# DEVELOPMENT OF THE RICHARDS BAY COMBINED CYCLE POWER PLANT (CCPP) AND ASSOCIATED INFRASTRUCTURE ON A SITE NEAR RICHARDS BAY, KWAZULU-NATAL PROVINCE

Venue: 12th Floor, Southern Life Building, 88 Joe Slovo Street, Durban

**Date:** 30 August 2017

**Time:** 09:00

#### **WELCOME AND INTRODUCTION**

Gabriele Stein of Savannah Environmental welcomed all present and thanked the meeting attendees for availing themselves for the meeting. She noted that Eskom Holdings SoC Ltd (Eskom) proposes the development of a Combined Cycle Power Plant (CCPP) and associated infrastructure on Portion 2 and Portion 4 of Erf 11376 in the Richards Bay Industrial Development Zone (IDZ) Phase 1D located within the jurisdiction of the City of uMhlathuze Local Municipality and the King Cetshwayo District Municipality, KwaZulu-Natal Province. She stated that the project is to be known as the Richards Bay Combined Cycle Power Plant (CCPP).

Gabriele Stein explained that the purpose of the project is to reduce transmission losses from generation facilities supplying KwaZulu-Natal, by having a generation centre in KwaZulu-Natal. In addition, the project is planned to aid in reducing Eskom's carbon footprint per Unit of electricity produced, as power plants using natural gas emit approximately half the carbon of coal-fired power plants while using considerably less water, thus supporting Government's commitment to reduce carbon emissions.

Gabriele Stein noted that Eskom had appointed Savannah Environmental as the independent Environmental Assessment Practitioners (EAPs) responsible for undertaking an Environmental Impact Assessment (EIA) process (Scoping and EIA) to identify and assess all potential and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr). She further noted that Savannah Environmental will submit the Water Use Licence Application (WULA) for this project. She stated that the purpose of the meeting was to introduce the Richards Bay CCPP Project, present the findings of the Scoping Study, provide a description of the EIA and public participation process being undertaken and to obtain comments and inputs for inclusion in the Scoping Report to be submitted to the National Department of Environmental Affairs (DEA).

#### **MEETING ATTENDEES**

Name	Organisation	Position
Masala Nemubura (NM)	Department of Water and Sanitation	Environmental Officer
Mpho Muswubi (MM)	Eskom	Snr Environmental Advisor,
		EIA
Vincent Chauke (VC)	Eskom	Snr Manager, PDD (Acting)

Name	Organisation	Position
Mula Phalanndwa (MP)	Eskom	Senior Manager, WULA
Reggie Chippe (RG)	Eskom	Peaking Generation (Client
		Office)
Kevin Chetty (KC)	Eskom	Project Manager
Tebogo Mapinga (TM)	Savannah Environmental	Environmental Consultant
Gabriele Stein (GS)	Savannah Environmental	Public Participation
		Consultant

### **APOLOGIES**

An apology was received from Coleen Moonsamy of the Department of Water and Sanitation.

### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects regarding the proposed project (refer to attached presentation).

### **DISCUSSION SESSION**

Question / Comment	Response
MN: Were wetland delineation studies undertaken?	TM: Desktop Wetland and Aquatic Ecology and Geo-hydrology studies have been undertaken and are appended to the Scoping Report. A wetland delineation study will be undertaken during the EIA phase.
MN: What are the plans to compensate for the expected loss of water features on the site?	TM: A preliminary layout would be looked at in terms of where the infrastructure would be placed. It is our intention from an environmental perspective to try and avoid and minimize impact if we can on the water features. The layout will be configured to avoid water features. In areas where this is not possible we will recommend mitigation measures.  MP: Eskom has met with KZN Ezemvelo Wildlife to understand their concerns and some of the work regarding the biodiversity offset agreement between them and the Municipality.

MN: This meeting will be considered a pre-TM: The WULA is planned to be submitted application meeting required as part of the during the EIA phase. Water Use License (WULA) submission process. A Water Use License will be required to be VC: The WULA is planned to be submitted submitted. The conceptual designs can be once Eskom has completed the conceptual submitted with the WULA. The detailed design in October or November 2017. designs can be submitted at a later stage once they are finalized. MN: The Integrated Water and Waste TM: Comment noted. Savannah Management Plan (IWWMP) document Environmental are aware of the requirements provides details of what information is that need to be met in order to submit the required to be submitted to DWS as part of WULA. the WULA. I will send this to you. MN: The DEA will request comments from GS: Thank you, please submit comments to DWS on the Scoping and EIA reports. We will Savannah Environmental by 20 September submit our comments to the environmental 2017. A hard copy of the Scoping Report was consultant and to DEA directly. sent to Coleen Moonsamy. MN: You will be required to submit a letter TM: Comment noted. The DEA's from the DEA acknowledging that an acknowledgment letter will be included in the application for environmental authorisation WULA. has been lodged as part of the WULA. MN: The maximum timeframe for the issuing TM: Comment noted. of a WULA is 300 days.

#### WAY FORWARD AND CLOSURE

Gabriele Stein stated that Interested and Affected Parties (I&APs) could submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping Report that would be submitted to the DEA. She thanked the meeting attendees for availing themselves for the meeting and closed the meeting.

### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects regarding the proposed project (refer to attached presentation).

## **DISCUSSION SESSION**

Question / Comment	Response
CW: Is the proposed site the same erven that	TM: The project is proposed on Portion 2 and
Pulp United undertook an EIA on?	Portion 4 of Erf 11376, the same site that was
	considered for the Pulp United plant.
CW: Why is the gas pipeline being assessed	KC: Eskom will need to enter into a gas sales
under a separate EIA process?	agreement (GSA) with potential gas suppliers.
	The entity supplying the gas will be responsible
	for undertaking the EIA for the gas pipeline.
	However, the pipeline inside the power plant or
	at the boundary fence (connection point) of
	the gas power plant will be assessed in this EIA.
	Eskom is in discussions with Transnet and other
	stakeholders to determine possible routing
	options for the gas pipeline.
CW: Mondi's primary concern is the potential	TM: Mondi's concern regarding the potential
impact the power plant or power plant	impacts to their product considering the
processes would have on the quality of our	location of the warehouse in relation to the

