancy) kunye nokwahluka kwestimu zokhuseleko ngokuqqua uphindo-kabini (duplicate) oluzimeleyo lwestimu nganye eyaziwa ngokuba nguTrain A noTrain B kwiyunithi nganye (uphinda-phindo). Kuneesistimu zemeko kaxakeka eziyilwe ngendlela eyahlukileyo njengeesistimu ezifaka amanzi eziqhutywa ziinjini ezisebenza ngombane kunye neesistimu ezifaka amanzi eziqhutywa yi-turbine yomphunga (ukwahluka). Ukwahluka kukhusela ekusileleni kwazo zonke iisistimu kuba zifana.

I-PSR igqibe ekubeni uyilo lwei sitishi lusekelwe kwimigaqo yokhuseleko ebanzi ubukhulu becalo ehambisana noqheliselo olululo nolusebenzayo. Izakhiwo, iinkqubo, namanyathelo alandelwayo ukuze kuyilwe isitishi aggalwa njengangqingqwa ngokwaneleyo ukuze kugcinwe ukuthembeka ngokuqhubekayo kwesi sitishi ukuze kuxhaswe ukuqhubeka kweKoeberg iseberenza ngendlela ekhuselekileyo.

11.2 Eyona meko zikuyo iisistimu, izakhiwo neekhomponenti

Eyona meko zikuyo iiSSC ezibalulekileyo kukhuseleko iye yahlolwa kwiPSR ukuze kuboniswe ukuba siyathotyelwa isiseko selayisenisi ekhoyo, kuthelekiswe uqheliselo IwaseKoeberg nemigangatho yakutshanje nezhokelo zamazwe ngamazwe ngokuphathelele imisebenzi eyenziwa esitishini ebandakanya ukulawulwa kokuguga kweeSSC, kuze kuhlolwe ukusebenza nokuthembeka ebudenibeiLTO. I-PSR ifikelele kwezi zigqibo zilandelayo:

- Imigangatho noqheliselo olukhoyo lokhuseleko ngokuphathelele kwimeko yeeSSC, ukulungiswa, ukujongwa, ukuhlolwa kwazo noxa zisebenza, nokuvavanya zihambisana neekhowudi zokhuseleko, imigangatho, noqheliselo lwelizwe nolwamazwe ngamazwe.
- linkqubo zokulawula ukuguga (iinkqubo zokulungisa, zokujonga, zokuhlola noxa zisebenza nezokuvavanya, njalo njalo.) zigubungela yonke into kwaye ziphunyezwakakuhle, nto leyo eqinisekisa ukuba imisebenzi yeeSSC efunekayo yokhuseleko nebalulekileyo kukhuseleko ingenziwa ebudenibeiLTO. Nangona kuphawulwe ukuba kukhona ukwanda kokusilela kweekhomponenti ngenxa yemiphumo yokuguga neyokuphelelwa, azikho iiSSC ezibalulekileyo kukhuseleko ezifuna ukuqwalaselwa ngokungqalileyo xa kuthelekiswa nokusilela okwenzeka kumazwe ngamazwe, kwaye ukusilela kuye kwasingathwa kakuhle yinkqubo yokulawula ukuguga.

YEKAWONKE-WONKE

- Yonke imisebenzi yokulungisa, yokujonga, yokuhlola, yokuvalanya, neyokulinganisa yenziwa kakuhle kunamatelwa ngokungqongqo kwiinkqubo, kumanyathelo ame alandelwe, nakuludwe lweenkqubo ezicetyiweyo. Xa imisebenzi ekuludwe lwenkqubo ingenziwa ngenxa yokungabikho kwee-spares okanye ukuphelelwa kwazo, kuye kwenziwa iindlela ezizezinye kwabekwa nezizathu zazo ukuze kuqinisekiswe ukuba ukhuseleko lwenyukliya aluchaphazeleki.
- Uphononongo lweengxelo ezikhoyo kungqine ukuba yonke inkcazel ebbaliwego iphelele kwaye iyichaza ngendlela echanileyo eyona meko yeeSSC ezibalulekileyo kukhuseleko.
- Kujoliswe ngokukhethetkileyo kwiikhkomponenti nakwizakhiwo ezinkulu ezingayi kutshintshwa ngeLTO ngokusekelwe kuhlolo, ekujongeni, kumava omsebenzi, nasekulungisweni ezinjengee-pressure vessel zeriyeektha (iiRPV), izakhiwo ezigqumayo, izixhasi zonyikimo ezenziwe ngerabha (aseismic bearings), iibodi zamaqhosha, neentambo zombane. linkcukacha ezingakumbi ngezi khomponenti zichazwe ngezantsi.
 - I-RPV iye yafakwa yonke kwinkqubo yokuhlola kwaza kwaqhutywa uhlalutyo lobunjineli ngumvelisi wokuqala wezi zixhobo. Uhlalutyo lubonise ukuba iRPV iyifanele injongo yayo ngalo lonke ixesha leLTO. Ukuhlolwa nokubekwa esweni kweRPV kuza kuqhubeka ebuden bayo yonke iLTO ngokuhambisana noko kufunwa yimiylelo.
 - Izakhiwo zokugquma zihlolwa zize zilungiswe ngokuqhubekeyo. Kutshanje, uvavanyo oludityanisiweyo olujonga umkhamo wokuvuza olwenziwa qho kwiminyaka eyi-10 noluqhutywe ngo-2015 lungqinile ukuba akukho kuvuza kwaye izakhiwo zokugquma ziseluqilima. Uhlalutyo lobunjineli lubonisa ukuba izakhiwo ziza kuqhubeka ziluqilima ebuden balo lonke ixesha leLTO. Ukulungiswa nokutshintshwa ngokuqhubekeyo okufana nokwe-impressed current cathodic protection (ICCP) kuza kuqinisekisa ukuba esi sakhiwo sihlala ixesha elide kuze kunciphisa ubuqatha bokusinqongileyo kwaselwandle.

YEKAWONKE-WONKE

- Izakhiwo zesiqithi senyukliya zixhaswa zizixhasi zonyikimo ezenziwe ngerabha, ezenza iKoeberg ikwazi ukumelana nokunyikima komhlaba ngokunciphisa amandla okudlikidleka kvezakhiwo okubangelwa ziinyikima. Ezi zizixhasi zonyikimo ezenziwe ngerabha zijongwa yinkqubo yokubeka esweni equka yonke into ukuze kujongwe iimpawu zokuguga. Ukujongwa kweempawu zezixhasi zonyikimo ezenziwe ngerabha kuyaqhutywa sitethanje ukuze kuqinisekiswe ukuba ezi zixhasi zonyikimo zenziwe ngerabha zihlala ziwfanele umsebenzi wazo kwaye zikulungele ukwandiswa kwexesha lokusetyenziswa kwesitishi. Ukubeka esweni nokuhlolola izixhasi zonyikimo ezenziwe ngerabha kuza kuqhutywa ebudenil balo lonke ixesha leLTO.
- Ukutshintshwa kweebhodi zamaqhosha akulindelekanga ngenxa yokuthembeka kwazo ngoku nokufumaneka kwee-spare parts zazo. Uvavanyo oluqhutywayo ngamaxesh a thile lweebhodi zamaqhosha lusenza sizithembe ezi bhodi zamaqhosha ukuba ziza kusebenziseka ngexesha leLTO.
- Akulindelekanga ukuba zitshintshwe kakhlulu iintambo zombane kwiLTO ngenxa yokuthembeka kwazo ngoku, imeko yazo, namava afunyenwe kwizitishi zombane. Ezinye iintambo zombane ezifunekayo ukuze kusetyenzwe ebudenibemeko eziqatha ziza kuphinda zenziwe zifaneleke ngokuphinda zivavanywe kwaye zihlalutywe ukuze kuqinisekiswe ukuba zingakwazi ukusebenza lonke ixesha leLTO.
- Njengoko bekutshiwo ngaphambili kolu xwebhu, kucetywa ukutshintsha iinjini zomphunga. linjini zomphunga ezindala zithanda ukuguga ngokuthi kuchachambe iityhubhu. Le nto ilawulwa ngokuthi zihlolwe kwaye kungcitywe ezo tyhubhu. Kodwa ke, ukuze kuqinisekiswe ukuba ukhuseleko nokuthembeka kuqhubeaka kukho lonke ixesha leLTO, kufakwa iinjini zomphunga ezintsha ezingayi kuba naso esi siphako.
- Uphononongo lwePSR lugqibe ekubeni akukho zithintelo zinkulu kwiLTO ezidibene noyilo lwasitishi okanye ne meko ezikuyo iiSSC ezibalulekileyo kukhuseleko, ukuba nje ziza kulungiswa kwangetuba izinto eziboniwego ezitenxileyo ngokuhambisana neSicwangciso Sokuphumeza Esityanisiwego SePSR.

11.3 Uhlolo Lolawulo Lokuguga LweSALTO

Uqheliselo neenkqubo ezisebenzayo zokulawula ukuguga zingayithintela imiphumo embi ingachaphazeli ukuthembeka kweeSSC ebudenibexesha leLTO. Uhlolo lolawulo lokuguga lweSALTO lwenziwe liqela leengcali zeli lizwe nezamazwe ngamazwe. Belujoliswe ekuboneni ukuphelela koqheliselo neenkqubo zokulawula ukuguga ezikhoyo eKoeberg

YEKAWONKE-WONKE

kusetyenziswa izinto ezifunwa kukhuseleko kumazwe ngamazwe, kweli lizwe, nakwimiylelo.

Uhlolo nomlinganiselo wemiphumo emibi yokuguga zixhomekeka kwizinto ezifana noyilo, imeko yemathiriyali, ukwakhiwa, indlela yokusebenza, nokusingqongileyo osebenza kuko loo matshini. Ukuqonda ngokupheleleyo indlela iiSSC eziguga ngayo ngokuhamba kwexesha nefuthe lokuguga ekuthembekeni kweeSSC ukuba zenze umsebenzi wazo kubalulekile ukuze kupuhliswe inkubo yokulawula ukuguga elungeleleneyo. Ngoko, ukuhlolwa kokulawulwa kokuguga kuqala ngokufumana zonke iisistimu, izakhiwo, neekhomponenti zesitishi ezibalulekileyo kukhuseleko lwenyukliya (ezinjengee-pressure vessels zeriyektha, iikhomponenti zesistimu eyintloko, nemibhobho yoxinzelelo oluphezulu). Inggalelo ekhethekileyo inikelwa kwizakhiwo neekhomponenti ekunzima ukuzitshintsha; uyilo, eyona meko zikuyo, neenkubo zazo zokulawula ukuguga ziqaqinisekiswa ukuze kuqinisekiswe ukuba zisebenza ngendlela enokuthenjwa lonke ixesha leLTO.

Uvimba wenkcazel wawo onke amava okusebenza aphantelele ukuguga kwezihobo zesitishi senyukliya, ezifana nezihobo ezisetyenziswa eKoeberg, uyafumaneka kwaye angasetyenziswa kune namava eKoeberg ngokwayo aphantelele ukuguga kwezihobo. Lo vimba wenkcazel ofumaneka kwiKoeberg omalunga nokuguga kwezihobo ufunyenwe kumava aphantelele ukuguga e-EDF nakwiIAEA International Generic Ageing Lessons Learned (IGALL). Unikela ngenkcazel eninzi ngoqheliselo olungqinwe lusebenza lokulawula ukuguga nangokulungela iLTO. Ngoko izinto ezidibene nokuguga zaziwa kakuhle kwaye ziqaqondwa. Le nkcazel isetyenziswa kwiinkubo nakwiinkubo zokuguga ezisetyenziswa eKoeberg ukuze izinto ezidibene nokuguga zibonwe, zithintelwe, zibhangiswe, okanye zilawule ngokuqhube ka zibekwe esweni.

