Good day Madre,

Your abstraction of 150m3 per day is fine.
Attached detail of the position of the dam 35 extraction point.

Subject: REQUEST FOR WATER: Eskom project on Sere Wind Farm

Good day Johan

Further to our previous communication, Eskom updated their water supply needs and requests that LORWUA confirm the following (as per attached letter):

- Water Quantities required for construction is estimated at 150m³per day.
- Please advise the Extraction Coordinates.
- Dam Location and availability of Water during construction of the BESS.

Kind regards

Good day Johan

Thank you very much for your response.

At the moment we are busy undertaking the Environmental Impact Assessment for the proposed development. The construction programme and water usage projection will only be available once the Contractor for the construction phase has been appointed. For commercial purposes, Eskom wanted to know if water will be available from LORWUA or if we need to indicate to the Contractor that water should be sourced from an alternative supply.

Thank you for your assistance. I will be in touch again.

Kind regards

Dear Madre,

Your water use sounds a bit high for what you explained to me what is going to happen on site. Yes, it is possible to supply 500m³ (50-60 big water trucks per day) of water in dam K35 in Koekenaap. Your construction program and weekly water use will be of great help to plan this. From May to September we do maintenance work on the main canals and the water will only be put into the dam every third week. This can create a shortfall.

Regards,

Johan Matthee

Subject: REQUEST FOR WATER: Eskom project on Sere Wind Farm

Good day Mr J Matthee

Your meeting with Mr Willem Vermeulen from Eskom Customer Network Centre In Vredendal on Friday, 17 May 2019, refers.

Eskom proposes to undertake a development on the Eskom Sere Windfarm outside the town of Koekenaap in the year 2020. Construction water is required for various construction activities that will be undertaken. As such, Eskom would like to apply for water abstraction/ usage from the Lower Olifants River Water Users Association.

Kindly confirm if water will be available and if so will LORWUA be able to supply up to 500m³ per day? During which months would the water be available and at what price?

Final arrangements can be made closer to the construction start which is anticipated in March/ April 2020.

Looking forward to your response.

Kind regards