product. Only potable water is utilised within proposed power plant site is noted. Eskom and our process to ensure the brightness and the air quality specialist will consider this whiteness of our product. The proposed concern in their layout design, and the most power plant will face Mondi's warehouse and optimal layout will be provided in the Draft EIA. this is a concern for us. CW: Eskom must note that Mondi has an Comment noted. This will be investigated by the impact on air quality from a nuisance point of air quality specialist study, which is part of the view. Odour is inherent in our process and current EIA process. Following the installation of although stringent odour abetment processes the plant, appropriate monitoring will be are adhered to, the power plant site will be undertaken by Eskom, as Mondi is also impacted by nuisance air quality impacts. expected to continue its monitoring processes. Mondi do not wish to find themselves in a situation where complaints are lodged against them regarding this nuisance impact. Eskom will need to decide whether it is acceptable to deal with this air quality impact. What are the water consumption The project will require approximately volumes requirements for the proposed power 37 290 m³ for the construction period of 36 months. Approximately 1 825 000m<sup>3</sup> will be plant? required annually during the operational phase. CW: From a cumulative impact the industry in Comment noted. Eskom is certainly aware of Richards Bay has made noteworthy efforts to the scarce water resource South Africa is facing reduce the need and demand on the water and is always investigating innovative ways to save water. Currently there is a public that is left. New industry must be on board in making efforts to reduce water demand. participation project with the Richards Bay Municipality with regards to water supply and Eskom is well represented in this regard. CW: What type of process will be used for KG: Eskom is considering installing a reverse effluent treatment? osmosis treatment plant. Eskom's transmission department will be initiating the EIA for the transmission lines which will commence once a consultant has been appointed (envisaged to be in the fourth quarter of 2017) and confirmation of this will be finalised as the engineering designs progress from concept to basic designs. CW: Would the effluent be treated so that you KG: It is likely that effluent would be discharged could feed the treated water back into the via the sea outlet. plant or are you planning on disposing effluent via the marine outlet? CW: Eskom will need to consider the air quality Comment noted. The impact assessment for air impacts from any other processes that could quality will include the following: have an impact on air quality in the region to The compilation of a baseline emissions avoid impacts to our process and quality of inventory for existing facilities within Richards

the end product.

- Bay based on measured emissions in the RBCAA inventory;
- » The establishment of an emissions inventory by referring to NMES and emission factors for combustion processes, fuel storage and fugitive dust (construction);
- » Atmospheric dispersion simulations using the US EPA CALPro suite (CALMET and CALPUFF); and
- A human health risk and nuisance impact screening assessment based on dispersion simulation results.

#### **WAY FORWARD AND CLOSURE**

Tebogo Mapinga stated that Interested and Affected Parties (I&APs) could submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping Report that would be submitted to the DEA. She thanked the meeting attendees for availing themselves for the meeting and closed the meeting.

### **APOLOGIES**

An apology was received from Sandy Camminga of the Richards Bay Clean Air Association.

### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects of the proposed project (refer to attached presentation).

### **DISCUSSION SESSION**

Question / Comment	Response
DW: Richards Bay is reported to have the	TM: The appointed air quality specialist, AirShed
second worst air quality in South Africa,	Planning Professionals, is in contact with the
second only to Secunda, due to the high	Richards Bay Clean Air Association and their
concentration of heavy industry. There are	data is being considered in the air quality
numerous industries contributing to air	assessment. The EIA will assess cumulative
emissions in Richards Bay including Mondi	impacts as well as localised impacts. The air
(who have taken steps to reduce their own	quality impacts of all industries within a 30 –
emissions), a cement factory, a smelter, a	50km radius of the proposed site will be
fertilizer manufacturing plant, a chrome	assessed. The assessment of cumulative
smelter and two titanium smelters all	impacts is a requirement of the EIA Regulations,
contributing to the second worst air quality in	2014 (as amended), and the EIA Report will
the Country. Surely a regional air emissions	include a chapter on cumulative impacts.

study has to be completed rather than a site specific one due to the excessive impact of these industries in Richards Bay. What is your proposed methodology for assessing air emissions on a cumulative scale.

The wind does blow in both directions and if the wind does blow in a certain direction it will blow the emissions over sugar cane and forestry lands as well as a few rural communities. However, if the wind blows in the opposite direction it will take the emissions over highly concentrated residential areas.

DW: This area is a severely water-stressed area. Recent rains have caused the dam levels to rise slightly. In August 2016 dam levels were at 17% and many of the industries in Richards Bay were facing closure due to no water being available. How much water will this power plant require and where will the water be sourced from?

DW: We are aware that the Municipality is undertaking a technical advisory on the potential recycling of effluent. However, this process has not been concluded. Do the water volumes provided by the Municipality meet the water consumption requirements of the power station?

The report must include a comparison of what the minimum and maximum water requirements are when using ACC technology when compared to water-cooled technology. A balance of the water consumption needs must be provided in terms of what the municipality can provide and where the shortfall will be sourced from.

DW: Are there any plans to construct a desalination plant? Will water recycling plants be considered to provide the water for the power plant?

KG: Water is planned to be sourced from the uMhlathuze Local Municipality. The Municipality has informed Eskom that they are investigating the option of using effluent from other industries in the Empangeni area. Such effluent will be treated and then used to supply the power station.

KG: Eskom is currently preparing the power station's basic design and that will tie in with the Municipality's plan. Eskom will provide the Municipality with the first opportunity to supply water and then look to other water providers if the power station's water requirement needs cannot be met.

RC: Eskom sits on a working group which is investigating the possibility of recycling water from industries in Richards Bay and Empangeni. Eskom is considering the best practice figures internationally and we cannot provide accurate water consumption figures at this stage. Accurate figures will be provided during the EIA Phase. Eskom has identified and acknowledged that water scarcity is a major risk to this project.

KC: The working group is investigating the development of a desalination plant which could provide water in the future. Eskom aims to conclude the basic design of the CCPP project by the end of 2017. The water use consumption figures will be detailed in the EIA

report. A Water Use License Application will be submitted by Savannah Environmental during the EIA phase. DW: Where will the fuel for this power plant be VC: The application for environmental sourced from? Will the fuel be supplied via the authorisation only applies to the power plant Mozambique gas pipeline, via LNG containers itself. In terms of Eskom's mandate, it is not being delivered, via an FSRU or a land-based authorised to develop or construct gas storage facility? How can an EIA for the gas Eskom is a power generation, pipelines. power plant be undertaken without having transmission and distribution company. completed an EIA for the fuel pipeline? partnership with the relevant service provider would need to be established to determine the Details pertaining to the supply of fuel must be routing of the pipeline and the supply of gas. This partnership will be responsible for the included in this EIA assessment as this aspect of the project will have a monumental impact on permitting of the pipeline and gas supply and transportation routes, safety, etc. One has to storage. It should be noted, however, that take fuel supply into consideration in this EIA. Eskom considered aspects relating to fuel supply when the site was selected. The project is being developed in phases and the project's operational requirements will be met when all the phases and aspects of the project have been considered. Eskom has experience from two plants requiring the supply of fuel in the Western Cape and therefore, understand the requirements and what the impacts are. Furthermore, Eskom has in-house knowledge, expertise and capability to mitigate and manage those impacts. Comment noted. Cheniere supports any gas to power initiative in South Africa irrespective of whether those projects are being developed by Eskom or by the private sector. Gas power is a strategic market since coal and nuclear power generation options have numerous challenges. Gas is viewed as a key part of South Africa's secure power supply. welcome any initiative that can sustainably Country move the forward in environmentally friendly way. DH: The Scoping Report states that the gas Comment noted. power plant's load factor is assumed to operate for 16 hours per day for 5 days per week (mid merit basis). The impacts should be assessed for both mid-merit and baseload options so that the EA is not constrained in the

event that the plant is required to operate at
aseload.