Isikhokelo esilawula uLawulo Lokuguga Nokwandisa Kwexesha Lokusebenza Kwezitishi Zokuphehla Umbane Wenyukliya [12] sichaza ekufuneka kwenziwe ukuze kuqinisekiswa ukuba iinkubo zokulawula ukuguga ziyasebenza. Izinto ezenziwayo ukuze kulawulwe ukuguga eKoeberg zihambisana nezinto sisikhokelo esilawulayo [12] kwaye ziqluka ezi zinto zilandelayo:

- Ukuhlola ukwanelu nokusebenza kweenkubo zokulawula ukuguga zaseKoeberg zithelekiswa neempawu ezingqalileyo ezichazwe ku- [12]
- Utthelekiso lweenkubo zokulawula ukuguga novimba wolwazi okwi-IAEA IGALL osebenzayo
- Ukukhangelwa kweeSSC ezinexesha elifutshane lokusebenza nokuqinisekiswa kwexesha lazo eliseleyo ukuze kusetyenzwe ngendlela ekhuselekileyo. Olu luhlalutyo lokhuseleko oluqikelelayo ngokusekelwe kwixesha okanye kubude bexesha zisebenza kwaye lubizwa ngokuba luhlalutyo lokuguga olusikelwe ixesha (time-limited ageing analysis [iiTLAA]).

YEKAWONKE-WONKE

- Ukuhlolwa kokuzinza kweenkqubo zenkqubo yokulawula ukuguga ezinjengeenkqubo zokuthembeka kwezixhobo, uvimba wenkcazeloyokulawula ukuguga, inkqubo yokuphelelwa kweteknoloji, njalo njalo.
- Ukuhlolwa kokufaneleka kweenkqubo zokutshintsha isitishi ezifunekayo ukuze kuhlolwe imiphumo yokuguga njengokuhlola ukuba iikhomponenti ekutshintshwa ngazo zingakwazi ukumelana nemiphumo yokuguga, ukuphelelwa, neenkqubo zokulawula ukuguga.
- Ukufumana nokuphumeza amanyathelo okuphucula ngexesha elililo elibekiwego ukuze kulungiswe izinto ezifunyaniswe ebudenibohlolo IweSALTO

IKoeberg igqibile ukuhlola ulawulo lokuguga, yaye iziphumo zingqine ukuba iLTO ingaxhaswa. Ukuphuculwa kweenkqubo, uvavanyo, nokubeka esweni kolawulo lokuguga IweeSSC kuza kuqhubeka ngaphambi kweLTO nasebudenibayo yonke iLTO ukuze kuqinisekiswe ukuba kusetyenzwa ngendlela ekhuselekileyo nenokuthenjwa. Le misebenzi iquka ukugqitywa kweeTLAA ezimbawea ziseleyo, ukujongwa kwezixhasi zonyikimo ezenziwe ngerabha, nokuvavanywa kweentambo zombane.

11.4 Uhlolo lokhuseleko Iwamaxhesha athile

Ilaisenisi yeNNR ifuna ukuba kwensiwe iPSPR qho emva kweminyaka eyi-10. Ijoliswe ekuhloeni nasekubekeni imilinganiselo ngokupheleleleyo uyilo, amaxwebhu, iisistimu zolawulo, iinkqubo ezsungulweyo, iinkqubo, namanyathelo alandelwayo kwesi sitishi sombane wenyukliya kuthelekiswa nemigangatho yokhuseleko ekhoyo elizweni nakumazwe ngamazwe kunye noqheliselo lokusebenza ukuze kubonwe ukhuseleko olupheleleleyo Iwesitishi sombane wenyukliya kwaye kuqinisekiswe ukuba sikhuselekile ukuba siqhubeke sisebenza. Esinye seziphumo zePSR kukubona uphuculokhuseleko olungenziwa ngaphambi kwePSR elandelayo ukuze kuqhutyekwe kuphuculwa ukhuseleko Iwesitishi sombane wenyukliya.

I-PSR yokuqala yaphumela ekusungulweni ngokubanzi kweenkqubo zolawulo zesitishi, uqheliselo lolawulo kunye nokuphunyezwa kotshintsho lokhuseleko Iwesitishi olwalwenzelwe ukuphucula ukhuseleko Iwenyukliya yesakhiwo ukuze kunyuswe umkhamo wokukhuselwa kukawonke-wonke nabasebenzi. Isiqqibo sePSR yokuqala sakholka ekubeniiNRR yamkele ingxelo yokuhlalutya ukhuseleko yokugqibela kuze kuphuculwe kakhulu ukhuseleko kuyilo IwaseKoeberg.

I-PSR yesibini yaseKoeberg ibijoliswe ekuthelekiseni iinkalo eziphambili zoilo Iwesi sitishi noqheliselo lokusebenza kunye nolwezitishi zombane ezifana nesi ezibhexeshwa yinkampani yombane yaseFransi, iEDF. Ngaphandle kokuphuculwa kokhuseleko Iwesitishi, ezinye iziphumo eziphambili zePSR beziquka ukwenziwa kophononongo olungakumbi lokhuseleko, ukuhlaziya ngokupheleleleyo koqheliselo lokulawula ukuguga kwesi sitishi

YEKAWONKE-WONKE

nemfuneko yokuhlola ngokutsha uphononongo lwasiza olwalusetyenziswe ekuqalen ukuze kuyilwe iKoeberg ngaphambi kokuba sakhiwe esi sitishi.

Emva kwengozi yaseFukushima eyenzeka eJapan, iKoeberg yahlola ngokutsha ukhuseleko ijolise kwiziganeko ezingaphandle eziqatha (njengeenyikima neetsunami) ezingaba nefuthe elibi ekusebenzeni ngokhuseleko nokulungela imeko yongxamiseko nentsabelo ukuze kuhlangatyezwane nezo ziganeko zinamathuba amancinci okwenzeka kodwa ezingaba nemiphumo emikhulu. Kuye kwaphuculwa izinto eziliqela ngenxa yolu hlolo, kwaye kusacetywa uphuculo olungakumbi.

I-PSR yesithathu eyenzelwe ukuxhasa iLTO ihbole izinto ezifunekayo ezingaphezu kwe-1 150 zithelekisa nezinto ejijongwayo kwimigangatho ekhoyo yelizwe neyamazwe ngamazwe. Le nto yensiwe kusetyenziswana neengcali zeli nezamazwe ngamazwe kuquka nenkxaso yobugcisa evela kwi-IAEA. Kufikelelwe kwezi zigqibo zibalulekileyo zilandelayo kwiPSR yesithathu:

- Uyilo olukhoyo ngoku kwesi sitishi lwanele xa luholwa luthelekisa nesiseko selayisenisi kunye nemigangatho yelizwe neyamazwe ngamazwe. linkqubo namanyathelo alandelwayo kuyilo lwesti sitishi zingqingqwa ngokwaneleyo ukuze zigcine ukuthembeka koyilo lwesti sitishi nokhuseleko.
- linkqubo ezidibene nokulungiswa kwemeko yeeSSC zanele kwaye ziphunyeza kakuhle. Eyona meko yeeSSC ezibalulekileyo kukhuseleko isenza sithembe ukuba ziza kuyenza imisebenzi yazo yokhuseleko de kufike iPSR elandelayo, kuquka neLTO.
- linkqubo zokufaneleka kwezixhobo zihambelana nemigangatho yamazwe ngamazwe kwaye ziza kukwazi ukuqinisekisa ukuba kukho izixhobo ezifanelekileyo ebudeni bayo yonke iLTO.
- linkqubo, neendlela zokulawula ukuguga ubukhulu becali ziyafikelewa, kwaye iLTO ingenziwa xa kunokuphuculwa izinto ezicetyisiwego.
- Uhlalutyo lokhuseleko kwiimeko ezingenakuphepheka lugqibe ekubeni akho amanyathelo aneleyo alungiselela izinto ezingemanga ngendlela ezichaphazela uhlalutyo lokhuseleko kwiimeko ezingenakuphepheka. Injongo yohlalutyo lokhuseleko kwiimeko ezingenakuphepheka kukungqina ukuba imisebenzi yokhuseleko ingawkazi ukwenziwa.
- Zisonke iziphumo zohlololokhuseleko kwizinto ezinokwenzeka zingaphantsi kwemida ebekwe yimiylelo echazwe kwi-RD-0024 (izinto ezifunekayo kuhlolo lomngcipheko nasekuthotyelweni kwezinto ezibalulekileyo ejijongwayo kukhuseleko) ukwenzela incopho neavareji yomngcipheko kuluntu.
- lingozi (ezangaphakathi nezangaphandle) ziqaqondwa, kwaye kukho iindlela zokuzinciphisa ezo ngozi.

YEKAWONKE-WONKE

- Indlela oluqhuba ngayo lalonke nje ukhuseleko lwenyukliya eKoeberg ikumgangatho owamkelekileyo.
- IKoeberg izifikelela ngokwaneleyo zonke izinto ezidityanisiwego ezifunekayo ezinento yokwenza nokusetyenziswa kwamava (izinto ezifundiwego) avela kwezinye izitishi nafunyaniswe kuphando. Uhlolisiso lugqibe ekubeni azikho iindawo ezingasingela phantsi ukhuseleko lwenyukliya okanye iLTO.
- Inkqubo yolawulo edityanisiwego ehambisana nemigangatho yamazwe ngamazwe iye yaphunyeza equka inkqubo epheleleyo yokuqinisekisa ngomgangatho ophezulu.
- Amanyathelo alandelwayo kulawulo nakwinqanaba lokusebenza ubukhulu becal a nexesha ekho kwaye ayasebenza. Yonke imiqathango yeNNR edibene namanyathelo alandelwayo iyalungiswa kuze kuhlangatyezwane nazo. Olu xwebhu luhlangabezana ngokupheleleyo nemigangatho yelAEA neyoMbutho Wabalawuli Benyukliya ENtshona Yurophu (Western European Nuclear Regulators Association [WENRA]).
- Inkqubo namanyathelo alandelwayo kwezabasebenzi zibhalwe kakuhle kwaye zihambelana nemigangatho yamazwe ngamazwe. Isicwangciso sabasebenzi sikho kwaye silungiselela ukuba kubekho abasebenzi abaneleyo ukuze kusetyenzwe ngokukhuselekileyo neLTO.
- Ucwangciso lwemeko yongxamiseko (emergency plan [EP]) namalungiselelo entsabelo zanele kwaye zibhalwe ngendlela efanelekileyo ukuze kuqinisekiswe ukuba kuyaqhutyekwa kusetyenzwa ngendlela ekhuselekileyo kwesi sitishi, ngoku nasebudeni beLTO.
- Ifuthe lesi sitishi kokusingqongileyo alingako xa kuthelekiswa neminye imithombo yeradiyeyishini, kwaye kukho amanyathelo athathwayo ukuze kulawulwe inkcitho. Ifuthe kokusingqongileyo lifanelekile kwaye liyakufikelela oko kulindelekileyo.
- Izinto ekuqhutywa kakuhle kuzo ziza nobungqina bokuba ikho imizekelo yokuqhuba ngendlela esemaggabini kwenkampani. Ngokomzekelo, ukuqhuba kakuhle kumba wamava okusebenza amazwe ngamazwe kungaxhasa ukuqhubeka kweKoeberg isebezenza ngendlela ekhuselekileyo, kuquka iLTO.
- Ngokusekelwe kwifuthe lomngcipheko owandayo odalwa zizikhewu ezibonwe ebuden bohlolo, aboniwe amanyathelo afanelekileyo okuphucula amele athathwe, kwaye amaxesha asikelwe wona agqalwa njengafanelekileyo nahambisana nefuthe lawo kukhuseleko.