#### WAY FORWARD AND CLOSURE

Gabriele Stein stated that Interested and Affected Parties (I&APs) could submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping Report that would be submitted to the DEA. She thanked the meeting attendees for availing themselves for the meeting and closed the meeting.

# DEVELOPMENT OF THE RICHARDS BAY COMBINED CYCLE POWER PLANT (CCPP) AND ASSOCIATED INFRASTRUCTURE ON A SITE NEAR RICHARDS BAY, KWAZULU-NATAL PROVINCE

Venue: Richards Bay Public Library, 3 Krugerrand Grove, Richards Bay

**Date:** 31 August 2017

**Time:** 09:00

#### **WELCOME AND INTRODUCTION**

Gabriele Stein, of Savannah Environmental, welcomed all present and thanked the meeting attendees for availing themselves for the meeting. She noted that Eskom Holdings SoC Ltd (Eskom) proposes the development of a Combined Cycle Power Plant (CCPP) and associated infrastructure on Portion 2 and Portion 4 of Erf 11376 in the Richards Bay Industrial Development Zone (IDZ) Phase 1D, located within the jurisdiction of the City of uMhlathuze Local Municipality and the King Cetshwayo District Municipality, KwaZulu-Natal Province. She stated that the project is to be known as the Richards Bay Combined Cycle Power Plant (CCPP).

Gabriele Stein explained that the purpose of the project is to reduce transmission losses from generation facilities supplying KwaZulu-Natal, by having a generation centre in KwaZulu-Natal. In addition, the project is planned to aid in reducing Eskom's carbon footprint per Unit of electricity produced, as power plants using natural gas emit approximately half the carbon of coal-fired power plants while using considerably less water, thus supporting Government's commitment to reduce carbon emissions.

Gabriele Stein noted that Eskom had appointed Savannah Environmental as the independent Environmental Assessment Practitioners (EAPs) responsible for undertaking an Environmental Impact Assessment (EIA) process (Scoping and EIA) to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation measures in an Environmental Management Programme (EMPr). She stated that the purpose of the meeting was to introduce the Richards Bay CCPP Project, present the findings of the Scoping Study, provide a description of the EIA and public participation process being undertaken and to obtain comments and inputs for inclusion in the Scoping Report to be submitted to the National Department of Environmental Affairs (DEA).

#### **MEETING ATTENDEES**

### **APOLOGIES**

Apologies were received from:

- » Sandy Camminga Richards Bay Clean Air Association (Chairperson)
- » Russel Addison Umhlatuzi Valley Sugar Board (Managing Director)
- » Kevin Seamark Umhlatuzi Valley Sugar Board (Chief Financial Officer)

### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects of the proposed project (refer to attached presentation).

Question / Comment	Response
FS: It is recommended that you consult Mondi.	GS: A one-on-one meeting was held with
Mondi has previously blocked activity on the	Candice Webb the Environmental Manager at
proposed project site. I have noted that air	Mondi on 30 August 2017. Potential air quality
quality has been identified as least preferable in	impacts caused by Mondi have been raised
terms of the selected site. Air pollution works	and Eskom has taken note of these.
both ways and one would need to take	
cognisance of the air pollution impacts that	
Mondi would have on the project site and	
determine what mitigation measures could be	
implemented to reduce these impacts.	
FS: The Scoping report does not make	TM: The Scoping report identifies sulphur dioxide
reference to sulphur dioxide. Sulphur dioxide	as a source of air pollution within the region. A
emissions are a key concern in Richards Bay as	detailed Air Quality Impact Assessment will be
many industries contribute to sulphur dioxide	provided in the EIA Report.
emissions.	
FS: It is advised that Eskom join the Richards Bay	This recommendation is noted.
Clean Air Association which will provide access	
to a network of updated and relevant	
information.	
FS: Extensive studies were undertaken within	TM: The Kwambonambi Hygrophilous Grassland
Phase 1D of the IDZ in 2003/204. Kwambo	has been identified as an endangered species
Grassland (Kwambonambi Hygrophilous	in the Scoping report. Further detail on how
Grassland) was identified as an endangered	impacts to this plant species will be mitigated or
plant species. Does the Scoping report identify	managed will be provided in the EIA report.
Kwambo Grassland as endangered?	
FS: I assume that this power plant will start up on	VC: The primary fuel stock for this power plant is
diesel instead of gas. Will the plant be fully	gas. The plant will have dual fuel capabilities;
operational on diesel fuel alone?	however, the intention is to have the power
	station supplied by gas full time. The plant will
	only operate on diesel as a backup for
	emergency situations.
FS: How will the impacts on traffic be managed	TM: A Traffic Impact Assessment will be
if diesel or gas is required to be trucked in.	undertaken in the EIA phase of this project, and
	will also address issues related to transportation
	of the fuel. Traffic impacts will be assessed and
	appropriate management measures proposed
	and presented in the Traffic Impact Assessment
	and in the EIA Report. Gas will not be trucked in
	but will be supplied by a gas supplier via its
	pipeline to the Eskom connection point at the
	boundary fence of the plant. Only diesel (used
	as back-up) will be trucked in.

FvdW: What will the power plant's visual impact be? The power plant's proximity to the John Ross Highway must be considered. TM: Afzelia Environmental Consultants have been appointed to undertake a Detailed Visual Impact Assessment. The Scoping report provides detail on the visual receptors in the area that would be impacted by the development. At this stage, the visual impact is considered to be *medium-low* subject to a detailed assessment being undertaken in the EIA phase.

FvdW: This power plant will be a Major Hazardous Installation (MHI). The location of the power plant in close proximity to the John Ross Highway, a critical arterial to the Richards Bay Port, must be considered.

TM: A MHI assessment is being conducted and will form part of the EIA report. The potential impact of the facility on the John Ross Highway will be considered in the MHI assessment.

FvdW: The same site was subjected to an EIA for Pulp United. A number of environmental challenges were identified during that process. I am glad that you are aware of these challenges. Too often we find that outside consultants are unaware of other environmental assessments undertaken in the area.

TM: Savannah Environmental are fully aware of the challenges faced with regards to the Pulp United EIA that was previously conducted. Phase 1D is approximately 107ha in extent. The project study site is 71ha, as the off-set area has to be avoided. The footprint of the power plant is likely to be less than 71ha depending on the environmental sensitivities on the site. The entire power plant may I require approximately 60ha.

What is the full extent of that site? My concern is that there will not be sufficient space to develop the project due to the environmental sensitivities identified on the site.

FvdW: I am not supportive that Phase 1D is being considered as the site for the development of the proposed power plant due to the potential visual impacts and that it will be a MHI. This project will have a negative impact on the proposed Richards Bay Port expansion. More appropriate sites should be considered, for example, sites within Phase 2 of the IDZ might be better suited for the development of a power station.

TM: Comment noted. Afzelia Environmental Consultants have been appointed to undertake a Detailed Visual Impact Assessment. Scoping report provides detail on the visual receptors in the area that could be impacted by the development. At this stage, the visual impact is considered to be medium-low subject to a detailed assessment being undertaken in the EIA phase. Eskom identified six potential sites within the greater Richards Bay area for the development of the proposed power plant. Four sites were taken forward into an environmental screening study. The process followed in determining which sites were most preferred is outlined in Chapter 3 of the Scoping report. Phase 1D is considered to be the most preferred alternative for consideration in the environmental screening and site selection

study. The area surrounding the project site is inclusive of open fields, industrial activities, and pockets of commercial activities. The proposed development is, therefore, compatible with the surrounding land uses. No fatal flaws from an environmental perspective were identified. Mitigation in terms of air quality through appropriate design of the facility will however be required. FvdW: Where will the proposed power station VC: Eskom has undertaken desktop level studies connect to the Eskom grid? The transmission in relation to the transmission lines. lines will be subject to an EIA. Why is this aspect corridor alternatives have to be selected and assessed within an EIA. This project is being of the project not included within this EIA? developed in a phased approach and the permitting of the transmission lines will be undertaken once Eskom has completed the required options analysis and technical studies with respect to the transmission lines. Since the current site is the only site deemed most feasible, all Transmission corridors being investigated are leading to this site. FvdW: The gas pipeline will require an EIA. The VC: A partnership needs to be established with pipeline route is critical as it may impact the other state-owned companies or with private Richards Bay Port expansion project. companies to establish the gas pipeline. This entity will be responsible for the permitting required for the pipeline. More work needs to be undertaken in this regard from a technical and commercial point of view. FvdW: That specific location concerns me. A VC: As Savannah Environmental indicated in much better site would be next to the Athene the presentation, Eskom commissioned a Site Transmission Station in Empangeni because of its Screening and Selection Study to identify the proximity to the Sasol pipeline. The power most preferred site for the power plant. The Site Screening and Selection Study details the station can also connect to the Athene Transmission Station. This site would make more methodology used and the factors considered sense as there would be limited visual and air in selecting this site as the most preferred alternative. The Scoping report provides further quality impacts. details in this regard. KG: The current planning is that only diesel will FvdW: Where will the product be stored and where is your strategic reserve going to be be stored on the site. stored. This needs to be considered within the EIA. Is the storage going to be included within the footprint that you are referring to or will it be at another location?

FvdW: My sentiment is that this EIA cannot be approved until you have clarified the routing of the transmission lines and the pipelines.

Comment noted.

ON: My interest in this project is the potential impact of the project on aviation. The IDZ is positioned in line with the runway of the Richards Bay Airport. It is approximately 4.5 miles from the runway threshold. Any development in line with the runway might affect aircraft operation and the decent gradient onto the runway. From an advisory point of view, Eskom needs to take this into consideration and consult the Civil Aviation Authority (CAA) so that an obstacle evaluation assessment can be undertaken.

RC: Eskom has received correspondence from the CAA. Eskom is liaising with Lizell Stroh, Obstacle Specialist – Aviation Obstacle and GIS, and she has advised that the application for obstacle evaluation assessment should be submitted once the project is in an advanced stage, once the heights have been determined.

RvN: Why are the EIAs for the various project components being undertaken separately?

VC: Eskom is unable to undertake the EIA for the fuel supply pipeline as the gas supplier will conduct this. A partnership needs to be established with other state-owned companies or with private companies to establish the gas pipeline. This entity will be responsible for the permitting required for the pipeline. More work needs to be undertaken in this regard from a technical and commercial point of view. Eskom's transmission department will be initiating the EIA for the transmission lines which will commence once a consultant has been appointed (envisaged to be in the fourth quarter of 2017). Once this is completed the EIA for the powerlines will commence. It should be noted that Eskom is not developing the power plant in isolation from its other critical components. Consultation with various stakeholders and state-owned companies are ongoing.

KC: In terms of the project lifecycle for generation project, the Transmission EIA lags the facility EIA (generation). Eskom's transmission department will be initiating the EIA for the transmission lines which will commence once a consultant has been appointed (envisaged to be in the fourth quarter of 2017). Desktop and conceptual studies were undertaken from Eskom's transmission, generation and technical

engineering departments. This information was used to inform the Site Screening and Selection Study. Eskom's transmission department will be initiating the EIA for the transmission lines which will commence once a consultant has been appointed (envisaged to be in the fourth quarter of 2017). Eskom has to select three corridors and a few substations close to the site are being considered. Also, Eskom is taking due consideration of future developments planned within the IDZ. Eskom is working very closely with the IDZ as well as Transnet and other key stateowned companies. It is expected that the Scoping Report for the transmission lines will be available in due course.

RvN: Do you have your plans in place already in terms of where the application area will be?

KC: Yes, transmission studies have been undertaken on a desktop level, and some corridors were identified.

FvdW: This project must take cognisance of other developments such as the relocation of the airport and the expansion of the port. With all due respect to Eskom, we have been involved in EIAs in Richards Bay where the same mistake was made. Applicants separated the transmission lines from the substation EIAs and then it failed. It is tax payers' money that Eskom is wasting by using this approach. Rather undertake a Scoping Study on the preferred sites and investigate more sites and present realistic solutions. Undertaking an EIA on this site is premature if you do not know what your source of supply is and where your source of supply is going to be stored. The UVS site would have been optimal for this development but was dropped to environmental concerns.

VC: Eskom is not working in isolation. Key stakeholders and government departments are being consulted and we are aware of other developments taking place in Richards Bay.

MP: It should be noted that some of the sites considered within the Site Screening and Selection Study were considered no-go areas for development due to water related issues. The UVS site (Site 4a) is not preferred from an environmental perspective as the impacts on the aquatic ecology and wetlands may present an impact of high significance in these areas which cannot be avoided.

DH: The Vortum Energy Project and the Accelor Mittal Thermal Plant located in Saldanha in the Western Cape recently received environmental authorisation from the Department of Environmental Affairs (DEA) which also excluded the grid connection and pipeline infrastructure. DEA has approved the impact of the power plant in isolation, with the condition that the remaining project components must

Comment noted.

receive environmental authorisation within two	
years.	
DH: Was access to sea water cooling one of the	TM: Access to sea water cooling would have
criteria for this development?	been a criterion if the project site was located
	along the coast.
FS: What is the reason for developing this project? It seems as though 3000MW is more than Richards Bay requires in the future with the development of other energy related projects.	VC: The purpose of the project is to reduce transmission losses from generation facilities supplying KwaZulu-Natal, by having a generation centre in KwaZulu-Natal. Also, the project is planned to aid in reducing Eskom's carbon footprint per Unit of electricity produced, as power plants using natural gas emit approximately half the carbon of coalfired power plants while using considerably less water, thus supporting Government's commitment to reduce carbon emissions. It should be noted however, that Eskom are still undertaking feasibility studies to determine whether the development of such a power plant will be viable. Eskom will decide whether to proceed with the implementation of this power plant once the permitting requirements and regulatory compliance requirements have
RvN: In terms of the air quality would it be possible for you to present the impact on residential areas in Richards Bay?	been met.  TM: Air quality impacts to residential areas in Richards Bay will be detailed in the Air Quality Impact Assessment which will be undertaken in
	the EIA phase.
GL: Is the intention of this power plant to be part of the primary generation of Eskom or will it be a standby plant that will only be used if necessary. Is the plant going to run fulltime or on a standby basis?	KG: The plant is a mid-merit plant that will operate for 16 hours per day for 5 days per week.
FvdW: I hope that the EIAs being undertaken by the private sector will continue. NERSA is the deciding factor and will make the decision based on rate. Eskom cannot develop a plant like this in competition and price wise then it should go to the private sector. The sad thing is that in this instance the tax payers are funding this EIA. IPPs should be assisted by our government to do these studies because at the end of the day this is all to the benefit of the Country.	Comment noted.