YEKAWONKE-WONKE

Zimbini iintlobo zezikhewu eziboniwego. Okokuqala, izikhewu ezidibene nemisebenzi ekufuneka zigqitywe ngaphambi kokuba kungenwe kwILTO, njengokuhlaziya iinkqubo zokulawula ukuguga kwezixhobo. Okwesibini, bekukho izikhewu ebekufuneka zivalwe ngaphambi kwePSR elandelayo. Amanyathelo okuphucula alungisa ezi zikhewu aqukiwe kwisicwangciso esityanisiwego sokuphucula nesithunyelwe kwiNNR ukuze sigunyaziswe, kwaye aza kulandelelw aze abekwe esweni de onke amanyathelo okuphucula agqitywe.

Emva kokuhlalutya izikhewu nezinto ekuqhutywa kakuhle kuzo nokuqwalasela ukuthathwa kwanethuba kwamanyathelo okuphucula, iPSR igqibe ekubeni kuyaxhaswa ukuqhubeka kusetyenzwa ngendlela ekhuselekileyo, kuquka iLTO.

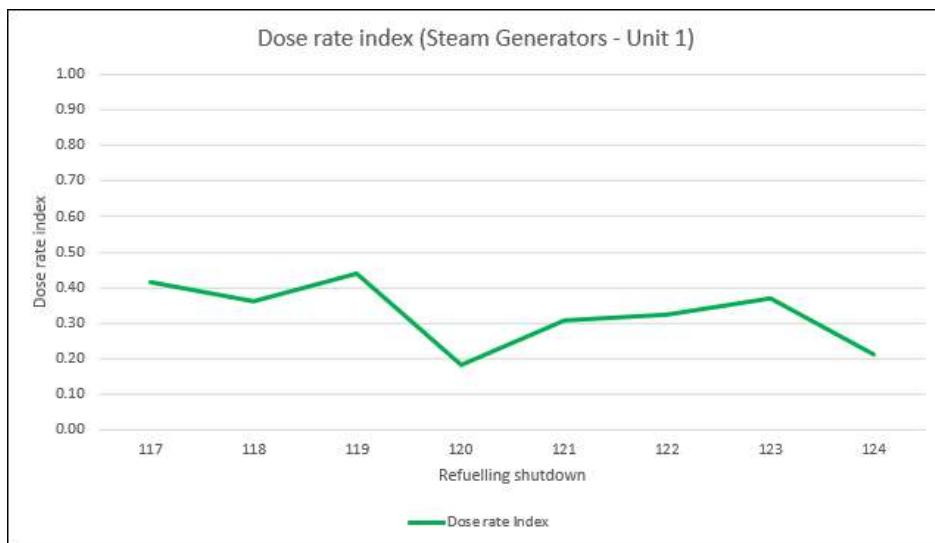

11.5 Inkqubo yokukhusela kwiradiyeyishini

Uhlolo lwenkqubo yokukhusela kwiradiyeyishini ithelekiswa nezinto ezifunwa yimiylelo nangamazwe ngamazwe luqhutyiwe ebuden bePSR. Olu hlolo lungqine ukuba iinkqubo namanyathelo alandelwayo ekukhuseleni kwiradiyeyishini ahambisana nezinto ezifunwa yimiylelo nangamazwe ngamazwe. Kukho iinkqubo namanyathelo alandelwayo akhoyo ukubeka esweni nokulawula ukuphuma kwezinto ezineradiyeyishini ziye kokusingqongileyo nokuchanabeka emsebenzini. Imida yedowusi yochanabeko emsebenzini nakuluntu iggalwa njengengaphantsi kakhulu kunemida ebekwe yiNNR. (Jonga icandelo 10.2.3 necandelo 10.2.4.)

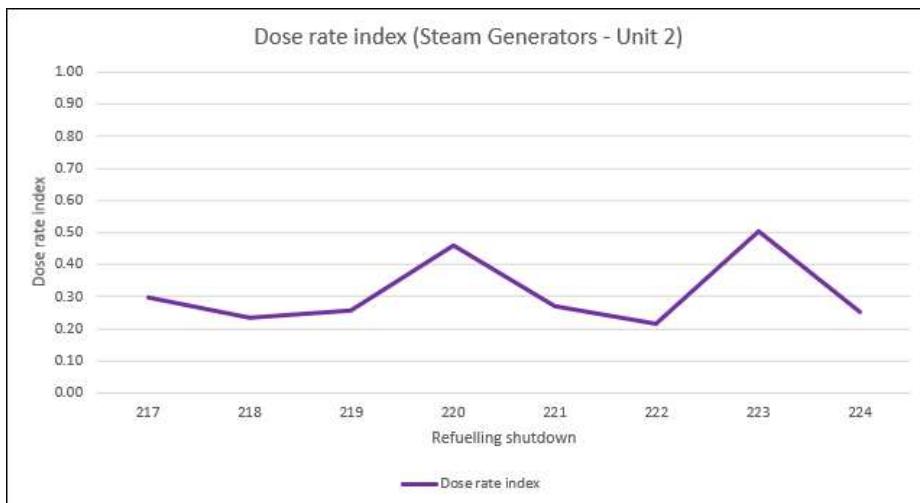

Ngaphandle kwePSR, inkqubo yokukhusela kwiradiyeyishini izuza kumava amazwe ngamazwe ngezinye izimvo ezifana namaphulo okuxhasa kubugcisa (aqhutywe ngo-2016) kune nokuhlolwa ngoontanga (okuqhutywa ngo-2021). Iphulo lokuxhasa kubugcisa nokuhlolwa ngoontanga kuqhutywe yiWANO. Zombini ezi zimvo ziye zancoma, kwakho amanyathelo okuphucula awenzelwe ukuphucula nangakumbi inkqubo yokhuselo kwiradiyeyishini.

Inkqubo yokhuselo kwiradiyeyishini ithi makubekwe esweni qho umlinganiselo wedowusi kummandla wesitishi ukuze kubekwe esweni ukunyuka kwedowusi ngenxa yotshintsho olunjengeemeko zokusebenza zesitishi, ukudyobheka yiradiyeyishini, nokufumba kweemveliso zeradiyeyishini. Imimandla yesiza iphawulwe ngeempawu ezibhaliwego, kwaye abantu abangenayo balawulwa ngokufanelekileyo, kuxhomekeka kumlinganiselo wedowusi. Iindawo ezinamaqondo aphezulu edowusi ziyatshixwa okanye ziblokwe ukuze kuthintelwe abasebenzi bangangeni. Amaqondo edowusi kwimimandla elawulwayo (imimandla yesitishi aphi abasebenzi bengachanabeka kwiradiyeyishini) aphi abasebenzi bexhaphake khona ukuze balungise okanye basebenze ibekwa esweni ngakumbi, kwaye isicwangciso namaphulo ayaphunyezwa (njengeesistimu zokugutyula, ukuhlamba, nokukhusela) ukuze kugcinwe amaqondo edowusi ephantsi kangangoko kunokwenzeka.

YEKAWONKE-WONKE

Umfanekiso 20: I-indeksi yeqondo ledowusi kwiinjini zeYunithi 1

Umfanekiso 19: I-indeksi yeqondo ledowusi kwiinjini zeYunithi 2

Amaqondo edowusi alinganiswe kwimimandla yesi sitishi aye ahlala ezzinzile ukutyhubela ixesha ngokusekelwe kwiziphumo zophononongo lwemimandla yesitishi. Umfanekiso 20 noUmfanekiso 19 isinika i-indeksi yamaqondo edowusi kwimimandla yeenjini zomphunga zeYunithi 1 noYunithi 2, ngokulandeelana. Le nto imela isampulu yamaqondo anyukayo okanye ehlayo edowusi, ngokukodwa kwiindawo ezineqondo eliphezulu ledowusi kwesi sitishi. Le indeksi yeqondo ledowusi kwimimandla yeenjini zophunga iye yaqhubeaka imalunga no-0,2 no-0,5 kuzo zombini ezi yunithi zeriyektha ngexesha ebelihlolwa ngalo ngo-2009 (Ukuvalwa Ngenjongo Yokutshintsha Amafutha 117) nango-2019 (Ukuvalwa Ngenjongo Yokutshintsha Amafutha 124) kwiYunithi 1 nango-2009 (Ukuvalwa Ngenjongo

YEKAWONKE-WONKE

Yokutshintsha Amafutha 217) nango-2020 (Ukuvalwa Ngenjongo Yokutshintsha Amafutha 224) kwiYunithi 2.

Amanyathelo okunciphisa amaqondo edowusi aye aphunyezw (njengokutofa i-zinc notshintsho kwiindlela zokusebenza), kwaye aye anceda ekunciphiseni amaqondo edowusi kwisitishi okanye awagcina ephantsi. Ukuvalwa ngenjongo yokutshintsha amafutha (ukuvalwa ngenjongo yokutshintsha amafutha). Ekubeni ephantsi kakade amaqondo edowusi emsebenzini (jonga kwicandelo 10.2.4), kulindeleke ukuba idosi yasemsebenzini iz a kuhlala ingaphantsi kakhulu kwimida ebekwa yimiylelo ebuden bexesha leLTO.

Inkqubo yokukhusela kwiradiyeyishini akulindelwanga ukuba itshintshe kwaye iz a kuqhubeka isebeza ebuden beLTO. Uphuculo oluqhubekeyo luza kubangelwa zizimvo nohlolo oluqhubekeyo lusenziwa yiKoeberg, yimibutho yamazwe ngamazwe, nayiNNR. IKoeberg iz a kuqhubeka iqiniseka ukuba abasebenzi abanobuchule, ii-instrumenti ezaneleyo zokubhaqa iradiyeyishini, izixhobo zokuphatha izinto ezineradiyeyishini ngendlela ekhuselekileyo, nezixhobo zokukhusela imizimba ziyafumaneka ukuze kulawulwe iingozi ezidalwa yiradiyeyishini eKoeberg.

11.6 Ukugadwa kwendawo neekhompyutha

Inkqubo yaseKoeberg yokugada indawo neekhompyutha iz a kuqhubeka inciphisa ukonzakala ngenxa yazo naziphi izisongelo. Imigangatho, amanyathelo alandelwayo, neesistimu ezisebenzayo, kuquka iisistimu zokukhusela umzimba ziyaphunyezw kwaye ziqhubekeyo zihlolwa zize ziphuculwe ngokusekelwe kumava omsebenzi, ukutshintsha kweemeko, uhlolo, nokhokelo IweNNR.

Inkqubo zokhuseleko ziureka amanyathelo okukhusela iinkqubo zekhompyutha ukuze kuqinisekiswe ukuba eKoeberg akungeni mntu untagunyaziswanga kwaye iinkqubo zayo zekhompyutha azihlaselwa.

Inkqubo yokhuseleko lwendawo nolweekhompyutha zenyukliya luyasebenza kwaye luyakuxhasa ukusetyenziswa ngokukhuselekileyo ngokuqhubekeyo. Uphicotho-zincwadi, uphononongo, nohlolo oluqhubekeyo lwenkqubo yokugada indawo neekhompyutha kunye nophuculo oluza kuvela kuzo luza kuqinisekisa ukuba iqhubeka isebeza lonke ixesha leLTO.