#### WAY FORWARD AND CLOSURE

Gabriele Stein stated that Interested and Affected Parties (I&APs) could submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping Report that would be submitted to the DEA. She thanked the meeting attendees for availing themselves for the meeting and closed the meeting.

# DEVELOPMENT OF THE RICHARDS BAY COMBINED CYCLE POWER PLANT (CCPP) AND ASSOCIATED INFRASTRUCTURE ON A SITE NEAR RICHARDS BAY, **KWAZULU-NATAL PROVINCE**

## NOTES OF THE FOCUS GROUP MEETING **TRANSNET** HELD ON: 31 AUGUST 2017 BOARDROOM 253, MALAHLE HOUSE, KIEWIET ROAD, EMPANGENI

Notes for the Record prepared by:

Savannah Environmental (Pty) Ltd Contact: Ms Gabriele Stein

Position: Public Participation and Social Consultant **E-mail:** gabreiele@savannahsa.com

Please address any comments to Gabriele Stein at the above address

## DEVELOPMENT OF THE RICHARDS BAY COMBINED CYCLE POWER PLANT (CCPP) AND ASSOCIATED INFRASTRUCTURE ON A SITE NEAR RICHARDS BAY, KWAZULU-NATAL PROVINCE

Venue: Boardroom 253, Malahle House, Kiewiet Road, Empangeni

**Date:** 31 August 2017

**Time:** 12:30

#### **WELCOME AND INTRODUCTION**

Gabriele Stein, of Savannah Environmental welcomed all present and thanked the meeting attendees for availing themselves for the meeting. She noted that Eskom Holdings SoC Ltd (Eskom) proposes the development of a Combined Cycle Power Plant (CCPP) and associated infrastructure on Portion 2 and Portion 4 of Erf 11376 in the Richards Bay Industrial Development Zone (IDZ) Phase 1D, located within the jurisdiction of the City of uMhlathuze Local Municipality and the King Cetshwayo District Municipality, KwaZulu-Natal Province. She stated that the project is to be known as the Richards Bay Combined Cycle Power Plant (CCPP).

Gabriele Stein explained that the purpose of the project is to reduce transmission losses from generation facilities supplying KwaZulu-Natal, by having a generation centre in KwaZulu-Natal. In addition, the project is planned to aid in reducing Eskom's carbon footprint per Unit of electricity produced, as power plants using natural gas emit approximately half the carbon of coal-fired power plants while using considerably less water, thus supporting Government's commitment to reduce carbon emissions.

Gabriele Stein noted that Eskom had appointed Savannah Environmental as the independent Environmental Assessment Practitioners (EAPs) responsible for undertaking an Environmental Impact Assessment (EIA) process (Scoping and EIA) to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation measures in the Environmental Management Programme (EMPr). She stated that the purpose of the meeting was to introduce the Richards Bay CCPP Project, present the findings of the Scoping Study, provide a description of the EIA and public participation process being undertaken and to obtain comments and inputs for inclusion in the Scoping Report to be submitted to the National Department of Environmental Affairs (DEA).

#### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects regarding the proposed project (refer to attached presentation).

#### **DISCUSSION SESSION**

Question / Comment	Response
VK: Is Eskom aware of the Port Expansion	KC: Eskom is aware of the Port Expansion
Programme. This programme is being	Programme and are engaging with the Transnet
developed in phases and implementation is	Port Authority and the Richards Bay IDZ in this
likely to commence in 2050.	regard. It should be noted that the Richards Bay
	CCPP lifespan is approximately 20 years and the
	plant is likely to come online by 2023. Therefore
	the power plant is likely to be decommissioned
	before 2050.
VK: How many people will be based on the	RC: Approximately 800 – 1000 people will be on
site during the construction and operation	site during the construction phase and 80 – 100
phases?	people during the operation phase.
VK: What modes of transport will be moving	RC: A gas pipeline will be used to supply gas to
in and out of the proposed power plant?	the power plant as the primary fuel. Fuel tankers
	will be used occasionally should diesel be
	required to operate the facility as a back-up (this
	is all during operation of the power plant). During
	construction there will be construction vehicles
	moving in and out of the site on a regular basis.

VK: Has a Traffic Impact Assessment been undertaken?

TM: A Traffic Study was undertaken as part of the Environmental Screening and Site Selection Study and a Traffic Impact Assessment will be conducted during the EIA phase.

TF: Transnet infrastructure and servitudes are not affected by the proposed development. Transnet will require a better understanding of how the gas pipeline and the transmission lines would impact on Transnet infrastructure.

TM: It is noted that the power plant project does not impact on Transnet's servitudes or infrastructure. A separate EIA applications will be undertaken for the transmission lines. The potential gas supplier whom Eskom will enter into consider a Gas Sales Agreement (GSA) will conduct an EIA for its gas pipeline corridor from the power plant to Eskom's connection point at the boundary fence of, and the power plant. The gas pipeline from this connection point to Eskom's power plant is part of service provider will be responsible for authorisation processes from the associated infrastructure included in this EIA.

#### WAY FORWARD AND CLOSURE

Gabriele Stein stated that Interested and Affected Parties (I&APs) should submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping Report that would be submitted to the DEA. She thanked the meeting attendees for availing themselves for the meeting and closed the meeting.

#### **BACKGROUND & TECHNICAL ASPECTS REGARDING THE PROPOSED PROJECT**

Tebogo Mapinga of Savannah Environmental presented the background and technical aspects regarding the proposed project (refer to attached presentation).