11.7 Ukucebela nokulungiselela imo yongxamiseko

Ngokwe-NIL-01, iKoeberg kufuneka ibe nesicwangciso semo yongxamiseko ukuze kuncitshiswe imiphumo yokuphuma kweradiyeyishini xa kungenzeka ingozi. Isicwangciso esikhoyo semeko yongxamiseko sele similiselwe, sihambelana nemiqathango yolawulo

YEKAWONKE-WONKE

ebekiwego yeli [30] kunye neyamazwe ngamazwe, kwaye isitishi siyaziqhelanisa nass qho ngonyaka ikhona iNNR. Amanyathelo okuphucula ayabonwa aze aphunyezwu ukuze kuqinisekiswe ukuba amalungiselelo okulungela nokusabela kwisicwangciso yemeko yongxamiseko ayasebenza.

Into ejongwayo ukuze kuthathwe amanyathelo okukhusela igqityiwe yaza yabekwa kusengaphambili. Imimandla yokucebela imo yongxamiseko ibhaliwe kuso sonke isiza saseKoeberg, imela iindawo ezingachatshazelwa kukuphuma kweradiyeyishini xa kunokwenzeka ingozi. Amanyathelo okukhusela afana nokubalekisa abantu, ukubafaka ekhusini, ukubloka ithyroid, ukufudusa abantu ayaphunyezwu ukuze kuncitshiswe ifuthe kuluntu elibangelwa kukuchanabeka kwiradiyeyishini, ukusezela iradiyeyishini esemoyeni, nokuginya ukutya okungcoliswe yiyo.

Iradiyasi yemimandla zokucebela imo yongxamiseko yaseKoeberg zichazwe kwiSicwangciso Songxamiseko Esidityanisiwego SaseKoeberg ngolu hlobo:

- Ummadla wenyathelo lokuthintela [precautionary action zone (PAZ)]: lo mmandla usuka kumda wesiza saseKoeberg uye kumgama omalunga oziikhilomitha ezi-5 ukusuka kwiiriyecktha, isiphelo sawo esisemzantsi simalunga neekhilomitha eziyi-8 ukusuka kwiiriyecktha.
- Ummadla wokucebela inyathelo lokukhusela ngokungxamisekileyo [urgent protective action planning zone (UPZ)]: le yindawo esuka kwiradiyasi yeekhilomitha ezimalunga ne-5 ukuya kwiikhilomitha eziyi-16 ukusuka kwiiriyecktha.
- Ummadla wokucebela inyathelo lokukhusela ixesha elide [long term protective action planning zone (LPZ)]: le ndawo isuka kwiradiyasi yeekhilomitha ezimalunga ne-16 iye kwiikhilomitha eziyi-80 ukusuka kwiiriyecktha.

I-PAZ yindawo aphi amanyathelo athile okukhusela ethathwa ngoko nangoko xa kubhengezwe imo yongxamiseko eqhelekileyo. Eyona nto siyifunayo kukunciphisa kakhulu umngcipheko wemiphumo ngokuthatha amanyathelo akhuselayo ngaphambi (okanye ngokukhawuleza kangangoko kunokwenzeka emva) kokuba kuphume iradiyeyishini iye kokusingqongileyo. I-UPZ yindawo aphi kwensiwe amalungiselelo okunika abantu ikuhi esizeni, kubekwe esweni kokusingqongileyo kwaye kuthathwe amanyathelo okukhusela asekewi kwiziphumo zokubeka esweni kwisithuba seeyure ezimbalwa emva kokuba kuphume iradiyeyishini. I-LPZ yindawo ebekiwego ejikeleze iKoeberg aphi kwensiwe amalungiselelo okuphumeza amanyathelo okukhusela ukuze kuncitshiswe imiphumo yexesha elide kuluntu, oko kukuthi, kuncitshiswe imiphumo engenzeka. Ngokuqhelekileyo la ngamanyathelo okukhusela exesha elide anjengokuthintela ukutya okulinywe ekuhlaleni kwiindawo ezithile ekusenokwenzeka ukuba zichaphazelekile.

YEKAWONKE-WONKE

Izivumelwano ezifanelekileyo zensiwe nabasemagunyeni basekuhlaleni, bephondo, abelizwe nemibutho yamazwe ngamazwe ukuze kuqinisekiswe ukuba ukulungela nokusabela kwimo yongxamiseko kuyasebenza. IKoeberg yenze amalungiselelo okufumana uncedo ebuden'i bemo yongxamiseko kwiEDF, kuFramatome, kwiWANO/INPO, nakwi-IAEA. Amalungiselelo neembopheleleko zombutho ngamnye abhalwe kwisicwangciso esidityanisiweyo yemo yongxamiseko yaseKoeberg.

IKoeberg ineziko lokulawula imo yongxamiseko, iziko lokuxhasa ubugcisa, neziko lokuxhasa umsebenzi afana nesazulu (base) apho amaqela emo yongxamiseko enokunikela ngenkxaso yobugcisa, yokusebenza, neyothutho ekhona ukuze alawule imo yongxamiseko. Anezixhobo ezaneleyo nezakhiwo nenkcazel'o efana nenkcazel'o yonxibelewano, eyemozulu, neyesitishi kwaye akhuselekile kwiradiyeyishini.

Abasebenzi abacebela imo yongxamiseko baqeqliwi kumanyathelo alandelwayo ekucebeleni imo yongxamiseko kwaye bafumana amava asebenzisekayo ebuden'i bokuprekthiza isicwangciso semo yongxamiseko.

Ngokuhambisana noko kufunwa yimiylelo yasekuhlaleni, kufuneka isicwangciso semo yongxamiseko sihlolwe, kuphicothwe ubugcisa, kwenziwe nophononongo. Isicwangciso semo yongxamiseko yaseKoeberg sizuzile kwizinto ezifundwe kwingozi yenyukliya yaseFukushima. Uhlolo lwenziwe eKoeberg emva kwengozi yaseFukushima ukuze kubonwe izinto ezingaphuculwa ekulawuleni iingozi ezibangelwe ziziganeko eziqatha (ezinjengeetsunami neenyikima), ngokolwalathiso lweNNR. Kuphuculwe izinto eziliqela kumanyathelo alandelwayo eplani yemo yongxamiseko yaseKoeberg ukuze kuphuculwe ukulungela nokusabela kweKoeberg kwimo yongxamiseko xa kwenzeke iziganeko ezinjalo (ezinjengamanyathelo amele alandelwe ngabasebenzi abangamalalela, izikhokelo zemozulu eqatha, amanyathelo okukhusela, ukuphuculwa kwamanyathelo akwinqanaba longenelelo).

Isicwangciso semo yongxamiseko siye sahlolwa ebuden'i bePSR yesithathu, kwaye ubukhulu bemimandla yokucebela imo yongxamiseko buye bajongwa, kucingwa ngothotho lweengozi ezinokwenzeka nefuthe ezinokuba nalo kuluntu nokusingqongileyo. Ingqiniwe into yokuba imimandla ekhoyo ngoku yokucebela imo yongxamiseko yanele ukuze isicwangciso semo yongxamiseko sisebenze.

Ukongeze koko, iPSR ingqinile ukuba iKoeberg ineezicwangciso, abasebenzi, izakhiwo, nezixhobo ezaneleyo zokujongana nemo yongxamiseko nokuba amalungiselelo ahlengahlengiswe ngokwaneleyo nabasemagunyeni basekuhlaleni nabelizwe kwaye isitishi siyaziqhelanisa nawo rhoqo. Le nto iza kuqhubeka injalo ngexesha leLTO, noxa kuphuculwa apho kubonakala imfuneko.

YEKAWONKE-WONKE

12. IZIBONELELO ZENKAMPANI ZOKUSEBENZISA ISITISHI IXESHA ELONGEZELELWEYO

12.1 Inkqubo Yolawulo

I-NOU inikwe igunya nguEskom lokuphumeza uMgaqo-nkqubo KaEskom Yenyukliya ukuze iphumeze iinjongo zenyukliya zikaEskom zokuhambisa ngokukhuluselekileyo amandla enyukliya akumgangatho wehlabathi jikelele namhlanje, ngomso nakwixesha elizayo. Izinto ezifunwa ngumgaqo-nkqubo zilawulwa ngesicwangciso sokusebenza, esihlaziya minyaka le.

Umgaqo-nkqubo wolawulo lwenyukliya kunye nokhuseleko lwenyukliya nemanyuwali yomgangatho ziye zahlolwa zithelekiswa nezinto ezifunwa kumazwe ngamazwe ngelixa lePSR. Olu phononongo lufikelele kwisigqibo sokuba lo mgaqo-nkqubo ukhoyo kunye nenqubo yolawulo zanele ukuba ukuze esi sitishi siqhubeke ke sisebenze nokuba lo umgaqo-nkqubo ukhoyo uyifikelele imiqathango yeNNR echazwe kwi-RD-0034 [11].

Inkqubo yolawulo idandalazisa ubume beenkampani, amanqanaba amagunya olawulo, neemfuneko amele onke amasebe akwi-NOU abambelele kuzo ukuqinisekisa ukuthobela imiyalelo kwaye ukuphumeza amanqanaba aphezulu okhuseleko lwenyukliya.

12.2 Amalungiselelo amaziko ezemali

Ukuqhubeka nokusebenzisa esi sitishi eminye iminyaka eyi-20 kuthetha ukuzibophelela ngokusemthethweni ekuqinisekeni ukuba imali iza kwanela iLTO namaxesha okuvala isitishi.

Ngamajelo akhe okwenza ingeniso, uEskom SOC Ltd uzibophelele ekwenzeni imali ifumaneku ukuze kukwazeke ukusebenzisa esi sitishi ngendlela ekhuselekileyo nenokuthenjwa ngexesha leLTO. ISigqeba esilawula uEskom siphonononga size sihlole imeko yezimali kaEskom minyaka le, size sibonelele ngemali eyimfuneko yokubhexesha isitishi. Ngokungqinelana noMthetho Wokulawulwa Kwemali KaRhulumente (PFMA) neminye imithetho enento yokwenza nalo mba, iSigqeba esilawula uEskom siqwalasela size sigqibe ngendlela eza kufunyanwa ngayo imali yokusebenza, nokujonga imali efunekayo kwaEskom, ngamaxesha athile (jonga iMemorandum of Incorporation kaEskom Holdings SOC Ltd efumaneka kwiwebhusiza kaEskom).

Kuxhomekeka kwiPFMA (ngokukodwa icandelo 66 lePFMA) isigqeba elawula uEskom singanyusa okanye siboleke imali ngamaxesha athile sisenzela uEskom okanye sifumane loo mali ngokuhambisana neSicwangciso Senkampani nenqubo yokuboleka ethunyelwe Mnini-sabelo.

YEKAWONKE-WONKE

12.3 Ezengqesho

Ukuze kuqinisekiswe ukuba kukho abasebenzi abaneleyo bokuxhasa umsebenzi oqhubekayo, uEskom unenqubo ephangaleleyo yokulawula abasebenzi ehambisana noqheliselo olululo lwamazwe ngamazwe. Kuthotho lweenqubo namanyathelo alandelwayo kwezengqesho kukho indlela yokulawula inkubo yengqesho eqwalasela izinto ezinjengokuthatha umhlala-phantsi, ukuyeka emsebenzini, ukuqeshwa kwabasebenzi ukuze kuqinisekiswe ukuba kukho abasebenzi abanesakhono esisiso kwilTO.

IKoeberg iyazidla ngokuba nendima eyidlalileyo ekupuhliseni nasekukhuliseni ubuchule obutsha kwinyukliya kule minyaka eyi-38 idluleyo. Le nkubo iphunyezwe ngokwayama kumanqanaba engqesho aphazelu amazwe kwihiabathi jikelele, uqequeso lwabafundi, izakhiwo zokusebenza ngesandla, abezobugcisa, neenjineli.

Uninzi loluqesho luye Iwanempumelelo eKoeberg nakwezinye izitishi ezisehlabathini zenyukliya, kwaye uninzi lwabasebenzi abaqequeshiwego luyaqhube ka lufumaneka ukuze baxhase iKoeberg.

Ngelilungiselela iLTO nemfuneko yabasebenzi abangakumbi, iKoeberg isungule iphulo lokugaya abasebenzi ukuze kuvalwe izithuba, kuthathwa ngaphakathi kwaEskom nakwiimarike zangaphandle. likhontraktha ezinamava ziye zafunyanwa ukuze zixhase ukwanda kwexeshana komsebenzi ngenxa yeLTO.

IKoeberg iqinisekile ukuba iindlela nezicwangcoso zayo zanele ukuqinisekisa ubukho babasebenzi abanesakhono esisiso abakwaziyo ukusebenza kwixesha leLTO.

12.4 Ubuchule bokusebenza kakuhle nokunokulawula ulwazi

I-NOU inenkubo yoqequeso enesiqinisekiso sokuqinisekisa ukuba abasebenzi baqequeshiwe, bahlolwa ukuba banobuchule nesakhono sokwenza imisebenzi abayinikiwego. Kukho uqequeso olwahlkileyo olu ngqaliselwe kwiimfanelko ezibaluleke kakhulu kanye nemisebenzi eyahlukileyo okanye engaqhelekanga ekufuneka kuyo ubugcisa obuphezulu, ejongwa ngokukhetekileyo kwinkubo yokuqequesha ababhhexeshi. Le nkubo yokuqequesha ababhhexeshi evunyiweyo kumazwe ngamazwe, kwaye ihlolwa qho zizigqeba eziphetheyo zamazwe ngamazwe. Inkubo yokuqequesha eyenzelwe iKoeberg yaphuhliswa ngokuhambisana nezinto ezifunwa ngamazwe ngamazwe, ingakumbi indlela enobuchule elisingatha ngayo uqequeso lwabantu iZiko Lomsebenzi Wombane Wenyukliya [Institute of Nuclear Power Operations (INPO)]

Isebe laseKoeberg loqequeso linenkubo yabasebenzi abasebenza ngobugcisa besandla, nobugcisa neenjineli eline zifundo ezibhalwayo nezenzwa ngesandla. Zithi zilandelwe iimviwo nohlolo olufanekileyo noluggale kwimisebenzi yamacandelo ngamacandelo.

YEKAWONKE-WONKE

Inkqubo yokuqequesha inkokheli nabaphathi beNOU ijoliswe ekupuhhliseni ubunkokeli nolawulo nokupuhhlisa ubuchule bokuphatha kumaqanaba acekethekileyo.

I-Koeberg inezilinganisi-sitishi (plant simulators) ezimbini ezipheleleyo zoqequesho lwababhexeshi. Ababhexeshi begumbi lokulawula (control room) kune nabaphathi beshifti abasebenzayo bafumana uqequesho olubanzi kune noviwo kwizilingisi-sitishi, okukhokelela kwilaisenisi yomsebenzi ekhutshwa yiNNR. Oku kulandelwa luqequesho oluthe gqolo lokufaneleka kune novavanyo lokuqinisekisa ukuba nobuchule obuqhubekayo.

Ukulawula ulwazi kabalulekile ukuze kuqokelelwwe kwaye kugcinwe ulwazi lwenyukliya ukuze kuxhaswe ukusebenza ngendlela ekhuselekileyo, enokuthenjwa, neyongayo. Njengoko isitsho iNNR kwi-RG-0027 [12], kufuneka kuphunyezw iinkqubo zokulawula ulwazi nokuze uEskom aqiniseke ukuba kukho ulwazi olwaneleyo ebudenai balo lonke ixesha lokusebenza kwesi sitishi. Ezi nkqubo zisaphuhlisa nangakumbi kwaye ziqbubeka zitshintsha njengoko ziphuculwa kwaye le nkqubo isandisa kuyo yonke inkampani. linkqubo zokulawula ulwazi zaseKoeberg zisebenzisa indlela edityanisiweyo ekhuthazwa yi-IAEA yokukhangela, ukufumana, ukuhlola, ukuzuza, nokwabelana ngayo yonke inkcazeloyaseKoeberg (enjengoovimba benkcazeloy, amaxwebhu, imgaqo-nkqubo, amanyathelo amele alandelwe, nobuchule obungekaze bubhalwe phantsi namava omsebenzi ngamnye) [34]. linkqubo ezahlukeneyo zokulawula abasebenzi zaseKoeberg ezinjengokucebelabaza kungena ezihangwini zabanye, ulawulo lweziphiwo zabantu, uqequesho, nokufunda umsebenzi ngokubukela kumntu owaziyo ziyasetyenziswa ukuze kuxhaswe inkqubo yokulawula ulwazi yaseKoeberg. Injongo kukwenza abasebenzi bakwazi ukusebenza ngaxhathalinye bedala ulwazi olutsha nokuqinisekisa ukuba ulwazi olubarulekileyo luyafumaneka kubasebenzi abaludingayo ukuze kusetyenzwe ngendlela ekhuselekileyo nenokuthenjwa ebudenai beLTO.

12.5 Ukuziqhelisa ukhuseleko

Ngokutsho kwe-IAEA, ukuqhela ukhuseleko lwenyukliya, eyona nto iza kuqala kwinto yonke, zizinto ezinokwenza nokhuseleko lwsitishi senyukliya ngokokubaluleka kwazo.

UEskom uye wamkela imigaqo nemikhwa yokuziqhelisa ukhuseleko yeINPO. Imigaqo nemikhwa yokuqhela ukhuseleko iye yafakwa kumaxwebhu omgaqo-nkqubo kwaye isisiseko sokuhlolwa, ukuphuculwa, nokulungiswa kokhuseleko lwenyukliya eKoeberg.

Ukuze kuqinisekiswe ukuba umsebenzi waseKoeberg uqhubeka usekelwe kwimigaqo eyamkelweyo yokhuseleko, ukuqhela ukhuseleko eKoeberg kubekwa esweni qho ngonyaka nangokuthi kuhlolwe ngokwemijikelo yeminyaka emithathu. Ukongezelela koko, njengenxalenyeyembopheleleko zabaphathi, indlela oluqhuba ngayo ukhuseleko lwenyukliya ibekwa esweni ize ifakwe kwiingxelo kumanqanaba ahlukaneyo ale nkampani.

YEKAWONKE-WONKE

Uhlolo-zimvo lokhuseleko lwenyukliya luqhutywa qho emva kweminyaka emithathu, kusetyenziswa i-INPO 12-012 (Imikhwa yeNSC eyiyo) [13]. Uphononongo lwenziwa ngo-2014, ngo-2016, nango-2019 lwaza lwafakwa kwiNNR. Imikhwa eyakhayo eyi-10 yeNSC eyiyo (ngamnye uneempawu neendlela zokwenza izinto) yahlulwe yangamacandelo aphangaleleyo amathathu (jonga ltheyibhuli 5). Xa bekuthelekisa iziphumo zophononongo lweNSC zibonise ukuba amanqaku ayo yonke imilinganiselo aphuculwe ngexesha elisusela ku-2014 ukuya ku-2019.

lingcebiso ezivela kuhlolo-zimvo lwango-2019 NSC ziye zaphunyezwa. Amanyathelo okuphucula adibene nonxibelewano neendlela zokuthethana ngokhuseleko lwenyukliya kuwo onke amanqanaba enkampani, ukuwongwa ngokubonakalayo nangokuqhubekayo nokuggalwa kwabo baziphatha ngendlela eyiyo, nophuhliiso lweqela elikhokela inkampani. Ezi zinto ziza kuhlolwa ukuba ziyasebenza na ebudeni bokuhlolwa kweNSC yonyaka.

Ngokusekelwe kuhlolo-zimvo lweNSC, iNSC eKoeberg ikwimo eyamkelekileyo kwaye ibekwe esweni ngendlela efanelekileyo ukuze kuqhutyekwe kusetyenzwa ngendlela ekhuselekileyo kwiLTO.

ltheyibhuli 5: Imikhwa eyiyo yokuqhela ukhuseleko lwenyukliya

| Imikhwa eyiyo yokuqhela ukhuselekolwenyukliya (INPO 12-012) | |
|---|--|
| Ukuzibophelela komntu ngamnye kukhuseleko | Ukuthatha uxanduva ngesimo sakho (Personal Accountability) Ukuqononondisa (Questioning Attitude) Unxibelelwano olusebenzayo lokhuseleko (Effective safety communication) |
| Ukuzibophelela kwabaphathi kukhuseleko | Ukuhlonipha indawo yomsebenzi linkokeli ezithatha imilinganiselo namanyathelo okhuseleko Ukuthathwa kwezigqibo |
| linkqubo zolawulo | Imfundo engapheliyo Ukubonwa kweengxaki Imeko eyenza kukwazeke ukuveza izinto ezixhalabisayo linkqubo zokusebenza |

13. UKULAWULWA KWENKCITHO ENERADIYEYISHINI NENDLELA YOKUVALA ISITISHI

IKoeberg ikhupha inkcitho eneradiyeishini eyirhasi, engamanzi neqinileyo eveliswa ngenxa yendlela iKoeberg esebeanza ngayo. Inkcitho eneradiyeishini ekhutshwayo ichazwa njengenkitho equlethe okanye engcoliswe zii-radionuclide ngomlinganiselo okanye kwimisebenzi engaphezu kwamanqanaba avuniwewo abekwe yiNNR. Kufuneka

YEKAWONKE-WONKE

ilawulwe ngendlela egcina abantu nokusingqongileyo bekhuselekile kwimiphumo embi yeradiyeyishini, enokuhlala ikho ixesha elide.

Eli candelo libonisa ukuba ulawulo inkcitho ekhutshwayo lukho kwaye lwanlele kwILTO. Ikho inkqubo yemithetho yokulawulwa inkcitho ekhutshwayo, kwaye amanyathelo alandelwayo neenkqubo zokulawula inkcitho ekhutshwayo eKoeberg zihambisana nemimiselo efunwa kukhuseleko ngamazwe ngamazwe, leli lizwe, nayimiyelelo. Ikho imali yokuvala esi sitishi. Ukugcinwa kwazo zonke iintlobo zenkcitho ekhutshwayo eneradiyeyishini eveliswa eKoeberg kwensiwa ngendlela ekhuselekileyo.

13.1 Inkqubo yemiyalelo elawula inkcitho eneradiyeyishini

EMzantsi Afrika, imisebenzi ebandakanya amandla enyukliya nenkcitho eneradiyeyishini ilawulwa phantsi koMthetho Wamandla Enyukliya 46 Wango-1999, uMthetho We-NNR (uMthetho 47 wowe-1999) [35], uMthetho Welizwe Wezikko Lokulahlha Inkcitho Eneradiyeyishini 53 ka-2008 [36], Umtetho Welizwe Wokulawulwa Kokusingqongileyo 107 wango-1998, neminye imithetho efanelekileyo echazwe kuMgaqo-nkqubo Welizwe Nendlela Yokulawula Inkcitho Ekhutshwayo Eneradiyeyishini [37]. Ilaisenisi yesitishi senyukliya kaEskom ibeka imimiselo engokuhanjisa nokulahlwa kwenkcitho eneradiyeyishini.