#### **DISCUSSION SESSION**

Question / Comment	Response
SC: How were the sites selected? I am not entirely convinced that the other three sites options which were assessed were even viable to begin with.	KG: The sites along the coast were chosen based on the technology that Eskom wanted to use for the power plant, which was wet cooling technology and planned to use sea water for cooling. The two inland sites were chosen based on their availability for power generation following discussions with the landowners.
	MP: Eskom's project selection criteria does not consider technology only. Transmission studies and the cost of the project are considered as well. Eskom undertook a pre-site selection screening exercise prior to these four sites being selected. Richards Bay is identified as the best locality for this project as the Department of Energy (DoE) plans to implement a gas-to-power programme in Richards Bay which would include the supply of gas to the port. Three of the sites were not selected based on cost factors. Eskom commissioned an Environmental Screening and Site Selection Study which was undertaken by Savannah Environmental prior to the commencement of the Scoping Study. The site selection report was concluded and approved in Mach 2017.
SC: Was there any consultation with the City of	TM: The City of uMhlathuze Municipality was
uMhlathuze Municipality during the	consulted during the Environmental Screening
Environmental Screening and Site Selection	and Site Selection Study. It is Eskom's intention
Study.	to continue to liaise and engage with the

	Municipality during the EIA process and during
SG: It is true that site 4a, 5 and 6 are deemed unfeasible for various reasons. These sites should not be presented as alternative sites in the EIA as they are deemed unfeasible.	the entire life cycle of the project.  TM: These sites were assessed in the Environmental Screening and Site Selection Study that was undertaken prior to the EIA process being initiated. Site 4a, 5 and 6 are not presented as alternative sites in the Scoping report.
	It is important to demonstrate how the site was selected prior to the Scoping study being initiated, therefore, the process undertaken for the Environmental Screening and Site Selection Study is detailed in the Scoping Report. A motivation as to why these sites were not preferred has been included in the Scoping report.
SC: With all due respect you cannot present unfeasible sites as alternative sites. It is disingenuous if you present four sites as alternatives which are deemed unfeasible from the commencement of this process.	KG: There are two processes which were undertaken prior to the Scoping study being undertaken. First, Eskom undertook an assessment of six potential sites from an engineering and cost perspective. Technical and landowner issues reduced the potential sites to four. Second, Savannah Environmental was commissioned to undertake an Environmental Screening and Site Selection Study. Four sites were assessed within this study. The result of this study was that Site 7 is considered to be the most preferred alternative considered within this Environmental Screening and Site Selection Study. No fatal flaws from an environmental perspective were identified at this stage in the process. A Scoping and EIA study are now being undertaken on Site 7. The other sites are not being considered as alternative sites within the EIA.
SG: It is important to note within the Scoping and EIA report that an initial Environmental Screening and Site Selection Study was undertaken and that the sites assessed are not being assessed within the EIA.	TM: The Environmental Screening and Site Selection process is detailed in Chapter 3 of the Scoping report.
SG: The City of uMhlatuze Municipality is concerned that this project is not being planned holistically as the gas pipeline, the LNG import terminal and the liquefaction plant are	KC: This project is being developed in a development phased approach where the project is considered holistically. The pipeline and transmission power lines are being

excluded from this EIA. It is the Municipality's considered by Eskom even though separate EIA sentiment that this project needs to be dealt processes are being undertaken for these with from a cumulative perspective. project components. Eskom is in the process of appointing an EIA consultant to undertake the environmental assessment required for the transmission line infrastructure. This process will not lag far behind the EIA for the power plant. With regards to the gas pipeline, Eskom's commodities department is responsible for sourcing potential gas supply through various stakeholders. The gas supplier will be responsible for the permitting requirements of this project component, therefore a separate EIA will be undertaken by the entity responsible for the gas. It must be noted that Eskom will not present a business case for this power plant if all the project components are not in place. SG: It must be noted that as much as Phase 1D TM: The terrestrial, ecological and hydrological is being made available for purposes of gas impacts will be further assessed in the EIA phase development there are issues that need to be and detailed impact assessments will be tested through an environmental process. provided in the specialist studies and EIA report. These issues relate to terrestrial, ecological and hydrological impacts identified Environmental Screening and Site Selection Study. SG: The presentation should have included TM: Comment noted. The presentation more detailed information on the power plant provided a summary of the infrastructure processes. required for the power plant and the technology being investigated. Detailed information is presented within the Scoping Report. SC: The Richards Bay Clean Air Association is KC: The Richards Bay CCPP will be operated on concerned that there is no gas available to gas with diesel as a back-up in case there is an supply a gas power plant in Richards Bay. We emergency situation. It would not be feasible will not support a gas power plant which will be to operate the power plant solely on diesel as operated using diesel because there is no gas this is too expensive and harmful to the available. environment. Eskom is currently engaging with various stakeholders to source gas. There is a possibility that gas could be imported from Mozambique via a pipeline. SC: There is no EIA process underway for the KC: Eskom's governance will not approve the gas supply. My sentiments are that the EIA for business case for this power plant if the fuel power plant is being undertaken source is not available. Eskom is mandated to

prematurely.

The critical component of this

project is the supply of gas and this need to be

source the gas from potential gas suppliers and

Eskom would be unable to proceed with the

put in place prior to the power plant being project if the gas is not sourced. Eskom will not approved. We do not want a gas power plant run this plant on diesel as its primary source of operating on diesel in Richards Bay. Will the Air fuel. The power plant will operate on a mid-Quality Impact Assessment investigate the merit basis of 16 hours a day for 5 days a week worst-case scenario which is a power plant that on aas. It will not operate at baseload, runs entirely on diesel? This is an assumption although the EIA will assess the impacts for both that the Richards Bay Clean Air Association is mid-merit and baseload cases. going to make until there is an LNG facility in Richards Bay. SG: It is understood that the gas pipeline, the KG: Comment noted. Eskom is engaging with LNG import terminal and the liquefaction the Department of Energy on an ongoing basis. process plant will be operated by different Eskom forms part of the committee that is entities. It is important to understand that the working on the SEA. National DEA is in the process of undertaking a Strategic Environmental Assessment on the gas network and it is assumed that this assessment will include LNG aspects. However, it is imperative that I&APs are provided with a holistic understanding of this project. SC: Does the Air Quality Impact Assessment The Air Quality Impact Assessment TM: investigate air quality impacts on the facility considers air quality impacts with the facility operating on gas or the facility operating on operating on gas as the primary fuel and diesel diesel? as a backup. SC: The term "back-up" needs to be clearly KG: The term "back-up" will be quantified and clarified in the report. Diesel will not be used to defined in the Scoping and EIA reports. operate the plant for 16 hours a day for 5 days a week (only natural gas will be used for this purpose). Diesel will only be utilised in extreme worst-case scenarios. The quantities of diesel will be small. SG: Is this plant considered a Major Hazardous TM: The power plant is considered to be a MHI Installation (MHI)? and an MHI assessment will be undertaken in the EIA phase. SC: The project will require approximately What are the water consumption requirements for the power plant? There is no 37 290 m³ for the construction period of 36 months. Approximately 1 825 000m<sup>3</sup> will be water available for this project at this stage. required annually during the operation phase. Two cooling technology alternatives are being considered for the project namely dry cooling and once-through cooling. KC: Eskom is aware of the water constraints in the region and Eskom has representation in working group that has been established to