Ngokogaqo-nkqubo Welizwe Nendlela Yokulawula Inkcitho Ekhutshwayo Eneradiyeyishini, uRhulumente WaseMzantsi Afrika unembopheleko yokusungula izakhiwo ezifanelekileyo zokulawula inkcitho ekhutshwayo eneradiyeyishini kwinqanaba lelizwe. Ngenxa yoko, kusungulwe iKomiti Yelizwe Yokulawula Kwenkcitho Eneradiyeyishini ukuze ijonge ukusetyenziswa kwalo mgaqo-nkqubo ngendlela noxa iZiko Lelizwe Lokulahlwa Kwenkcitho Eneradiyeyishini (NRWDI) linikwe umsebenzi wokulawula ukulahlwa kwenkcitho eneradiyeyishini elizweni lonke. NgokoMthetho weNRWDI [36], uEskom, njengomvelisi wenkcitho eneradiyeyishini, "... unembopheleko ngobugcisa, imali nolawulo lwenkcitho [yakhe] ngokuhambisana nemithetho yelizwe kwindawo [yakhe] naxa loo nkitho ihanjisa ukuya kwindawo yokulahlha inkcitho egunyazisiwego."

Ilaisenisi yesitishi senyukliya ifuna ukuba uEskom asebenzise iinkqubo zokunciphisa nokulawula ngendlela ekhuselekileyo inkcitho ekhutshwayo eneradiyeyishini nokuba ukhuseleko loovimba benkcitho eneradiyeyishini luqinisekiswe ngexesha elilindelekileyo lokugcinwa kwayo. UMgaqo-nkqubo Wokulawulwa Kwenkcitho Eneradiyeyishini [37] ufun abavelisi benkcitho baphuhlise izicwangciso zokulawula inkcitho ekhutshwayo esizeni eziquka onke amajelo enkcitho eneradiyeyishini esizeni ukuze bagunyaziswe nguMphathiswa Wobuncwane Namandla.

Le mithetho ingasentla kulindeleke ukuba iqhubekie isebeza kwILTO.

YEKAWONKE-WONKE

13.2 Uhlahlelo Iwenkcitho ekhutshwayo

Inkcitho ekhutshwayo eneradiyeyishini ingahlahlelwa ukwenzela iinjongo ezahlukeneyo, kwaye iindlela zokuhlahlela ezahlukileyo zingasetyenziswa kumanyathelo alandelanayo okulawula inkcitho ekhutshwayo. EMzantsi Afrika, uMgaqo-nkqubo Wokulawulwa Kwenkcitho Eneradiyeyishini [37] ihlahlela inkcitho ekhutshwayo eneradiyeyishini ngala macandelo aboniswe kwiTheyibhuli 6.

Itheyibhuli 6: Uhlahlelo Iwenkcitho eneradiyeyishini

| Uhlahlelo Iwenkcitho ekhutshwayo | Ingcaciso |
|--|---|
| Inkcitho ekhutshwayo ekwinqanaba eliphezulu (HLW) | Inkcitho ekhutshwayo eneradiyeyishini evelisa ubushushu enee-radionuclide ezininzi ezhilala ixesha elide nelifutshane, ngokomzekelo, amafutha asetyenzisiweyo |
| Inkcitho ekhutshwayo ekwinqanaba eliphantsi neliphakathi - yexesha elide (LILW-LL) | Inkcitho ekhutshwayo eneradiyeyishini enee-radionuclide eziphantsi naphakathi ehlala ixesha elide nenee-radionuclide eziphakathi ezhilala ixesha elide, ngokomzekelo, inkcitho evela xa kusetyenziswa amafutha enjengeetyhubhu zamafutha. Ezi ntlobo zineziqingatha zobomi ezide. |
| Inkcitho ekhutshwayo ekwinqanaba eliphantsi neliphakathi - yexesha elifutshane (LILW-SL) | Inkcitho ekhutshwayo eneradiyeyishini enee-radionuclide eziphantsi okanye eziphakathi/okanye ene-radionuclide ezhilala ixesha elide, ngokomzekelo, izinto ezidybhekileyo ezifana nezixhobo zokusebenza xa kulungiswa, amalaphu okucoca, njalo njalo. Ezi ubukhulu becala zineziqingatha zobomi ezifutshane. |
| Inkcitho ekhutshwayo ekwinqanaba eliphantsi kakhulu (VLLW) | Inkcitho ekhutshwayo eneradiyeyishini encinane kakhulu, ngokomzekelo, izinto ezidyojwe yiradiyeyishini okanye ezinayo kancinane |
| NORM-L | Inkcitho ekhutshwayo ekungenzeka kwaye nayo iradiyeyishini encinane ezivelela ngendalo (naturally occurring radioactive material [NORM]) |
| NORM-E | Inkcitho ekhutshwayo eneradiyeyishini yeNORM enochatha |

Uyilo Iwezakhiwo zokugcina luxhomekeka kuhlobo Iwenkcitho eneradiyeyishini, iimpawu zayo kunye neengozi ezibandakanyekileyo, ubungakanani, nexesha ekulindeleke ukuba zihlale elugcinweni ngalo. EKoeberg, kukho iinkqubo ezilandelwayo ukuze kuqinisekiswe

YEKAWONKE-WONKE

ngokuchazwa, ukubalwa, iimpawu, nokuhlahlelwa kwayo yonke Inkcitho ekhutshwayo eneradiyeyishini eveliswayo. Ezi nkqubo zilandelwayo zichaza amanyathelo afunekayo ukuze isuswe ngokukhuselekileyo, ikhutshwe, ilahlwe, ithuthwe, kwaye igcinwe Inkcitho ekhutshwayo eneradiyeyishini.

Yi-LILW-SL ne-HLW kuphela ezikhoyo eKoeberg. I-LILW-SL ivela kwimithombo emininzi eyahlukeneyo. Ubukhulu becalo yinkcitho ekhutshwayo evela kwimisebenzi yokulungisa (ngokomzekelo, oomatshini, izixhobo zokusebenza, amalaphu okucoca, njalo njalo.) okanye ekusebenzeni kwizakhiwo, njengenkitho evela xa kusetyenzwa imichiza okanye iirhasi ezikhutshwa kwizakhiwo zenyukliya (ngokomzekelo, iifiltha nee-resin zokuhluza amanzi aphuma kwiiriyeektha). Amafutha enyukliya asetyenzisiwego ahlahlelwa njenge-HLW.

13.3 Ukulawulwa kwenkcitho ekhutshwayo eneradiyeyishini eKoeberg

Uhlolo IwePSR luhlole uqheliselo lokulawulwa kwenkcitho eKoeberg ukuze lubone ukuba le nkqubo iyasebenza na ekuqinisekiseni ukuba inkcitho iyancitshiswa kwaye igcinwa ngendlela ekhuselekileyo. Olu hlolo alufumananga kutenxa kwimimiselo yokhuseleko yamazwe ngamazwe, elizweni, nayimiylelo kumanyathelo alandelwayo nakwiinkqubo ezisetyenziswayo ukuze kulawulwe inkcitho eneradiyeyishini eKoeberg.

Inkcitho eneradiyeyishini yeLILW-SL neyeHLW ziyaveliswa eKoeberg xa kusetyenzwa naxa kulungiswa. Inkcitho eneradiyeyishini iyaveliswa naxa kutshintshwa izixhobo ezinkulu kuze kufakelwe ezintsha naxa kusenziwa iinguqu ekubeni kulahlwa iikhomponenti zindala. Kuza kufuneka kufakelwe nezinye izixhobo ezintsha ngaphambi nasebudenibetLO, ukuba iNNR iyagunyazisa. Isicwangciso Sokulawulwa Kwenkcitho Eneradiyeyishini YaseKoeberg idandalazisa imijelo yenkcitho eneradiyeyishini eveliswa yiKoeberg kwaye igunyaziswe liSebe Lezimbiwa Namandla.

Kuveliswa izicwangciso zokulawulwa kwenkcitho ezenzelwe into ethile ukwenzela ukutshintshwa kweekhomponenti ezinkulu (njengeetanki zamadama amafutha asetyenzisiwego eziye zatshintshwa kunye neenjini zomphunga ekucetywa ukuba zitshintshwe kwixesha elingephi). Ezi zicwangciso zigunyazisa yiKomiti Yelizwe Yokulawulwa Kwenkcitho Eneradiyeyishini. Izicwangciso zokulawula inkcitho zижолисе ekunciphiseni inkcitho eneradiyeyishini nokulungiselela ukuba igcinwe ize ilahlwe ngendlela ekhuselekileyo.

Ukugcinwa kwamafutha asetyenzisiwego (HLW) kuthethwa ngako kwicandelo 13.4. Ewonke amafutha asetyenzisiwego aveliswe ukususela oko saqala ukusebenza esi sitishi aboniswe kwiTheyibhuli 7. Zimalunga ne-55 ii assemblies zamafutha asetyenzisiwego ezifuna ukugcinwa emva komjikelo wokutshintsha amafutha ngamnye (ekungenzeka yahluke kuxhomekeka kwizinto ezinjengobude bexesha lemijikelo yokutshintsha amafutha). Ewonke amafutha asetyenzisiwego (HLW) mancinane kakhulu xa kuthelekiswa,

YEKAWONKE-WONKE

ngokomzekelo, namalahla: i-1 kg yamafutha enyukliya (U-235) inamandla awaphindaphinda kangangezigidzibini ukuya kwezithathu amandla e-1 kg yamalahla. Umlinganiselo wamafutha asetyenzisiwego kwiminyaka eyi-60 yokusebenza kweKoeberg ungakwazi ukulingana kwityhubhu emalunga ne-10 m x 10 m x 10 m. Kakade ke, indawo yokuyigcina bekuya kufuneka kwaye nkulu ukuze akwazi ukupholiswa, ukugqunywa, ukupakishwa, nokubekwa esweni.

Itheyibhuli 7: Ewonke amafutha asetyenzisiwego aveliswe ukususela oko saqala esi sitishi ukuya kutsho ku-2022

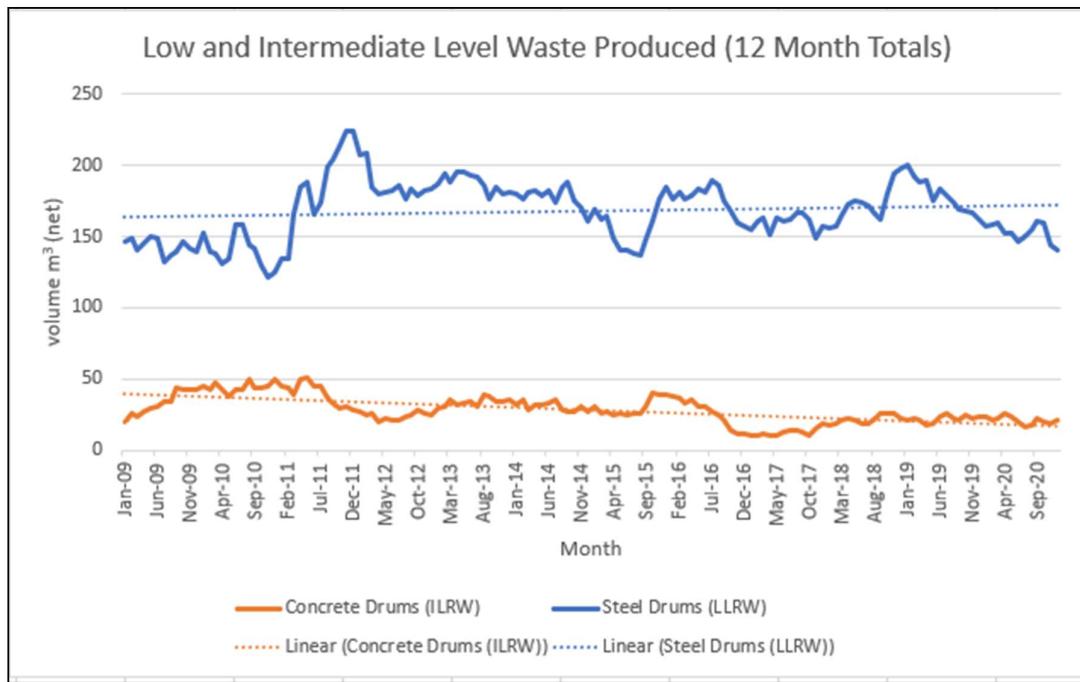

| | Imiqqomo yokugcina | Idama lamafutha asetyenzisiwego lyunithi 1 | Idama lamafutha asetyenzisiwego lyunithi 2 | Zizonke ii-assembly zamafutha asetyenzisiwego |
|-------------------------------------|--------------------|--|--|---|
| Inani lee-assembly zamafutha | 336 | 1 229 | 1 116 | 2 681 |

Umfanekiso 21 umela izimbuku zeenya eziyi-12 zomlinganiselo wenkcitho eyi-LILW-SL eveliswe eKoeberg kwixesha lePSR. Umthamo wemiqqomo yentsimbi evelisiwego uzinzile, imilinganiselo ephakathi imalunga ne-170 m³ ngonyaka, noxa umlinganiselo wemiqqomo yekhonkrithi evelisiwego wehlile ngexesha lohlolo lwePSR. Umlinganiselo wenkcitho evelisiwego usondele noko xa kuthelekiswa nemilinganiselo ephakathi yezinye izitishi, ngaphandle kwe-resin yenkcitho ekwinqanaba eliphantsi, iizisefo zokusefa amanzi enkcitho ekwinqanaba eliphakathi, nayo yonke inkcitho ekhutshwayo, eziphezulu xa zithelekiswa neUSA neFransi. Unobangela walo mahluko kukusetyenziswa kweendlela ezahlukileyo xa kusetyenzwa i-resin yenkcitho ekwinqanaba eliphantsi, iKoeberg eyiphatha njengenkitho, kodwa esuswa okanye elahlwa njengenkitho ekwinqanaba eliphantsi kakhulu eUSA neFransi.

Inkcitho eneradiyeyishini eveliswe eKoeberg igcinwa ngendlela yokuba kukwazeke ukuyisusa, ukuyisebenza, kunye(okanye ukuyilahla kamva okanye, kwimeko yezinto ezichithwayo, ikhutshwe ngokogunyaziso kulandelwa imida ebekwe yimiylelo. Ingcamango ethi "libazisa ukuze ibole (delay and decay)", "qokelela ndawonye uze uyivalele (concentrate and contain)", nethi "yivange uze uyisasaze (dilute and disperse)" ngaphambi kokuba inkcitho ithuthelwe kwindawo yokulahla inkcitho eneradiyeyishini iyasetyenziswa. Le nto iqinisekisa ukuba idowusi eya kuluntu nakokusinqongileyo igcinwa iphantsi kangangoko kunokufikeleka.

Inani lee-radionuclide kwinkcitho eneradiyeyishini esiwa kwindawo yokulahla inkcitho liyabhalwa ize lilandeletwe.

YEKAWONKE-WONKE

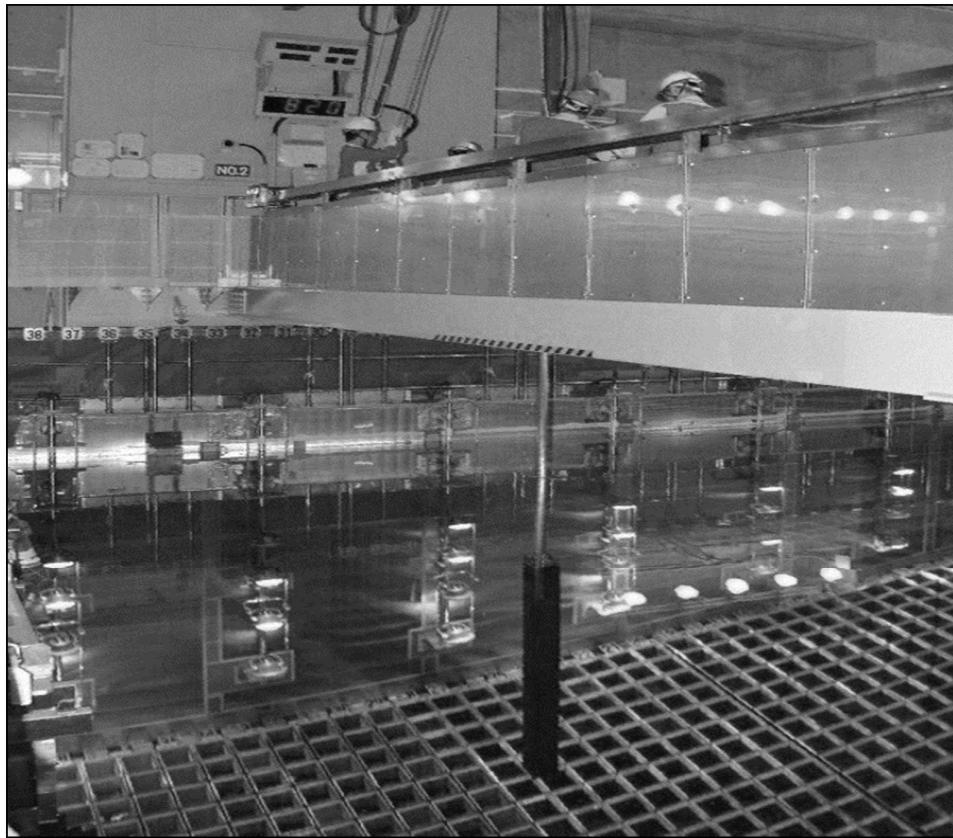

Umfanekiso 21: Inkcitho ekhutshwayo ekwinqanaba eliphakathi eveliswa eKoeberg

13.4 Ukugcinwa kwenkcitho ekhutshwayo ekwinqanaba eliphezulu, eliphakathi, neliphantsi

Sithethanje, amafutha asetyenzisiweyo (HLW) agcinwa ngokukhuselekileyo kumadama amafutha asetyenziswe ziiyunithi nakwimigqomo egqina amafutha eKoeberg. Kuye kwaphuhliswa indlela yokulawula amafutha asetyenzisiweyo ukuze kulungiselelwe ukugcinwa ixesha elide nokulahlwa ekugqibeleni kwamafutha asetyenzisiweyo. Amafutha asetyenzisiweyo aza kuqhubeaka egcinwa kumadama amafutha asetyenzisiweyo ubuncinane iminyaka eyi-10 ukuze kuncitshiswe amandla aye kumaqondo amkelekileyo ngaphambi kokuba afakwe kwimigqomo yokuwagcina kwisiza saseKoeberg. Amadama amafutha asetyenzisiweyo kunye nemigqomo yokuwagcina ziindlela ezikhuselekileyo nezinokuthenjwa zokugcina iHLW kwaye zihambisana neendlela ezisetyenziswa kumazwe ngamazwe sithethanje. Umfanekiso 23 no Umfanekiso 22 ibonisa i-assembly yamafutha isiwa elugcinweni kwidama lamafutha asetyenzisiweyo nakwimigqomo yokugcina, ngokulandelana.

YEKAWONKE-WONKE

Umfanekiso 23: I-assembly yamafutha isiwa elugcinweni kwidama lamafutha asetyenzisiweyo elifana nelaseKoeberg

Umfanekiso 22: Imiqomo yokugcina amafutha ekufakwa kuyo ii-assembly zamafutha enyukliya

YEKAWONKE-WONKE

IKoeberg ilungiselela ukuba kubekho isakhiwo sokugcina izinto sexeshana (TISF), ukuba iNNR iyagunyazisa, ukuze kugcinwe kuso eminye imigqomo yokugcina amafutha enyukliya asetyenzisiwego.

Ukuthetha noluntu, nokuthetha nabachaphezelekayo, kuza kwenziwa ebudenibamanqanaba ahlukaneyo enkubo yokulawula amafutha asetyenzisiwego. Isakhiwo esisembindini sokugcina okwexeshana (centralised interim storage facility [CISF]) siyakhiwa kwaye siza kuza nesigaba esilandelayo sokugcinwa kwamafutha asetyenzisiwego. De ibe isungulwe iCISF liZiko Lelizwe Lokulahlwa Kwenkcitho Eneradiyeyishini, iKoeberg iza kuqinisekisa ukuba amafutha asetyenzisiwego agcinwa ngendlela ekhuselekileyo esizeni. Ngenxa yoko, indawo yokugcina (imigqomo) iyandiswa, ukuba iNNR iyagunyazisa (ibizwa ngokuba sisakhiwo sokugcina sexesha elifutshane). Umgaqo-nkqubo Nendlela Yokulawula inkcitho Ekhutshwayo Eneradiyeyishini kwiRiphabliko YoMzantsi Afrika [37] ivumela ukuba igcinwe ukuya kutsho kwiminyaka eyi-100. Emva koko, lo mafutha asetyenzisiwego aya kufakwa kwinto engcityiweyo iza imbelwe kumngxuma onzulu osemhlabeni.

Ngokuhamba kwexesha, iKoeberg iza kuqhubeka ibeke esweni amanyathelo athathwe ehlabathini nophuhliso olutsha ukuze iqiniseke ukuba kusetyenziswa ezona ndlela zifanelekileyo zokulahla amafutha asetyenzisiwego. IKoeberg iza kulungiselela izicwangciso zobugcisa nezemali ezichaza ngokweenkcukacha, kangangoko kunokwenzeka, izicwangciso zayo zolawulo lutexesha elide Iwamafutha enyukliya (jonga icandelo 13.6, izicwangciso zokuvala isitishi).

Inkcitho ekhutshwayo eneradiyeyishini yeLILW-SL ifakwa kwinto engcityiweyo okanye ifakwe kwimigqomo yenkcitho ethobela oko kwamkeleke kwinkcitho ekhutshwayo yaseVaalputs kwaye igunyaziswa yiNNR. Izinto ezijongwayo ukuze yamkeleke inkcitho ekhutshwayo ezichaza iimpawu zeradiyeyishini, zokusebenza, zoqobo, zekhemikhali, nezebhayoloji zeepakeji zenkcitho ukuze kuqinisekiswe ukuba loo nkciro ivalelwa ngendlela eyiyo ize igcinwe ngendlela ekhuselekileyo. Ngokomzekelo, uhlobo, ubungakanani, nobunzima bemigqomo ziyahlahlelwa kangangoko kunokwenzeka ukuze kuqinisekiswe ukuba ziyanfana, ziyanhambelana, kwaye ziphathwa ngendlela ekhuselekileyo kuzo zonke iinkqubo zokulawulwa kwenkcitho.

Xa isalinde ukuthuthwa isiwe eVaalputs, iLILW-SL igcinwa kwisakhiwo senkcitho ekwinqanaba eliphantsi kwisiza saseKoeberg. Kulungiselelw ukuiba ibekwe esweni, ihlolwe, kwaye ilungiswe qho le nkciro kune nesakhiwo senkcitho ekwinqanaba eliphantsi ukuze kuqinisekiswe ukuba siqhubeka sithembekile. Xa kukho nakuphi na ukuwohloka kwemeko yesakhiwo okubonwe ebudenibokuhlolwa kwaso, kuye kulungiswe ngokwamanyathelo alandelwayo afanelekileyo. Le nto iza kuqhubeka isenziwa nangexesha leLTO.