investigate various water supply options for the

	region. Options being considered include the utilisation of treated effluent from other industries in the area, a desalination plant and a water treatment plant on the site.
SC: Is effluent discharge going to go into uMlathuze Effluent Pipeline and out to sea?	KG: Effluent will be discharged to sea via the uMhlathuze Effluent Pipeline.
SG: Are there any other combined cycle power plants in South Africa?	KC: There are no combined cycle power plants in South Africa currently.
DW: The agreements regarding the biodiversity offset between KZN Ezemvelo wildlife and the City of uMhlathuze Municipality will remain in place.	GS: Comment noted, the agreement should be updated to make it relevant to the Richards Bay CCPP project once the DEA has issued its decision.
What kind of waste would be generated by the power plant?	KG: The waste which would be generated would include sewage, waste from the reverse osmosis plant.
SC: Will rain water be harvested at the proposed power plant?	KG: Onsite rainwater harvesting will be implemented. Eskom's policy is to have a zero discharge so all rain water is harvested. This water could be used for domestic use and in the cooling process.
SG: The site is in close proximity to Mondi. Have any incompatibilities with those land users been assessed (i.e. the pulp mill).	TM: A meeting has been held with Mondi and further discussions will be held in this regard and comments on the DSR are expected to be submitted.
SG: Phase 1D consists of 3 portions and the portion being investigated are Portion 2 and Portion 4 of Erf 11376. Portion 3 of Erf 11376 will likely be traversed by infrastructure such as access roads. It must be noted that any infrastructure linking to the site would need to bypass the off-set area. We would need an understanding of what infrastructure will need to traverse Portion 3 of Erf 11376.	TM: The detailed layout will be presented in the EIA report. Eskom will ensure that the offset areas are avoided.
SZ: The Scoping report does not make reference to abatement technologies that will be used in case the plant is required to operate on diesel.	KG: The requirement for emissions for diesel is that they should be within the air emission limits. Nox and Sox emissions would need to fall within these limits.

#### WAY FORWARD AND CLOSURE

Gabriele Stein stated that Interested and Affected Parties (I&APs) could submit their written comments on the Scoping Report and proposed project to Savannah Environmental by 20 September 2017. She noted that comments received would be included in the final Scoping

Report that would be submitted to the DEA. She	the	meeting	attendees	for	availing
themselves for the meeting and closed the meeting.

## RICHARDS BAY COMBINED CYCLE POWER PLANT (CCPP) AND ASSOCIATED INFRASTRUCTURE NEAR RICHARDS BAY, KWAZULU-NATAL

Public & Focus Group Meetings 30 - 31 August 2017

## **MEETING AGENDA**

- 1. Welcome and Introduction
- 2. Purpose of the Meeting
- 3. Project Overview
- 4. Overview of EIA Process
- 5. Discussion session

## WELCOME AND INTRODUCTION

- » Savannah Environmental (Pty) Ltd
  - \* Tebogo Mapinga (EAP)
  - \* Gabriele Stein (Public Participation Consultant)
- » Eskom Holdings SoC Ltd (Eskom)
  - \* Mpho Muswubi (EIA)
  - \* Kevin Chetty (Project Manager)
  - \* Mula Phalanndwa (WULA)
  - Reggie Chippe (Peaking generation)
  - Vincent Chauke (Senior Manager, PDD)
  - \* Koogendran Govender (Chief Engineer)
  - Cobus Dippenaar (Project Engineering Manager)
  - Khaya Kebeni (Client Officer)

## SAVANNAH ENVIRONMENTAL (PTY) LTD

- » Appointed as the independent Environmental Assessment Practitioners (EAP)
- » Responsible for the:
  - Environmental Impact Assessment (EIA)
  - \* Management of independent specialists
  - \* Public Participation (PP) process
  - \* Application for the Water Use License

#### PURPOSE OF THE MEETING

- » Introduce the Richards Bay CCPP Project
- » Present the findings of the Scoping Study
- » Provide a description of the EIA and Public Participation process being undertaken
- » Obtain comments for inclusion in the Scoping Report to be submitted to DEA

#### RICHARDS BAY CCPP PROJECT

- » Combined Cycle Power Plant (CCPP) with a maximum generating capacity of up to 3000MW and associated infrastructure
- » Project site is located on Portion 2 and Portion 4 of Erf 11376 (71ha) within the Richards Bay Industrial Development Zone (IDZ) Phase 1D
- » City of uMhlathuze Local Municipality and the King Cetshwayo District Municipality

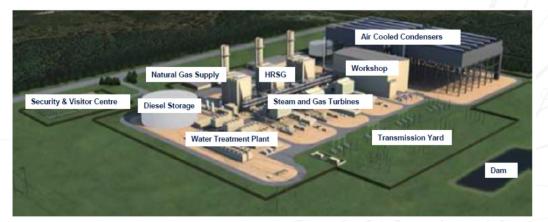

## RICHARDS BAY CCPP PROJECT

- » The main infrastructure associated with the facility includes the following:
  - Gas turbines
  - \* Heat recovery steam generators (HRSG)
  - \* Steam turbines
  - \* Condensers
  - \* Bypass stacks and Exhaust stacks
  - \* A water pipeline, water tank and water treatment plant
  - \* Dry-cooled system or Once-Through-Cooling system technology
  - \* Closed Fin-fan coolers
  - Diesel off-loading facility and storage tanks.
  - Ancillary infrastructure (warehousing and buildings, storage facilities, generators and 132kV and 400kV switchyards)
  - \* Access Roads
  - \* A gas pipeline (will be assessed through a separate EIA process)
  - Power lines (will be assessed through a separate EIA process)

# TYPICAL COMBINED CYCLE GAS TURBINE POWER PLANT

## RICHARDS BAY CCPP PROJECT

- » To be operated on natural gas piped to site with diesel as back-up
  - Natural gas piped via a gas pipeline from the Richards Bay Harbour (not part of the scope of work will be under a separate application)
- » Site selected based on the following considerations:
  - Technical criteria, including availability of the site for development, proximity to port, size of site, proximity to grid connection
  - Environmental criteria, including sensitive social and biophysical features

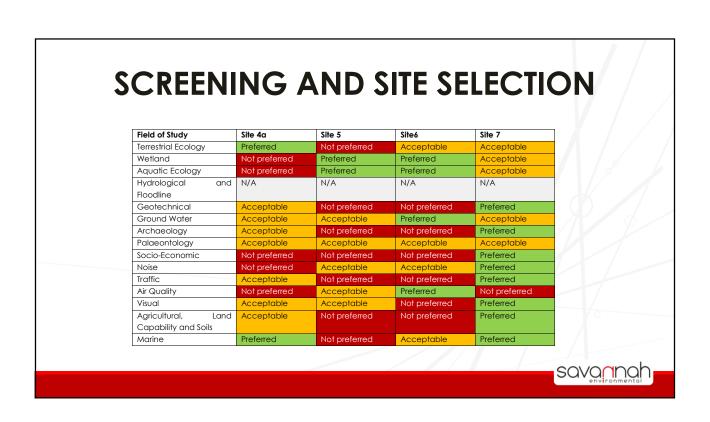

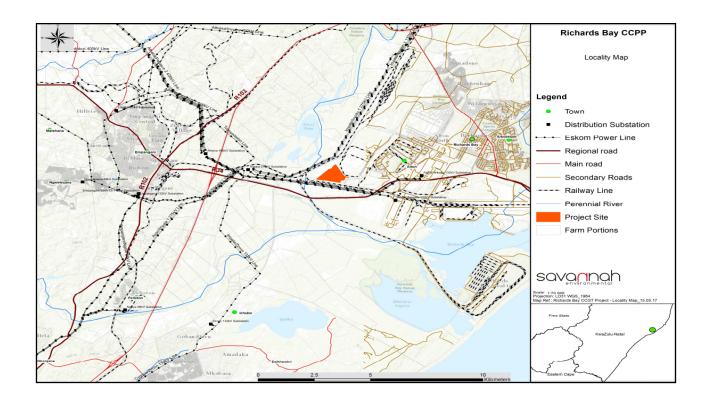

## **SCREENING AND SITE SELECTION**

- » Eskom identified 6 potential sites
- » Technical and landowner issues reduced potential sites to 4
- » Environmental screening study undertaken on 4 potential sites
- » Specialist input included in screening study
- » 'Funnel-Down' Approach
  - \* Avoidance
  - \* Minimisation
  - \* Remedy