YEKAWONKE-WONKE

Isiza sokulahla inkcitho saseVaalputs sisebenza phantsi kwemiqathango yaso yelaisenisi yenyukliya. SikuMntla Koloni kwaye siyilwe ngohlobo lokuba sikwazi ngokwaneleyo ukuthwala inkcitho yeLILW-SL evela eKoeberg. Ukulahla kwesi siza kuqhutywa ngokwemimiselo yelaisenisi yenyukliya. Ngo-2019, uEskom uye wazisa ngokusemthethweni iNRWDI ukuba iKoeberg igqibe kwelokuba yenze iLTO, ukuba iyagunyaziswa yiNNR, yaza yacela iNWRDI ukuba yongeze ixesha lokusebenza kweVaalputs ukuze isingathe iLTO. Indawo yokugcina eseleyo eVaalputs yanele ukuthwala inkcitho eveliswe ebudeni bexesha leLTO kwaye ixhomekeke ekugunyazisweni yiNNR.

Iwebhusayithi yeNRWDI inenkczelo eneenkcukacha ngokugcinwa kwenkcitho eneradiyeyishini ngendlela ekhuselekileyo. Le ndawo ineempawu ezenza umhlaba wayo ufaneleke njengokungafane unyikime. Imisele egcina inkcitho yaseVaalputs inobunzulu obuziimitha eziyi-8, ingqongwe ludongwe, kwaye ikwiimitha eziyi-50 ngaphezu kwamanzi aphantsi komhlaba. Xa le misele izele yimigqomo yenkcitho, iyaditywa ize ingcitywe ngodongwe olugangathiweyo oluziimitha ezi-2 ukuze amanzi emvula angangeni ngaphambi kokuba zigutungelwe ngesanti kuze kutyalo ebezilapho ngaphambili. Umfanekiso 24 ubonisa isiza sokugcina yaseVaalputs.

Umfanekiso 24: Indawo yokulahla inkunkuma yaseVaalputs [29]

13.5 Inkcitho ekhutshwayo eneradiyeyishini kwiLTO

Inkcitho ekhutshwayo eneradiyeyishini iza kuqhube ka ilawulwa ngokweKoeberg NIL-01 [1] nangoMgaqo-nkqubo Yelizwe Nendlela Yokulawula Inkcitho ekhutshwayo Eneradiyeyishini [37] ebudeni bexesha leLTO.

YEKAWONKE-WONKE

Uhlobo lwenkcitho eza kuveliswa ngenxa yeLTO luza kufana nohlobo lwenkcitho oluveliswe ukuba kutsho ngoku. Sithethanje inkcitho igcinwa ngendlela ekhuselekileyo esizeni okanye eVaalputs. Ikho indlela yokugcina ngokukhuselekileyo zonke iintlobo zenkcitho eveliswa eKoeberg ngalo lonke ixesha lokusebenza kwayo, kuquka iLTO.

I-PSR ingqinile ukuba iinkqubo namanyathelo alandelwayo eKoeberg okulawula inkcitho zihambisana noko kufunwa lilizwe, ngamazwe ngamazwe, nayimiyaletu kulawulo lwenkcitho eyirhasi, engamanzi, nenkcitho eqhelekileyo.

13.6 Isicwangciso sokuvala isitishi nemali

Ukuba nesicwangciso sokuvala isitishi esinikwa iNNR ngomnye wemiqathango yeKoeberg NIL-01. Isicwangciso yokuvala isitishi simele sithunyelwe kwiNNR ngaphambi kokuba kuqaliswe imisebenzi yokuvala, kwaye iKoeberg imele ibonise ukuba inabasebenzi nemali eyaneleyo ukuze kuphunyezwe inkqubo yokuvala isitishi.

Kukhethwe indlela yokuvala isitishi ye-“DECON” (decontamination and dismantling [ukuhanjwa nokuchithwa ngoko nangoko]), njengethona iza kusebenza eKoeberg. UESkom uphuhlise isicwangciso sokuvala isitishi, ebescinga ngeminyaka eyi-60 yokusebenza, ngokuhambisana nesikhokelo semiyalelo seNNR esiphathelele ukuvalwa kwezakhiwo zenyukliya [32].

UESkom ulungiselele ukuba kubekho imali eyaneleyo, njengoko kuboniswe kwingxelo yakhe yemali yonyaka, ukwenzela ukuvalwa kweKoeberg, kuquka ukulungisa umhlaba ochaphazelekayo nokulawula ii-assembly zamafutha asetyenzisiweyo nenkcitho eneradiyeyishini. Le mali iyahlolwa unyaka nonyaka.

14. UKUTHUTHWA KWENKCITHO ENERADIYEWISHINI NEZINTO EZINERADIYEWISHINI

UMzantsi Afrika lilungu le-IAEA kwaye usebenzisa imiyalelo yothutho ebekwe echazwe kwiZinto Ezifunwayo Yi-IAEA zokhuseleko, Izinto Ezifunwa Ngokungqalileyo Kukhuseleko, SSR-6 ukuze kuhanjiswe izinto ezineradiyewishini ngokhuseleko [31]. Ezi zinto zifunekayo ziye zafakwa kwimiqathango yelaisenisi yaseKoeberg (NIL-01). Ugunyaziso oluvela kwi-NNR lumele lufunyanwe ngaphambi kokuba naziphi iimathiriyali ezineradiyewishini zihanjiswe.

Injongo yokusebenzisa imimiselo yokuthutha yelAEA nokuyifaka kwiNIL-01 kukuqinisekisa ukuba imathiriyali nenkcitho eneradiyewishini ithuthwa ngendlela ekhuselekileyo. IKoeberg iyithutha ngendlela ekhuselekileyo inkcitho ekhutshwayo eneradiyewishini ngokuthobela iimfuno ezibekwe kwimigaqo yezothutho yelAEA, equka iindlela zokuvalela izinto ezineradiyewishini, ukuzigquma, nokulawula iqondo ledowusi elingaphandle. Ezi zinto

YEKAWONKE-WONKE

zifunwayo zifikelelwa ngokuthi kuhlangatyezwane nemigangatho yoyilo yokupakisha inkcitho nangolawulo.

Ebudeni bexesha leLTO, amafutha enyukliya noomatshini abaneradiyeyishini abasetyenziswe xa kulungiswa ziza kuqhubeka zihanjiswa ngolwandle (ngenqanawa) zisiwe kwichweba laseKapa kusetyenziswa izikhongezeli (iikhonteyina) zentsimbi ezomeleleyo eziyiilwe ngokukhethekileyo. Inkcitho ekhutshwayo eneradiyeyishini (LILW) eveliswe ngexesha leLTO iza kuthuthwa ngezithuthi ezhamba endleleni isiwe kwindawo yokulahla inkcitho ekhutshwayo eneradiyeyishini yaseVaalputs. Loo nto iza kwenziwa kuthotyelwa imiyalelo yothutho yeLAE [31].

15. UMQUKUMBELO

IKoeberg oko iqhubeka isebenza ngokukhuselekileyo ngaphezu kweminyaka eyi-36 kwaye igcine imeko yezakhwiqo ikwimeko elindelekileyo kweli cadelo loshishino. Ukutyhubela eli xesha, iKoeberg ibihlaziya ize itshintshe umsebenzi noqheliselo lolawulo lwayo ngokusebenzisa izilinganiso, uhlolo lokhuseleko, ukuhlolwa ngoogxa bayo abahlukaneyo, nokuphunyezwu kophuculo lwesti sitishi kaliqela. Indlela oluqhuba ngayo ukhuseleko nemigangatho, ngenxa yoko, zikwinqanaba elilindelekileyo kwisitishi sombane wenyukliya sale mihla.

Kuye kwaboniswa ukuba akukho mngcipheko ungfanelekanga kukhuseleko, kwimpilo, okanye kokusingqongileyo. IKoeberg ngaphantsi kwemida eyibekelwe yimiialelo, kuquka imida yomngcipheko (into eyintloko ejongwayo kukhuseleko), imida yedowusi kuluntu nasemsebenzini, nemida yokuchithwa kwezinto ezikhutshwayo. Umda wedowusi usetwe ngaphantsi kakhulu kwamaqondo ekulindeleke ukuba adale umonakalo. linkqubo zokubeka esweni neenkqubo zokulawula ezingqingqwa zikho (kubandakanya nemigaqo ye-ALARA) ukuze kuqinisekiswe ukuba iKoeberg iza kuqhubeka isebeza ngaphantsi kwemida yomngcipheko, yedowusi (kuluntu nasemsebenzini), nasekukhutshweni kwezinto ezilahlwayo ebudeni balo lonke ixesha leLTO.

Ukulungiselela iLTO kwenziwa ngokuhambisana nezinto ezifunwa kumazwe ngamazwe, elizweni, nayimiialelo. Ithotyelwa ngokupheleleyo ngokukhethekileyo imiyalelo yeLTO [2]. I-PSR neSALTO ezipheleleyo ziyenziwa kulungiselela iLTO. I-PSR inikele ngohlolo olugubungela konke lokhuseleko eKoeberg yaza yagqiba kwelithi kuyaxhaswa ukusebenza ngendlela ekhuselekileyo, kuquka nangeLTO. Ulawulo lokuguga eKoeberg luye lwahlolwa ebudeni bePSR neSALTO, kwaye ingqiniwe into yokuba iinkqubo zokulawula ukuguga zingayixhasa ngendlela ekhuselekileyo iLTO. Izinto ezifuna ukuphuculwa kukhuseleko ezibonwe ebudeni bePSR ziza kwenziwa ngamaxesha afanelekileyo.

YEKAWONKE-WONKE

Uphononongo lovavanyo lwasiza olwenziwa ngaphambili lubonise ukuba akukho zithintelo zifunyenweyo ezinokwenza ukuba isiza singafaneleki kusetyenziso oluqhubekeyo lwenyukliya. Ezi zifundo zihlaziya ngoku, zithathela ingqalelo izifundo ezifunyenwe kwiFukushima kunye nokuqinisekisa okona kuhlaziyiweyo nokuqonda okuchanekileyo kwesi siza kusetyenziswa ulwazi olukhoyo lwamva nje, iimfuno zolawulo, kunye neendlela zokuhlalutya.

IKoeberg ineenkubo eziyimfuneko zolawulo, iinkubo zokulawula abasebenzi, nezakhiwo zokuqequesha ukuze iqiniseke ukuba bakho abasebenzi abaneleyo, abakwazi ukusebenza abaza kuxhasa iLTO. linkubo zokulawula ulwazi zaseKoeberg zenza abasebenzi bakwazi ukudala ulwazi olutsha kunye kwaye baqiniseke ukuba ulwazi olubalulekileyo luyafumaneka kubasebenzi abaludingayo. Indlela ekuqhutywa ngayo emsebenzini eKoeberg kunye nokuqhelwa kokhuseleko zikwimo eyamkelekileyo.

Ngokuhambelana noMthetho Wokulawulwa Kwemali KaRhulumente kunye nomthetho oxhobisayo onxulumeneyo, iSigqeba SakwaEskom siqwelasela size sigqibe ngendlela eza kufunyanwa ngayo imali yokusebenza kwaEskom, ukujonga imali efunekayo kwaEskom, ngamaxeshwa athile. UEskom uzibophelele ekwenzeni imali ifumanekе ukuze kukwazeke ukusebenza ngendlela ekhuselekileyo nenokuthenjwa kwixesha leLTO.

Zikho izicwangciso zokugcina zokugcina nokulahla ngokukhuselekileyo zonke iintlobo zenkcitho eneradiyeyishini eveliswa eKoeberg ngalo lonke ixesha lokusebenza kwayo, kuquka iLTO.

IKoeberg ihlola ngendlela esebebenzayo ize ibeke esweni imisebenzi eyenziwa kuyo, noxa iNNR inikela ngobunkokeli obungqongqo nokubeka esweni ukuthotyelwa kwemiyalelo. Oku kusebenzisana ekucokiseni kuyenza ithenjwe into yokuba iKoeberg iza kuqhubekeyo ivelisa umbane okhuselekileyo, noccekileyo ngalo lonke ixesha leLTO.