## **EIA PROCESS**

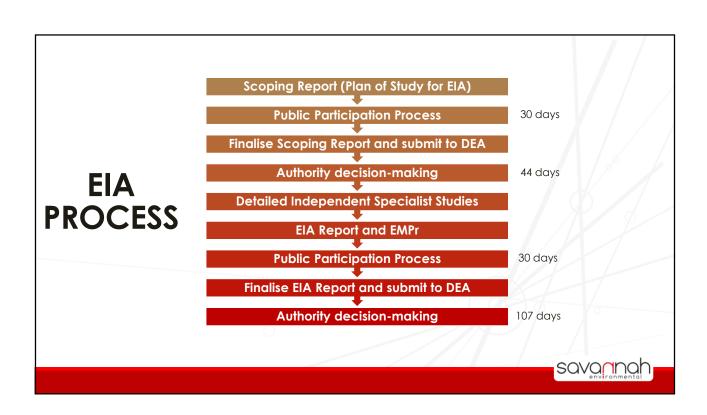

- » National Environmental Management Act (No 107 of 1998)
- » Application for Environmental Authorisation submitted under the EIA Regulations, 2014
- » Competent Authority National Department of Environmental Affairs (DEA)
- » Commenting Authority KwaZulu-Natal Department of Economic Development, Tourism and Environmental Affairs (EDTEA)

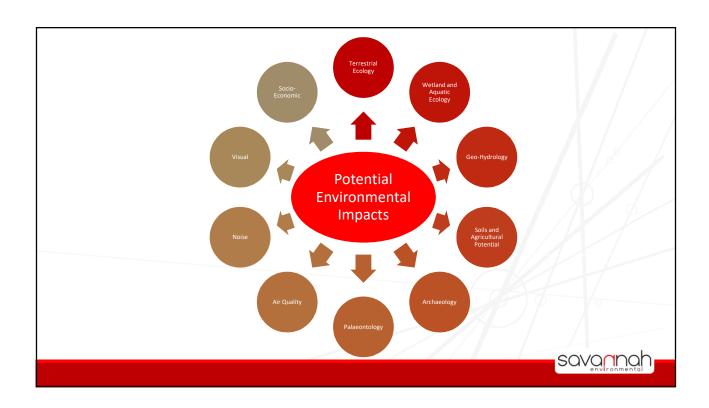

#### **OTHER PERMITS**

- » Application for an Atmospheric Emissions License (AEL) will be applied for by Eskom only once a decision has been issued by the DEA
- The Water Use License (WUL) will be applied for during the EIA Phase
- » Other permits will be identified during the EIA Phase

# **INDEPENDENT SPECIALIST STUDIES**

Study	Specialist
Terrestrial Ecology	Afzelia Environmental Consultants
Wetland and Aquatic Ecology	Afzelia Environmental Consultants
Geo-Hydrology	Afzelia Environmental Consultants
Soils and Agricultural Potential	Afzelia Environmental Consultants
Archaeology	Heritage Contracts and Archaeological Assessments
Palaeontology	National Museum of Bloemfontein
Air Quality	AirShed Planning Professionals
Noise	Enviro Acoustic Research cc
Visual	Afzelia Environmental Consultants
Socio-Economic	Urban Econ Development Economists

## FINDINGS AND CONCLUSIONS

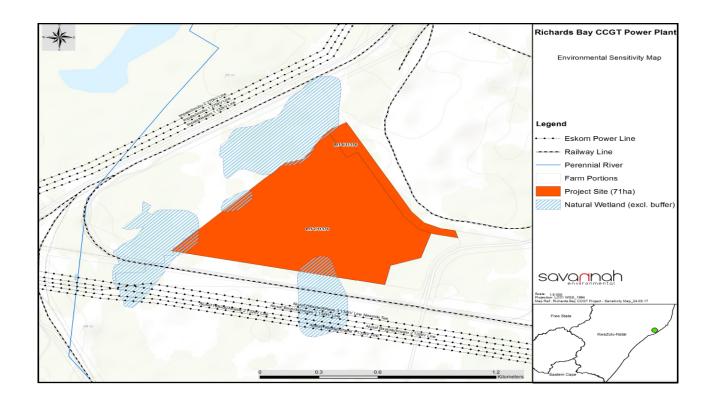

- » Impact on sensitive ecological features, i.e. CBA, loss of endangered ecosystem and loss of protected species
- » Loss of wetlands and altered hydrology and geohydrology
- » Risk for soil erosion
- » Potential damage to archaeological sites
- » Potential loss of palaeontological heritage, however no fossiliferous outcrops were found in the project site

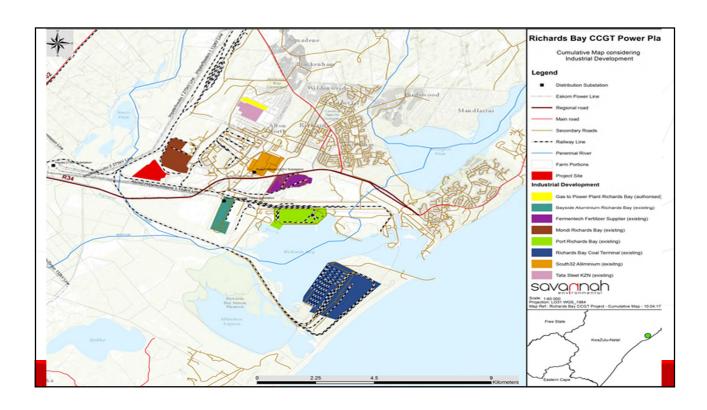

#### FINDINGS AND CONCLUSIONS

- » Elevated daily PM10 concentrations and NOX, CO, and VOCs to the existing baseline concentrations
- » Production of Greenhouse Gases
- » Increased noise levels
- » Employment opportunities
- Climate change and traffic impacts will be assessed during EIA. An MHI will also be conducted and form part of the EIAr
- » Cumulative impacts

## **WAY FORWARD**

- » Review period of the Scoping Report: 21 August 2017 – 20 September 2017
- » Written comments or questions to be submitted by the 20 September 2017
- » Minute any issues / concerns from I&APs from the meetings
- » Incorporate issues and concerns raised during the Public Participation Process into the Final Scoping Report
- » Submit Final Scoping Report to DEA for approval
